Following the decisions of the Supreme Court of Canada (Labour Gazette, July, 1936, pages 585-600) on the references submitted to it concerning the constitutional validity of eight statutes comprising the social legislation enacted during the 1934 and 1935 sessions of the Dominion Parliament, appeals were made to the Judicial Committee of the Privy Council for a final determination as to whether these measures are *ultra vires* of the Parliament of Canada.

The statutes submitted to the Privy Council were as follows:

The Weekly Rest in Industrial Undertakings Act;

The Minimum Wages Act;

The Limitation of Hours of Work Act;

The Employment and Social Insurance Act;

The Natural Products Marketing Act, 1934, and the Natural Products Marketing Act Amendment Act, 1935;

The Farmers' Creditors Arrangement, Act, 1934, and the Farmers' Creditors Arrangement Act Amendment Act, 1935;

The Dominion Trade and Industry Commission Act;

Section 498A of the Criminal Code.

The Judicial Committee of the Privy Council delivered its judgments on January 28, and on that date Hon. Ernest Lapointe, Minister of Justice, announced the decisions in the House of Commons.

Briefly summarized, the decisions of the Privy Council were as follows:

Weekly Rest in Industrial Undertakings, Minimum Wages, and Limitation of Hours. — In the matter of these three statutes based on International Labour Conventions (Labour Gazette, July 1935, pages 620-23), the Judicial Committee distinguished between the formation and the performance of obligations constitued by a treaty. The National Government may decide to incur obligations of a treaty which require changes in the law but such changes can be made only by a legislative body with power under the B.N.A. Act to legislate on the subject matter of the treaty.

Their Lordships held that section 132 of the B.N.A. Act did not apply to the case since the obligations incurred by the Dominion Government in ratifying the conventions "are not obligations of Canada as part of the British Empire." Section 132 gives to the Parliament and Government of Canada "all powers necessary or proper for performing the obligations of Canada or of any province thereof, as part of the British Empire, towards foreign countries arising under treaties between the Empire and such foreign countries."

The only question to be determined, then, was as to the competent legislative authority in the matter of wages, hours and a weekly rest day. Since these subjects come within the class assigned exclusively to the provinces under the head, "property and civil rights in the province," the competent legislative authorities were the provincial legislatures.

The Supreme Court of Canada divided equally on this legislation, three members of the Court, including the Chief Justice, upholding the validity of the statutes, while the other three considered that they were invalid.

32077—8½

The Employment and Social Insurance Act. — In the judgment of the Judicial Committee of the Privy Council, this legislation, which provided for the establishment of a contributory system of unemployment insurance, a national employment service and other forms of social insurance (LABOUR GAZETTE, July, 1935, pages 617-20), was *ultra vires* of the Dominion Parliament. This decision sustained the majority opinion of the Supreme Court of Canada on this enactment. In the Supreme Court judgment, the Chief Justice, and Davis J. were of the opinion that the statute was *intra vires* of the Parliament of Canada, but Rinfret, Cannon, Crocket and Kerwin JJ. held that it was *ultra vires.*

The Natural Products Marketing Act. — This Act (LABOUR GAZETTE, April, 1934, page 304) and its amending measure provided for the creation of a Dominion Marketing Board with wide powers of control and regulation. It was found *ultra vires* by the Privy Council, sustaining a similar and unanimous judgment of the Supreme Court of Canada.

The Farmers' Creditors Arrangement Act. — In the opinion of the Chief Justice and the majority of the members of the Supreme Court of Canada this legislation and its amendment were found to be *intra vires,* and the Privy Council also declared it constitutionally valid. The Act of 1935 provided an arrangement for the settlement of debts between farmers and their creditors under a Board (LABOUR GAZETTE, June, 1934, page 492).

Dominion Trade and Industry Commission Act. — The sections of the Dominion Trade and Industry Commission Act, 1935 (LABOUR GAZETTE, July, 1935, page 624), on which the decisions of the Supreme Court of Canada were appealed to the Privy Council were found to be constitutionally valid. Section 14 of this Act was found to be invalid by unanimous judgment of the Supreme Court of Canada and no appeal was made to the Privy Council on this section, which had been designed to provide that selected agreements for the control and regulation of prices by persons engaged in any industry might be approved by the Governor in Council on the recommendation of the Trade and Industry Commission, and that anything done thereafter in carrying out such agreements would be exempted from prosecutions under the Combines Investigation Act and under certain sections of the Criminal Code, except when the Trade and Industry Commission consented that such prosecutions might be instituted. Sections 18 and 19 of the Act, making provision for a "Canada Standard" trade mark (which were held *ultra vires* by the Supreme Court) were declared constitutionally valid by the Privy Council.

Section 498A of the Criminal Code.—Enacted in 1935, this section, which made it an indictable offence to discriminate in price in certain ways between purchasers of goods, or to engage in a policy of selling goods at unreasonably low prices for the purpose of destroying competition or of eliminating a competitor, was held by the Privy Council to be within the legislative powers of the Dominion Parliament. This decision of the Privy Council on Section 498A sustained the judgment of the majority of the members of the Supreme Court.

TEXTS OF JUDGMENTS

The texts of the judgments delivered by the Judicial Committee of the Privy Council were as follows:

Privy Council Appeal No. 100 *of* 1936

The Attorney-General of Canada - - - - - *Appellant*

v.

The Attorney-General of Ontario and others - - - *Respondents*

In the matter of a Reference as to whether The Weekly Rest in Industrial Undertakings Act; The Minimum Wages Act and The Limitation of Hours of Work Act of the Statutes of Canada, 1935, *are* ultra vires *of the Parliament of Canada.*

FROM

THE SUPREME COURT OF CANADA

JUDGMENT OF THE LORDS OF THE JUDICIAL COMMITTEE OF THE PRIVY COUNCIL, DELIVERED THE 28TH JANUARY, 1937

Present at the Hearing:

LORD ATKIN.
LORD THANKERTON.
LORD MACMILLAN.
LORD WRIGHT (Master of the Rolls).
SIR SIDNEY ROWLATT.

[*Delivered by* LORD ATKIN.]

This is one of a series of cases brought before this Board on appeal from the Supreme Court of Canada on references by the Governor-General in Council to determine the validity of certain statutes of Canada passed in 1934 and 1935. Their Lordships will deal with all the appeals in due course, but they propose to begin with that involving The Weekly Rest in Industrial Undertakings Act, The Minimum Wages Act and The Limitation of Hours of Work Act, both because of the exceptional importance of the issues involved, and because it affords them an opportunity of stating their opinion upon some matters which also arise in the other cases. At the outset they desire to express their appreciation of the valuable assistance which they have received from counsel, both for the Dominion and for the respective Provinces. No pains have been spared to place before the Board all the material both as to the facts and the law which could assist the Board in their responsible task. The arguments were cogent and not diffuse. The statutes in question in the present case were passed, as their titles recite, in accordance with conventions adopted by the International Labour Organisation of the League of Nations in accordance with the Labour Part of the Treaty of Versailles of 28th June, 1919. It was admitted at the bar that each statute affects property and civil rights within each Province; and that it was for the Dominion to establish that nevertheless the statute was validly enacted under the legislative powers given to the Dominion Parliament by the B.N.A. Act, 1867. It was argued for the Dominion that the legislation could be justified either (1) under section 132 of the B.N.A. Act as being legislation "necessary or proper for performing the obligations of Canada or any Province thereof as part of the British

Empire towards foreign countries arising under treaties between the Empire and such foreign countries" or (2) under the general powers, sometimes called the residuary powers, given by section 91 to the Dominion Parliament to make laws for the peace, order and good government of Canada in relation to all matters not coming within the classes of subjects by this Act assigned exclusively to the legislatures of the Provinces.

The Provinces contended:—

As to (1)—

(*a*) That the obligations, if any, of Canada under the labour conventions did not arise under a treaty or treaties made between the Empire and foreign countries: and that therefore section 132 did not apply.

(*b*) That the Canadian Government had no executive authority to make any such treaty as was alleged.

(*c*) That the obligations said to have been incurred and the legislative powers sought to be exercised by the Dominion were not incurred and exercised in accordance with the terms of the Treaty of Versailles.

And as to (2) that if the Dominion had to rely only upon the powers given by section 91, the legislation was invalid, for it related to matters which came within the classes of subjects exclusively assigned to the legislatures of the Provinces, viz., property and civil rights in the Province.

In order to indicate the opinion of the Board upon these contentions it will be necessary briefly to refer to the Treaty of Versailles, Part XIII, Labour: to the procedure prescribed by it for bringing into existence labour conventions: and to the procedure adopted in Canada in respect thereto. The Treaty of Peace signed at Versailles on 28th June, 1919, was made between the Allied and Associated Powers of the one part and Germany of the other part. The British Empire was described as one of the Principal Allied and Associated Powers, and the High Contracting Party for the British Empire was His Majesty the King, represented generally by certain of his English Ministers and represented for the Dominion of Canada by the Minister of Justice and the Minister of Customs, and for the other Dominions by their respective Ministers. The treaty began with Part I of the covenant of the League of Nations by which the high contracting parties agreed to the covenant, the effect of which was that the signatories named in the annex to the covenant were to be the original members of the League of Nations. The Dominion of Canada was one of the signatories and so became an original member of the League. The treaty then proceeds in a succession of parts to deal with the agreed terms of peace, stipulations of course entered into not between members of the League but between the high contracting parties, i.e., for the British Empire His Majesty the King. Part XIII entitled "Labour," after reciting that the object of the League of Nations is the establishment of universal peace, and such a peace can only be established if it is based on social justice and that social justice requires the improvement of conditions of labour throughout the world provides that the high contracting parties agree to the establishment of a permanent organisation for the promotion of the desired objects and that the original and future members of the League of Nations shall be the members of this organisation. The organisation is to consist of a general conference of representatives of the members and an International Labour Office. After providing for meetings of the conference and for its procedure the treaty contains articles 405 and 407:—

"ARTICLE 405.

"(1) When the Conference has decided on the adoption of proposals with regard to an item in the agenda, it will rest with the Conference to determine whether these proposals should take the form: (*a*) of a recommendation to be submitted to the

Members for consideration with a view to effect being given to it by national legislation or otherwise, or (*b*) of a draft international convention for ratification by the Members.

"(2) In either case a majority of two-thirds of the votes cast by the Delegates present shall be necessary on the final vote for the adoption of the recommendation or draft convention, as the case may be, by the Conference.

"(3) In framing any recommendation or draft convention of general application the Conference shall have due regard to those countries in which climatic conditions, the imperfect development of industrial organisation or other special circumstances make the industrial conditions substantially different and shall suggest the modifications, if any, which it considers may be required to meet the case of such countries.

"(4) A copy of the recommendation or draft convention shall be authenticated by the signature of the President of the Conference and of the Director and shall be deposited with the Secretary-General of the League of Nations. The Secretary-General will communicate a certified copy of the recommendation or draft convention, to each of the Members.

"(5) Each of the Members undertakes that it will, within the period of one year at most from the closing of the session of the Conference, or if it is impossible owing to exceptional circumstances to do so within the period of one year, then at the earliest practicable moment and in no case later than eighteen months from the closing of the session of the Conference bring the recommendation or draft convention before the authority or authorities within whose competence the matter lies, for the enactment of legislation or other action.

"(6) In the case of a recommendation, the Members will inform the Secretary-General of the action taken.

"(7) In the case of a draft convention, the Member will, if it obtains the consent of the authority or authorities within whose competence the matter lies, communicate the formal ratification of the convention to the Secretary-General and will take such action as may be necessary to make effective the provisions of such convention.

"(8) If on a recommendation no legislative or other action is taken to make a recommendation effective, or if the draft convention fails to obtain the consent of the authority or authorities within whose competence the matter lies, no further obligation shall rest upon the Member.

"(9) In the case of a federal State, the power of which to enter into conventions on labour matters is subject to limitations, it shall be in the discretion of that Government to treat a draft convention to which such limitations apply as a recommendation only, and the provisions of this Article with respect to recommendations shall apply in such case.

"(10) The above Article shall be interpreted in accordance with the following principle:—

"In no case shall any Member be asked or required, as a result of the adoption of any recommendation or draft convention by the Conference, to lessen the protection afforded by its existing legislation to the workers concerned.

"ARTICLE 407.

"If any convention coming before the Conference for final consideration fails to secure the support of two-thirds of the votes cast by the Delegates present, it shall nevertheless be within the right of any of the Members of the Permanent Organisation to agree to such convention among themselves.

"Any convention so agreed to shall be communicated by the Government concerned to the Secretary-General of the League of Nations, who shall register it."

It will be observed that a draft convention is adopted by a majority of two-thirds of the delegates present: and that at the stage of adoption it has no binding effect on the members: nor do the delegates of members sign it or purport to enter into an obligation on behalf of the members whose delegates they are. "Ratification," therefore, as used in paragraph 7 of Article 405 is not used in the ordinary sense in which it is used in respect of treaties, the formal adoption by the high contracting party of a previous assent conveyed by the signature of so-called plenipotentiaries. "Consent to" or "accession to" would perhaps better describe the transaction which involves the creation for the first time of any obligation under the convention.

In accordance with the provisions of Part XIII draft conventions were adopted by general conferences of the International Labour Organisation as follows:—

29th October-29th November, 1919, Conference.
Draft Convention limiting the Hours of Work in Industrial Undertakings.
25th October-19th November, 1921, Conference.
Draft Convention concerning the Application of the Weekly Rest in Industrial Undertakings.
30th May-16th June, 1928, Conference.
Draft Convention concerning the creation of Minimum Wage Fixing Machinery.

Each of the conventions included stipulations purporting to bind members who ratified it to carry out its provisions, the first two conventions by named dates, viz., 1st July, 1921, and 1st January, 1924, respectively. These three conventions were in fact ratified by the Dominion of Canada, Hours of Work on 1st March, 1935, Weekly Rest on 1st March, 1935, and Minimum Wages on 12th April, 1935.

In each case in February and March, 1935, there had been passed resolutions of the Senate and House of Commons of Canada approving them. The ratification was approved by order of the Governor-General in Council, was recorded in an instrument of ratification executed by the Secretary of State for External Affairs for Canada, Mr. Bennett, and was duly communicated to the Secretary-General of the League of Nations. The statutes which in substance give effect to the draft conventions, were passed by the Parliament of Canada and received the Royal Assent, "Hours of Work" on 5th July, 1935, to come into force three months after assent; "Weekly Rest," on 4th April, 1935, to come into force three months after assent; "Minimum Wage," on 28th July, 1935, to come into force, so far as the convention provisions are concerned, when proclaimed by the Governor in Council, an event which has not yet happened. In 1925 the Governor-General in Council referred to the Supreme Court questions as to the obligations of Canada under the provisions of Part XIII of the Treaty of Versailles and as to whether the legislatures of the Provinces were the authorities within whose competence the subject-matter of the conventions lay. The answers to the reference, which are to be found in 1925 S.C.R. 505, were that the legislatures of the Provinces were the competent authorities to deal with the subject-matter, save in respect of Dominion servants, and the parts of Canada not within the boundaries of any Province: and that the obligation of Canada was to bring the convention before the Lieutenant-Governor of each Province to enable him to bring the appropriate subject-matter before the legislature of his Province, and to bring the matter before the Dominion Parliament in respect of so much of the convention as was within their competence. This advice appears to have been accepted, and no further steps were taken until those which took place as stated above in 1935.

Their Lordships, having stated the circumstances leading up to the reference in this case, are now in a position to discuss the contentions of the parties which were summarised earlier in this judgment. It will be essential to keep in mind the distinction between (1) the formation, (2) the performance, of the obligations constituted by a treaty, using that word as comprising any agreement between two or more sovereign States. Within the British Empire there is a well-established rule that the making of a treaty is an executive act, while the performance of its obligations, if they entail alteration of the existing domestic

law, requires legislative action. Unlike some other countries the stipulations of a treaty duty ratified do not within the Empire, by virtue of the treaty alone, have the force of law. If the national executive, the government of the day, decide to incur the obligations of a treaty which involve alteration of law they have to run the risk of obtaining the assent of Parliament to the necessary statute of statutes. To make themselves as secure as possible they will often in such cases before final ratification seek to obtain from Parliament an expression of approval. But it has never been suggested, and it is not the law, that such an expression of approval operates as law, or that in law it precludes the assenting Parliament or any subsequent Parliament from refusing to give its sanction to any legislative proposals that may subsequently be brought before it. Parliament, no doubt, as the Chief Justice points out, has a constitutional control over the executive: but it cannot be disputed that the creation of the obligations undertaken in treaties and the assent to their form and quality are the function of the executive alone. Once they are created, while they bind the State as against the other contracting parties, Parliament may refuse to perform them and so leave the State in default. In a unitary State whose legislature possesses unlimited powers the problem is simple. Parliament will either fulfil or not treaty obligations imposed upon the State by its executive. The nature of the obligations does not affect the complete authority of the legislature to make them law if it so chooses. But in a State where the legislature does not possess absolute authority: in a federal State where legislative authority is limited by a constitutional document: or is divided up between different legislatures in accordance with the classes of subject-matter submitted for legislation, the problem is complex. The obligations imposed by treaty may have to be performed, if at all, by several legislatures: and the executive have the task of obtaining the legislative assent not of the one Parliament to whom they may be responsible: but possibly of several Parliaments to whom they stand in no direct relation. The question is not how is the obligation formed, that is the function of the executive: but how is the obligation to be performed and that depends upon the authority of the competent legislature or legislatures.

Reverting again to the original analysis of the contentions of the parties it will be seen that the Provincial contention 1 (*b*) relates only to the formation of the treaty obligation while 1 (*c*) has reference to the alleged limitation of both executive and legislative action by the express terms of the treaty. If, however, the Dominion Parliament was never vested with legislative authority to perform the obligation these questions do not arise. And as their Lordships have come to the conclusion that the reference can be decided upon the question of legislative competence alone, in accordance with their usual practice in constitutional matters they refrain from expressing any opinion upon the questions raised by the contentions 1 (*b*) and (*c*), which in that event become immaterial. Counsel did not suggest any doubt as to the international status which Canada had now attained, involving her competence to enter into international treaties as an international juristic person. Questions were raised both generally as to how the executive power was to be exercised to bind Canada, whether it must be exercised in the name of the King, and whether the prerogative right of making treaties in respect of Canada, was now vested in the Governor-General in Council, or his Ministers, whether by constitutional usage or otherwise, and specifically in relation to the draft conventions as to the interpretation of the various paragraphs in Article 405 of the Treaty of Versailles and as to the effect of the time limits expressed both in Article 405 and in the conventions themselves. Their Lordships mention these points for the purpose of making it clear that they express no opinion upon them.

The first ground upon which counsel for the Dominion sought to base the validity of the legislation was section 132. So far as it is sought to apply this section to the conventions when ratified the answer is plain. The obligations are not obligations of Canada as part of the British Empire, but of Canada, by virtue of her new status as an international person, and do not arise under a treaty between the British Empire and foreign countries. This was clearly established by the decision in the *Radio* case [1932] A.C. 304, and their Lordships do not think that the proposition admits of any doubt. It is unnecessary, therefore, to dwell upon the distinction between legislative powers given to the Dominion to perform obligations imposed upon Canada as part of the Empire by an Imperial executive responsible to and controlled by the Imperial Parliament, and the legislative power of the Dominion to perform obligations created by the Dominion executive responsible to and controlled by the Dominion Parliament. While it is true, as was pointed out in the *Radio* case, that it was not contemplated in 1867 that the Dominion would possess treaty making powers; it is impossible to strain the section so as to cover the uncontemplated event. A further attempt to apply the section was made by the suggestion that while it does not apply to the conventions, yet it clearly applies to the Treaty of Versailles itself, and the obligations to perform the conventions arise "under" that treaty because of the stipulations in Part XIII. It is impossible to accept this view. No obligation to legislate in respect of any of the matters in question arose until the Canadian executive, left with an unfettered discretion of their own volition, acceded to the conventions, a *novus actus* not determined by the treaty. For the purposes of this legislation the obligation arose under the conventions alone. It appears that all the members of the Supreme Court rejected the contention based on section 132 and their Lordships are in full agreement with them.

If, therefore, section 132 is out of the way the validity of the legislation con only depend upon sections 91 and 92. Now it had to be admitted that normally this legislation came within the classes of subjects by section 92 assigned exclusively to the legislatures of the Provinces, viz., property and civil rights in the Province. This was in fact expressly decided in respect of these same conventions by the Supreme Court in 1925. How then can the legislation be within the legislative powers given by section 91 to the Dominion Parliament? It is not within the enumerated classes of subjects in section 91: and it appears to be expressly excluded from the general powers given by the first words of the section. It appears highly probable that none of the members of the Supreme Court would have departed from their decision in 1925 had it not been for the opinion of the Chief Justice that the judgments of the Judicial Committee in the *Aeronautics* case and the *Radio* case constrained them to hold that jurisdiction to legislate for the purpose of performing the obligation of a treaty resides exclusively in the Parliament of Canada. Their Lordships cannot take this view of those decisions. The *Aeronautics* case [1932] A.C. 54, concerned legislation to perform obligations imposed by a treaty between the Empire and foreign countries. Section 132 therefore clearly applied: and but for a remark at the end of the judgment, which in view of the stated ground of the decision was clearly obiter, the case could not be said to be an authority on the matter now under discussion. The judgment in the *Radio* case (*supra*) appears to present more difficulty. But when that case is examined it will be found that the true ground of the decision was that the convention in that case dealt with classes of matters which did not fall within the enumerated classes of subjects in section 92 or even within the enumerated classes in section 91. Part of the subject-matter of the convention, namely, broadcasting, might come under an enumerated class but if so it was under a heading "Inter-provincial

Telegraphs," expressly excluded from section 92. Their Lordships are satisfied that neither case affords a warrant for holding that legislation to perform a Canadian treaty is exclusively within the Dominion legislative power.

For the purposes of sections 91 and 92, i.e., the distribution of legislative powers between the Dominion and the Provinces, there is no such thing as treaty legislation as such. The distribution is based on classes of subjects: and as a treaty deals with a particular class of subjects so will the legislative power of performing it be ascertained. No one can doubt that this distribution is one of the most essential conditions, probably the most essential condition, in the inter-provincial compact to which the B.N.A. Act gives effect. If the position of Lower Canada, now Quebec, alone were considered, the existence of her separate jurisprudence as to both property and civil rights might be said to depend upon loyal adherence to her constitutional right to the exclusive competence of her own legislature in these matters. Nor is it of less importance for the other Provinces, though their law may be based on English jurisprudence, to preserve their own right to legislate for themselves in respect of local conditions which may vary by as great a distance as separates the Atlantic from the Pacific. It would be remarkable that while the Dominion could not initiate legislation however desirable which affected civil rights in the Provinces, yet its Government not responsible to the Provinces nor controlled by Provincial Parliaments need only agree with a foreign country to enact such legislation: and its Parliament would be forthwith clothed with authority to affect Provincial rights to the full extent of such agreement. Such a result would appear to undermine the constitutional safeguards of Provincial constitutional autonomy.

It follows from what has been said that no further legislative competence is obtained by the Dominion from its accession to international status, and the consequent increase in the scope of its executive functions. It is true, as pointed out in the judgment of the Chief Justice, that as the executive is now clothed with the powers of making treaties so the Parliament of Canada, to which the executive is responsible, has imposed upon it responsibilities in connection with such treaties, for if it were to disapprove of them they would either not be made or the Ministers would meet their constitutional fate. But this is true of all executive functions in their relation to Parliament. There is no existing constitutional ground for stretching the competence of the Dominion Parliament so that it becomes enlarged to keep pace with enlarged functions of the Dominion executive. If the new functions affect the classes of subjects enumerated in section 92 legislation to support the new functions is in the competence of the Provincial Legislatures only. If they do not, the competence of the Dominion Legislature is declared by section 91 and existed *ab origine*. In other words, the Dominion cannot merely by making promises to foreign countries clothe itself with legislative authority inconsistent with the constitution which gave it birth.

But the validity of the legislation under the general words of section 91 was sought to be established not in relation to the treaty making power alone, but also as being concerned with matters of such general importance as to have "attained such dimensions as to affect the body politic," and to have "ceased to be merely local or provincial and to have become matters of national concern." It is interesting to notice how often the words used by Lord Watson in *A.G. for Ontario* v. *A.G. for Canada* [1896] A.C. 348, have unsuccessfully been used in attempts to support encroachments on the Provincial legislative powers given by section 92. They laid down no principle of constitutional law, and were cautious words intended to safeguard possible eventualities which no one at the time had any interest or desire to define. The law of Canada on this branch of constitutional law has been stated with such force and clarity by the Chief Justice in his judgment in the reference concerning the Natural Products

Marketing Act, beginning at p. 65 of the record in that case and dealing with the six Acts there referred to, that their Lordships abstain from stating it afresh. The Chief Justice naturally from his point of view excepted legislation to fulfil treaties. On this their Lordships have expressed their opinion. But subject to this they agree with and adopt what was there said. They consider that the law is finally settled by the current of cases cited by the Chief Justice on the principles declared by him. It is only necessary to call attention to the phrases in the various cases, "abnormal circumstances," "exceptional conditions," "standard of necessity" (*Board of Commerce* case [1922] 1 A.C. 191), "some extraordinary peril to the national life of Canada," "highly exceptional," "epidemic of pestilence" (*Sniders* case [1925] A.C. 396), to show how far the present case is from the conditions which may over-ride the normal distribution of powers in sections 91 and 92. The few pages of the Chief Justice's judgment will, it is to be hoped, form the *locus classicus* of the law on this point, and preclude further disputes.

It must not be thought that the result of this decision is that Canada is incompetent to legislate in performance of treaty obligations. In totality of legislative powers, Dominion and Provincial together, she is fully equipped. But the legislative powers remain distributed and if in the exercise of her new functions derived from her new international status she incurs obligations they must, so far as legislation be concerned when they deal with provincial classes of subjects, be dealt with by the totality of powers, in other words, by co-operation between the Dominion and the Provinces. While the ship of state now sails on larger ventures and into foreign waters she still retains the watertight compartments which are an essential part of her original structure. The Supreme Court was equally divided and therefore the formal judgment could only state the opinions of the three Judges on either side. Their Lordships are of opinion that the answer to the three questions should be that the Act in each case is *ultra vires* of the Parliament of Canada, and they will humbly advise His Majesty accordingly.

Privy Council Appeal No. 101 of 1936

The Attorney-General of Canada - - - - *Appellant*

v.

The Attorney-General of Ontario and others - - - *Respondents*

In the matter of a Reference as to whether the Parliament of Canada had legislative jurisdiction to enact the Employment and Social Insurance Act of the Statutes of Canada, 1935

FROM

THE SUPREME COURT OF CANADA

JUDGMENT OF THE LORDS OF THE JUDICIAL COMMITTEE OF THE PRIVY COUNCIL, DELIVERED THE 28TH JANUARY, 1937

Present at the Hearing:

LORD ATKIN
LORD THANKERTON.
LORD MACMILLAN.
LORD WRIGHT (Master of the Rolls).
SIR SIDNEY ROWLATT.

[*Delivered by* LORD ATKIN.]

This is an appeal from the judgment of the Supreme Court delivered on 17th June, 1936, in the matter of a reference by the Governor-General in Council dated 5th November, 1935, asking whether the Employment and Social Insurance Act, 1935, was *ultra vires* of the Parliament of Canada. The majority of the Supreme Court, Rinfret, Cannon, Crocket and Kerwin JJ. answered the question in the affirmative, the Chief Justice and Davis J. dissenting. The Act in its preamble recited Article 23 of the Treaty of Peace, by which in the Covenant of the League of Nations the members of the League agreed that they would endeavour to maintain fair and humane conditions of labour (omitting, however, in the recital that this agreement was subject to and in accordance with the provisions of international conventions existing or hereafter to be agreed), and Article 427 of the said treaty, by which it was declared that the well-being, physical, moral and intellectual, of industrial wage earners, was of supreme international importance. It then recited that it was desirable to discharge the obligations to Canadian labour assumed under the provisions of the said treaty: and that it was essential for the peace, order and good government of Canada to provide for a national employment service and insurance against unemployment, &c. It consists of five Parts, Employment and Social Insurance Commission (sections 4-9), Employment Service (sections 10-14), Unemployment Insurance (sections 15-38), National Health (sections 39-41) and General (sections 42-48). In substance the Act provides for a system of compulsory unemployment insurance. Part I sets up a commission charged with administering the Act and obtaining information and making proposals to the Governor in Council for making provision for the assistance of persons during unemployment who would not be entitled to unemployment insurance benefit under Part III. Part II provides for the organisation by the commission of employment offices similar to the labour exchanges in the United Kingdom. Part III provides for unemployment insurance, while Part IV merely provides that the commission shall co-operate with other authorities in the Dominion or Provinces and shall collect information concerning any plan for providing medical care or compensation in cases of ill-

health. Part V provides for regulations and reports. There are three schedules. The first defines employment within the meaning of Part III and excepted employments which include employment in agriculture and forestry, in fishing, and in lumbering and logging. The second enacts the weekly rates of contribution and rules as to payment and recovery of contributions paid by employers on behalf of employed persons. The third enacts the rates of unemployment benefit and supplementary provisions concerning the payment of unemployment benefit.

The substance of the Act is contained in the sections constituting Part III. They set up a now familiar system of unemployment insurance under which persons engaged in employment as defined in the Act are insured against unemployment. The funds required for making the necessary payments are to be provided partly from money provided by Parliament, partly from contributions by employed persons and partly from contributions by the employers of those persons. The two sets of contributions are to be paid by revenue stamps. Every employed person and every employer is to be liable to pay contributions in accordance with the provisions of the second schedule, the employer being liable to pay both contributions in the first instance, recovering the employed persons' share by deduction from his wages, or if necessary in certain cases by action.

There can be no doubt that *prima facie* provisions as to insurance of this kind, especially where they affect the contract of employment, fall within the class of property and civil rights in the Province, and would be within the exclusive competence of the Provincial Legislature. It was sought, however, to justify the validity of Dominion legislation on grounds which their Lordships on consideration feel compelled to reject. Counsel did not seek to uphold the legislation on the ground of the treaty-making power. There was no treaty or labour convention which imposed any obligation upon Canada to pass this legislation, and the decision on this question in the reference on the three labour Acts does not apply. A strong appeal, however, was made on the ground of the special importance of unemployment insurance in Canada at the time of and for some time previous to the passing of the Act. On this point it becomes unnecessary to do more than to refer to the judgment of this Board in the reference on the three labour Acts and to the judgment of the Chief Justice in the Natural Products Marketing Act which on this matter the Board have approved and adopted. It is sufficient to say that the present Act does not purport to deal with any special emergency. It founds itself in the preamble on general world-wide conditions referred to in the Treaty of Peace: it is an Act whose operation is intended to be permanent: and there is agreement between all the members of the Supreme Court that it could not be supported upon the suggested existence of any special emergency. Their Lordships find themselves unable to differ from this view.

It only remains to deal with the argument which found favour with the Chief Justice and Davis J. that the legislation can be supported under the enumerated heads, 1 and 3 of section 91 of the B.N.A. Act, 1867. (1) The public debt and property, namely (3) The raising of money by any mode or system of taxation. Shortly stated the argument is that the obligation imposed upon employers and persons employed is a mode of taxation: that the money so raised becomes public property and that the Dominion have then complete legislative authority to direct that the money so raised, together with assistance from money raised by general taxation, shall be applied in forming an insurance fund and generally in accordance with the provisions of the Act.

That the Dominion may impose taxation for the purpose of creating a fund for special purposes and may apply that fund for making contributions in the public interest to individuals, corporations or public authorities could

not as a general proposition be denied. Whether in such an Act as the present, compulsion applied to an employed person to make a contribution to an insurance fund out of which he will receive benefit for a period proportionate to the number of his contributions is in fact taxation, it is not necessary finally to decide. It might seem difficult to discern how it differs from a form of compulsory insurance, or what the difference is between a statutory obligation to pay insurance premiums to the State, or to an insurance company. But assuming that the Dominion has collected by means of taxation a fund, it by no means follows that any legislation which disposes of it is necessarily within Dominion competence.

It may still be legislation affecting the classes of subjects enumerated in section 92, and, if so, would be *ultra vires*. In other words, Dominion legislation, even though it deals with Dominion property, may yet be so framed as to invade civil rights within the Province: or encroach upon the classes of subjects which are reserved to provincial competence. It is not necessary that it should be a colourable device, or a pretence. If on the true view of the legislation it is found that in reality in pith and substance the legislation invades civil rights within the Province or in respect of other classes of subjects otherwise encroaches upon the provincial field, the legislation will be invalid. To hold otherwise would afford the Dominion an easy passage into the provincial domain. In the present case their Lordships agree with the majority of the Supreme Court in holding that in pith and substance this Act is an insurance Act affecting the civil rights of employers and employed in each Province, and as such is invalid. The other parts of the Act are so inextricably mixed up with the insurance provisions of Part III that it is impossible to sever them. It seems obvious also that in its truncated form, apart from Part III, the Act would never have come into existence. It follows that the whole Act must be pronounced *ultra vires*, and in accordance with the view of the majority of the Supreme Court their Lordships will humbly advise His Majesty that this appeal be dismissed.

Privy Council Appeal No. 102 of 1936

The Attorney-General of British Columbia - - - *Appellant*

v.

The Attorney-General of Canada and others - - - *Respondents*

In the matter of a Reference as to whether the Parliament of Canada had legislative jurisdiction to enact Section 498a of The Criminal Code

FROM

THE SUPREME COURT OF CANADA

JUDGMENT OF THE LORDS OF THE JUDICIAL COMMITTEE OF THE PRIVY COUNCIL, DELIVERED THE 28TH JANUARY, 1937

Present at the Hearing:

LORD ATKIN.
LORD THANKERTON.
LORD MACMILLAN.
LORD WRIGHT (Master of the Rolls).
SIR SIDNEY ROWLATT.

[*Delivered by* LORD ATKIN]

This is an appeal from a judgment of the Supreme Court of Canada delivered on 17th June, 1936, on a reference by the Governor-General in Council dated 5th November, 1935, raising the question whether section 498A of the Criminal Code

is *ultra vires* of the Parliament of Canada. The Supreme Court unanimously held that subsections (*b*) and (*c*) were not *ultra vires*, and by a majority, the Chief Justice, Rinfret, Davis and Kerwin JJ., Cannon and Crocket JJ. dissenting, held that subsection (*a*) also was not *ultra vires*. The section 498A was introduced into the Criminal Code by section 9 of 25 & 26 G. 5. c. 56, the title of which is an Act to amend the Criminal Code:—

"Section 9. The said Act is further amended by inserting after section four hundred and ninety-eight the following section:—

"498A. Every person engaged in trade or commerce or industry is guilty of an indictable offence and liable to a penalty not exceeding one thousand dollars or to one month's imprisonment, or, if a corporation, to a penalty not exceeding five thousand dollars, who

"(*a*) is a party or privy to, or assists in, any transaction or sale which discriminates, to his knowledge, against competitors of the purchaser in that any discount, rebate or allowance is granted to the purchaser over and above any discount, rebate or allowance available at the time of such transaction to the aforesaid competitors in respect of a sale of goods of like quality and quantity;

"The provisions of this paragraph shall not, however, prevent a co-operative society returning to producers or consumers, or a co-operative wholesale society returning to its constituent retail members, the whole or any part of the net surplus made in its trading operations in proportion to purchases made from or sales to the society;

"(*b*) engages in a policy of selling goods in any area of Canada at prices lower than those exacted by such seller elsewhere in Canada, for the purpose of destroying competition or eliminating a competitor in such part of Canada;

"(*c*) engages in a policy of selling goods at prices unreasonably low for the purpose of destroying competition or eliminating a competitor."

Their Lordships agree with the Chief Justice that this case is covered by the decision of the Judicial Committee in the *Proprietary Articles* case [1931] A.C. 310. The decision in that case seems to be inconsistent with the ground of dissent of Crocket J. that subsection (*a*) lacks "the characteristic feature of crime, viz. the intent to do wrong." The basis of that decision is that there is no other criterion of "wrongness" than the intention of the legislature in the public interest to prohibit the act or omission made criminal. Cannon J. was of opinion that the prohibition cannot have been made in the public interest because it has in view only the protection of the individual competitors of the vendor. This appears to narrow unduly the discretion of the Dominion legislature in considering the public interest. The only limitation on the plenary power of the Dominion to determine what shall or shall not be criminal is the condition that Parliament shall not in the guise of enacting criminal legislation in truth and in substance encroach on any of the classes of subjects enumerated in section 92. It is no objection that it does in fact affect them. If a genuine attempt to amend the criminal law it may obviously affect previously existing civil rights. The object of an amendment of the criminal law as a rule is to deprive the citizen of the right to do that which apart from the amendment he could lawfully do. No doubt the plenary power given by section 91 (27) does not deprive the Provinces of their right under section 92 (15) of affixing penal sanctions to their own competent legislation. On the other hand there seems to be nothing to prevent the Dominion if it thinks fit in the public interest from applying the criminal law generally to acts and omissions which so far are only covered by provincial enactments. In the present case there seems to be no reason for supposing that the Dominion are using the criminal law as a pretence or pretext or that the legislature is in pith and substance only interfering with civil rights in the Province. Counsel for New Brunswick called the attention of the Board to the report of the Royal Commission on Price Spreads, which is

referred to in the order of reference. It probably would not be contended that the statement of the Minister in the order of reference that the section was enacted to give effect to the recommendations of the Royal Commission bound the Provinces or must necessarily be treated as conclusive by the Board. But when the suggestion is made that the legislation was not in truth criminal legislation, but was in substance merely an encroachment on the provincial field, the existence of the report appears to be a material circumstance. Their Lordships are in agreement with the decision of the majority of the Supreme Court. They are of opinion that no part of the section is *ultra vires:* and they will humbly advise His Majesty that this appeal should be dismissed.

The Attorney-General of British Columbia - - - *Appellant*

v.

The Attorney-General of Canada and others - - - *Respondents*

In the matter of a Reference as to whether the Parliament of Canada had legislative jurisdiction to enact The Natural Products Marketing Act, 1934, and its amending Act The Natural Products Marketing Act Amendment Act, 1935,

FROM

THE SUPREME COURT OF CANADA

JUDGMENT OF THE LORDS OF THE JUDICIAL COMMITTEE OF THE PRIVY COUNCIL, DELIVERED the 28th JANUARY, 1937

Present at the hearing:

LORD ATKIN.
LORD THANKERTON.
LORD MACMILLAN.
LORD WRIGHT (Master of the Rolls).
SIR SIDNEY ROWLATT.

[*Delivered by* LORD ATKIN.]

This is an appeal from the Supreme Court on a reference by the Governor-General in Council dated 5th November, 1935, raising the question whether the Natural Products Marketing Act, 1934, as amended by the Natural Products Marketing Act Amendment Act, 1935, is *ultra vires* of the Parliament of Canada. The Supreme Court unanimously answered the question in the affirmative.

The Act consists of two parts. The first provides for the establishment of a Dominion Marketing Board whose powers include powers to regulate the time and place at which and the agency through which natural products to which an approved scheme relates shall be marketed and to determine the manner of distribution and the quantity, quality, grade or class of the product that shall be marketed by any person at any time and to prohibit the marketing of any of the regulated products of any grade, quality or class.

There are other regulatory powers which need not be further specified. A scheme to regulate the marketing of a natural product is initiated by a representative number of persons engaged in the production or marketing of the natural product. It can be referred by the appropriate Minister to the Board and if they approve the scheme as submitted or amended by them and it is further approved by the Minister the Governor-General in Council may approve

the scheme. It is essential that the Governor-General in Council shall be satisfied either that the principal market for the natural product is outside the province of production or that some part of the product produced may be exported. The latter provision makes it clear that the regulation may apply to marketing transactions in natural products which have nothing to do with foreign export or inter-provincial trade. If the Minister is satisfied that trade and commerce in a natural product are injuriously affected by the absence of a scheme prepared as above he may himself propose a scheme for approval of the Governor in Council. The Governor in Council is given power by order or regulation to regulate or restrict importation into Canada of a natural product which enters Canada in competition with a regulated product: and to regulate or restrict the exportation from Canada of any natural product. Part II contains provision for the appointment by the Minister of a Committee who may be entrusted with the duty of investigating all matters connected with the production or marketing of natural or regulated products for the purpose of ascertaining the charges made in distribution of a natural or regulated product. The receipt against the interest of the public of an excessive charge is made an indictable offence and there are provisions for the trial of such offences.

There can be no doubt that the provisions of the Act cover transactions in any natural product which are completed within the province, and have no connection with inter-provincial or export trade. It is therefore plain that the Act purports to affect property and civil rights in the province, and if not brought within one of the enumerated classes of subjects in section 91 must be beyond the competence of the Dominion Legislature. It was sought to bring the Act within the class (2) of section 91, namely The Regulation of Trade and Commerce. Emphasis was laid upon those parts of the Act which deal with inter-provincial and export trade. But the regulation of trade and commerce does not permit the regulation of individual forms of trade or commerce confined to the province. In his judgment the Chief Justice says:—

> "The enactments in question, therefore, in so far as they relate to matters which are in substance local and provincial are beyond the jurisdiction of Parliament. Parliament cannot acquire jurisdiction to deal in the sweeping way in which these enactments operate with such local and provincial matters by legislating at the same time respecting external and interprovincial trade and committing the regulation of external and interprovincial trade and the regulation of trade which is exclusively local and of traders and producers engaged in trade which is exclusively local to the same authority (*King v. Eastern Terminal Elevators* (1925) S.C.R. 434)."

Their Lordships agree with this; and find it unnecessary to add anything. There was a further attempt to support the Act upon the general powers to legislate for the peace, order and good government of Canada. Their Lordships have already dealt with this matter in their previous judgments in this series and need not repeat what is there said. The judgment of the Chief Justice in this case is conclusive against the claim for validity on this ground. In the result therefore there is no answer to the contention that the Act in substance invades the provincial field and is invalid. It was however urged before us that portions of the Act notably section 9 in the first part and the whole of part II are within the competence of Parliament. Section 9 because it only purports to deal with inter-provincial or export trade; and part II because it goes no further than the similar provisions in the Combines Investigation Act and is a genuine exercise of the Dominion legislative authority over criminal law. Reference was made to section 26 of the Act which is in these terms:—

> "If it be found that Parliament has exceeded its powers in the enactment of one or more of the provisions of this Act, none of the other or remaining provisions of the Act shall therefore be held to be inoperative or *ultra vires*, but the latter provisions shall stand as if they had been originally enacted as separate and independent enactments and as the only provisions of the Act; the intention of Parliament being to give independent effect to the extent of the powers to every enactment and provision in this Act contained."

It is said that this a plain indication of the intention of the legislature to pass any portion of the Act which might be valid in itself, in however truncated form the whole Act is left after rejecting the other portions. Moreover counsel for British Columbia urged the Board to make a declaration that it was only so far as authority was conferred on the Board to deal with local matters not necessarily ancillary to the main power that the Act was *ultra vires* and that the validity of each scheme must be determined as matters arise under it. No such declaration was asked for from the Supreme Court. British Columbia did not even appear at the hearing in Canada: and there is no claim for such a declaration in the case filed before this Board. It is of special importance in constitutional questions that this Board should if possible have the assistance of the opinion of the members of the Supreme Court: and as a general rule the Board will not be prepared in such cases to entertain claims for relief which have never been formulated in the Dominion Court. In no event therefore would they have acceded to the request for such a declaration as mentioned above. It does appear that the question of severability was raised in the factums of the Dominion and Ontario and their Lordships were told and of course accept the statement that this point was mentioned to the Supreme Court. It cannot, they think, have been emphasized, for the very careful judgment of the Court makes no mention of it. There appear to be two answers. In the first place it appears to their Lordships that the whole texture of the Act is inextricably interwoven and that neither section 9 nor part II can be contemplated as existing independently of the provisions as to the creation of a Board and the regulation of products. There are no separate and independent enactments to which section 26 could give a real existence. In the second place both the Dominion and British Columbia in their cases filed on this appeal assert that the sections now said to be severable are incidental and ancillary to the main legislation. Their Lordships are of opinion that this is true: and that as the main legislation is invalid as being in pith and substance an encroachment upon the provincial rights the sections referred to must fall with it as being in part merely ancillary to it. This relieves them from the task of deciding whether they would have been justified when dealing with constitutional issues of this importance in giving effect to arguments inconsistent with the reasons formally put before the Board in the filed cases of the respective parties.

The Board were given to understand that some of the Provinces attach much importance to the existence of marketing schemes such as might be set up under this legislation: and their attention was called to the existence of provincial legislation setting up provincial schemes for various provincial products. It was said that as the Provinces and the Dominion between them possess a totality of complete legislative authority, it must be possible to combine Dominion and provincial legislation so that each within its own sphere could in co-operation with the other achieve the complete power of regulation which is desired. Their Lordships appreciate the importance of the desired aim. Unless and until a change is made in the respective legislative functions of Dominion and Province it may well be that satisfactory results for both can only be obtained by co-operation. But the legislation will have to be carefully framed, and will not be achieved by either party leaving its own sphere and encroaching upon that of the other. In the present case their Lordships are unable to support the Dominion legislation as it stands. They will therefore humbly advise His Majesty that this appeal should be dismissed.

Privy Council Appeal No. 104 *of* 1936.

The Attorney-General of British Columbia - - - *Appellant*

v.

The Attorney-General of Canada and others - - - *Respondents*

In the Matter of a Reference as to whether the Parliament of Canada had legislative jurisdiction to enact the Farmers' Creditors Arrangement Act, 1934, as amended by the Farmers' Creditors Arrangement Act Amendment Act, 1935.

FROM

THE SUPREME COURT OF CANADA

JUDGMENT OF THE LORDS OF THE JUDICIAL COMMITTEE OF THE PRIVY COUNCIL, DELIVERED THE 28TH JANUARY, 1937

Present at the Hearing:

LORD ATKIN.
LORD THANKERTON.
LORD MACMILLAN.
LORD WRIGHT.
(MASTER OF THE ROLLS).
SIR SIDNEY ROWLATT.

[*Delivered by* LORD THANKERTON.]

This appeal by special leave challenges the constitutional validity of the Farmers' Creditors Arrangement Act, 1934, which was enacted by the Dominion Parliament as chapter 53 of the Statutes of Canada, 1934.

The following question was referred to the Supreme Court of Canada by the Governor-General in Council on the 18th November, 1935, namely:—

> "Is the Farmers' Creditors Arrangement Act, 1934, as amended by the Farmers' Creditors Arrangement Act Amendment Act 1935, or any of the provisions thereof, and in what particular or particulars or to what extent, *ultra vires* of the Parliament of Canada?"

Before the Supreme Court, the argument was presented by Counsel on behalf of the Attorney-General of Canada and on behalf of the Attorney-General of Ontario, Quebec, New Brunswick, British Columbia, Manitoba and Saskatchewan. On the 17th June, 1936, the judgment of the Supreme Court was delivered, and in the formal order the opinion of the Court is expressed as follows:—

> "The Chief Justice, Mr. Justice Rinfret, Mr. Justice Crocket, Mr. Justice Davis and Mr. Justice Kerwin are of the opinion that the statute is *intra vires;* Mr. Justice Cannon is of the opinion that the statute, except section 17, is *ultra vires* and that section 17 is *intra vires.*"

The Attorney-General of British Columbia now appeals against that judgment, and is supported by the respondent the Attorney-General of Ontario; the Attorney-General of Canada defends the judgment.

The appellant raises no question as to section 17 of the Act, which relates to interest and falls under head 19 of section 91 of the British North America Act of 1867, but he maintains that the rest of the Act, does not truly form legislation relating to "bankruptcy and insolvency," but is an invasion of the sphere of the Provincial Legislatures in relation to "property and civil rights in the province" or "matters of a merely local or private nature in the province," which is secured to them by heads 13 and 16 of the British North America Act.

The appellant submitted that the fundamental characteristic of legislation in relation to bankruptcy and insolvency is that it is conceived in the interests of the creditors as a class, and provides for distribution of the debtor's assets among them, and he maintained that the Act here in question is not only lacking in such a characteristic, but is inconsistent therewith, and he gave 12 reasons, which may be compendiously stated as follows:—The Act is mainly designed to keep the debtor farmer on the land at the expense of his creditors; it deals with a stage prior to bankruptcy and insolvency and is designed to prevent bankruptcy by means of a composition which is compulsory on creditors and defeats their interests; it deals with assets belonging to creditors for the benefit of the debtor; the references to bankruptcy are merely ancillary to the main design; and the Act has no general relation to bankruptcy and insolvency, as it refers to farmers only and may refer to certain provinces only.

The long title of the Act of 1934 is "An Act to facilitate compromises and arrangements between farmers and their creditors." The relevant sections of the Act of 1934, as amended by the Act of 1935, may now be referred to. The provisions and rules of the Bankruptcy Act are made applicable by subsections 2 and 3 of section 2 of the Act, which provide,

> (2) Unless it is otherwise provided or the context otherwise requires, expressions contained in this Act shall have the same meaning as in the *Bankruptcy Act,* and this Act shall be read and construed as one with the *Bankruptcy Act,* but shall have full force and effect notwithstanding anything contained in the *Bankruptcy Act,* and the provisions of the *Bankruptcy Act* and Bankruptcy Rules shall, except as in this Act otherwise provided, apply *mutatis mutandis* in the case of proceedings hereunder including meetings of creditors.
>
> (3) In any case where the affairs of a farmer have been arranged by a proposal approved by the Court or confirmed by the Board, as hereinafter provided, Part I of the *Bankruptcy Act* shall notwithstanding section seven thereof thereafter apply to such farmer but only failure on the part of such farmer to carry out any of the terms of the proposal shall be deemed to be an act of bankruptcy. Provided that such failure shall not be deemed an act of bankruptcy if, in the opinion of the Court, such act was due to causes beyond the control of such farmer.

The main provisions of the Act, on which the controversy turns, are contained in sections 6 to 11, which relate to compositions, and section 12, under which a Board of Review may be established; these sections provide as follows:—

COMPOSITIONS

> **6.** (1) A farmer who is unable to meet his liabilities as they become due may make a proposal for a composition, extension of time or scheme of arrangement either before or after an assignment has been made.
>
> (2) Such proposal shall be filed with the Official Receiver who shall forthwith convene a meeting of the creditors and perform the duties and functions required by the *Bankruptcy Act* to be performed by a trustee in the case of a proposal for a composition, extension of time or scheme of arrangement.
>
> **7.** A proposal may provide for a compromise or an extension of time or a scheme of arrangement in relation to a debt owing to a secured creditor, or in relation to a debt owing to a person who has acquired movable or immovable property subject to a right of redemption, but in that event the concurrence of the secured creditor or such person, shall be required, except in the case of a proposal formulated and confirmed by the Board of Review as hereinafter provided.
>
> **8.** Whenever a proposal relates to the rights of a secured creditor or of a person who has acquired movable or immovable property subject to a right of redemption, such creditor or person may value his security and shall be entitled to vote only in respect of the balance of his claim after deducting the amount of his valuation; provided, however, that no proposal shall be approved by the court which provides for the payment to such secured creditor or person on account of such security of any amount in excess of his valuation, or for granting to him any new security for an amount in excess of his valuation.
>
> **9.** Subsections three and five of section sixteen of the *Bankruptcy Act* shall not apply in the case of a proposal for a composition, extension of time or scheme of arrangement made by any farmer.

32077—10

10. Whenever a proposal has been approved by the court or whenever a proposal has been formulated and confirmed by the Board, as hereinafter provided, the court may order the farmer to execute any mortgage, conveyance or other instrument necessary to give effect to the proposal.

11. (1) On the filing with the Official Receiver of a proposal, no creditor whether secured or unsecured, shall have any remedy against the property or person of the debtor, or shall commence or continue any proceedings under the *Bankruptcy Act,* or any action, execution or other proceedings for the recovery of a debt provable in bankruptcy, or the realization of any security unless with leave of the court and on such terms as the court may impose: Provided, however, that the stay of proceedings herein provided shall not be effective for more than ninety days from the date of filing of the proposal with the Official Receiver, unless the court makes one or more orders extending the time for the purpose of any proceedings in connection with the proposal. 1935, Ch. 20, Am.

(2) On a proposal being filed the property of the debtor shall be deemed to be under the authority of the court pending the final disposition of any proceedings in connection with the proposal and the court may make such order as it deems necessary for the preservation of such property.

Provincial Boards of Review

12. (1) The Governor in Council may, whenever he considers it expedient, establish in any province a Board of Review which shall exercise in such province the jurisdiction hereinafter provided.

(2) A Board shall consist of a Chief Commissioner and two Commissioners who shall be appointed by the Governor in Council and shall hold office during pleasure and shall receive such remuneration as the Governor in Council may provide.

(3) The Chief Commissioner shall be a judge of the court of the province invested with original or appellate jurisdiction in bankruptcy by the *Bankruptcy Act,* and one Commissioner shall be appointed as a representative of creditors and one Commissioner shall be appointed as a representative of debtors. In the event of any Commissioner other than the Chief Commissioner being unable to hear and deal with any case for any reason considered sufficient by the remaining Commissioners, then the remaining Commissioners shall name an *ad hoc* Commissioner to hear and deal with such case with all the powers of the Commissioner whose place he takes. In the event of the Chief Commissioner being unable to hear and deal with any case on the request of the other Commissioners the Minister shall name an *ad hoc* Chief Commissioner with all the powers of the Chief Commissioner. 1935, Ch. 20, Am.

(4) In any case where the Official Receiver reports that a farmer has made a proposal but that no proposal has been approved by the creditors, the Board shall, on the written request of a creditor or of the debtor, endeavour to formulate an acceptable proposal to be submitted to the creditors and the debtor, and the Board shall consider representations on the part of those interested.

(5) If any such proposal formulated by the Board is approved by the creditors and the debtor, it shall be filed in the court and shall be binding on the debtor and all the creditors.

(6) If the creditors or the debtor decline to approve the proposal so formulated, the Board may nevertheless confirm such proposal, either as formulated or as amended by the Board, in which case it shall be filed in the Court and shall be binding upon all the creditors and the debtor as in the case of a proposal duly accepted by the creditors and approved by the Court. 1935, Ch. 20, Am.

(7) Every request to formulate a proposal shall be dealt with by the full Board, but a determination of the majority shall be deemed to be the determination of the Board: Provided that the Board may direct any one or more of its members on its behalf to inspect and investigate any or all circumstances of any request for review and report to the Board. 1935, Ch. 20, Am.

(8) The Board shall base its proposal upon the present and prospective capability of the debtor to perform the obligations prescribed and the productive value of the farm.

(9) The Board may decline to formulate a proposal in any case where it does not consider that it can do so in fairness and justice to the debtor or the creditors.

(10) For the purposes of the performance of its duties and functions hereunder a Board shall have the powers of a Commissioner appointed under the *Inquiries Act.*

(11) Notwithstanding anything contained in the *Bankruptcy Act,* an insolvent debtor resident in the Province of Quebec, engaged solely in farming or the tilling of the soil, whose liabilities to creditors provable as debts under the *Bankruptcy Act* exceed five hundred dollars, may make an assignment for the general benefit of his creditors in any case where the Board declines to formulate a proposal and certifies that in its opinion the debtors' affairs can best be administered under the *Bankruptcy Act.* 1935, Ch. 20, Am.

In a general sense, insolvency means inability to meet one's debts or obligations; in a technical sense, it means the condition or standard of inability to meet debts or obligations, upon the occurrence of which the statutory law enables a creditor to intervene, with the assistance of a Court, to stop individual action by creditors and to secure administration of the debtor's assets in the general interest of creditors; the law also generally allows the debtor to apply for the same administration. The justification for such proceeding by a creditor generally consists in an act of bankruptcy by the debtor, the conditions of which are defined and prescribed by the statute law. In a normal community it is certain that these conditions will require revision from time to time by the legislature; as also the classes in the community to which the bankruptcy laws are to apply may require reconsideration from time to time. Their Lordships are unable to hold that the statutory conditions of insolvency which enabled a creditor or the debtor to invoke the aid of the bankruptcy laws, or the classes to which these laws applied, were intended to be stereotyped under head 21 of section 91 of the British North America Act so as to confine the jurisdiction of the Parliament of Canada to the legislative provisions then existing as regards these matters.

Further, it cannot be maintained that legislative provision as to compositions, by which bankruptcy is avoided, but which assumes insolvency, is not properly within the sphere of bankruptcy legislation. (*In re Companies' Creditors Arrangement Act*, (1934) S.C.R. 659.)

It will be seen from the sections above quoted, that the Act here in question relates only to a farmer who is unable to meet his liabilities as they become due, and enables him to make a proposal for a composition, extension of time or scheme of arrangement either before or after an assignment has been made, for which a precedent existed in the Canadian Bankruptcy Act of 1919. As defined in section 2, an assignment means an assignment made under the Bankruptcy Act by a farmer. If the creditors fail to approve of the farmer's proposal, the Board of Review, on the written request of a creditor or the debtor, is to endeavour to formulate "an acceptable proposal" for submission to the creditors and the debtor; if the creditors or the debtor decline to approve the Board's proposal, the Board may nevertheless confirm their proposal, and it is to bind the creditors and the debtor.

Subject to the contention by the appellant, now to be dealt with, their Lordships are of opinion that these provisions fall within head 21 of section 91 of the British North America Act.

The appellant maintains that the real object of these provisions is to keep the farmers on the land for the benefit of agricultural production, and that this object is to be attained by the operations of the Board of Review, who have power to sacrifice the interests of the creditors for the benefit of the debtor farmer; he further maintains that under section 7 the secured creditor may be deprived of that which is his property.

To deal first with the last contention, their Lordships are clearly of opinion that section 7 does not enable any creditor to be deprived of his security, but does enable the proposal for composition to provide for the reduction of the debt itself or an extension of time for its payment, which is a familiar feature of compositions.

The appellant laid stress on the provisions of subsection 8 of section 12, but that does not appear to their Lordships to be an illegitimate or unusual element to be taken into account in the consideration of composition schemes, and indeed the retention of the business under the management of the debtor may well be a consideration in the interests of the creditors as well as of the debtor. Its fair application appears to be well secured by the provisions of subsections

3, 4 and 9. A judicial Chief Commissioner is provided for under subsection 3; under subsection 4 the Board's proposal is to be designed as an acceptable one to both parties, and this element is emphasised by subsection 9. Their Lordships are unable to accept the contention that the Act is not genuine legislation relating to bankruptcy and insolvency.

Accordingly, the appeal fails, and their Lordships will humbly advise His Majesty that the appeal should be dismissed without costs and that the opinion of the majority of the Supreme Court should be affirmed.

Privy Council Appeal No. 105 of 1936

Consolidated Appeals

In the matter of a Reference as to whether the Parliament of Canada had legislative jurisdiction to enact The Dominion Trade and Industry Commission Act, 1935.

FROM

THE SUPREME COURT OF CANADA

JUDGMENT OF THE LORDS OF THE JUDICIAL COMMITTEE OF THE PRIVY COUNCIL, DELIVERED THE 28TH JANUARY, 1937

Present at the Hearing:

LORD ATKIN.
LORD THANKERTON.
LORD MACMILLAN.
LORD WRIGHT (Master of the Rolls).
SIR SIDNEY ROWLATT.

[*Delivered by* LORD ATKIN]

This is an appeal and cross-appeal from a judgment of the Supreme Court on a reference by the Governor-General in Council dated 5th November, 1935, asking whether The Dominion Trade and Industry Commission Act was *ultra vires* of the Parliament of Canada. The unanimous answer of the Supreme Court which was expressed to be directed only to those sections of the Act upon which they had the benefit of argument was that sections 14, 18 and 19 were *ultra vires*, that sections 16 and 17 were not *ultra vires:* and that sections 20, 21 and 22 so far as they were applicable to such of the enactments or to offences created by such of the enactments enumerated in section 2 (*h*) as might be *intra vires* were not *ultra vires*. The Board were invited in argument to deal with sections 23-26 inclusive which are not referred to in the judgment of the Supreme Court presumably because no argument upon them was addressed to the Court. Except on one point, viz., as to validity of sections 18 and 19 their Lordships agree with the judgment of the Supreme Court and the reasons

given by the Chief Justice with which the other learned judges concurred. Sections 15 (2), 16, 17 and 20 appear to be legitimate provisions for ascertaining whether criminal acts have been committed. Section 22 (*a*) was said to take out of the control of the law officers of the Province the conduct of the criminal proceedings referred to in the section. If so, it was said to encroach upon section 92 (14): the Administration of Justice in the Province. A similar objection was made to the latter part of section 20. The answer in respect of both sections is that the contention is based upon a construction of the section which the words do not bear. Nothing in the section gives either the Attorney-General of Canada, or the Director of Public Prosecutions any authority other than to commence proceedings in accordance with the law of the Province and thereafter to give such assistance to the authorities of the Province as is within the existing rights of persons in such case, and as may be acceptable to the authorities. Sections 23 to 26 appear to define the power of the Commission, and to give them no rights of interfering with rights or property in the Province, except possibly powers under section 26 which are of like validity with the powers given by the valid Dominion Acts there referred to.

The only remaining question is as to the validity of sections 18 and 19, which is the subject matter of the cross-appeal, and in this matter only their Lordships find themselves in disagreement with the judgment of the Supreme Court.

Section 18 (1) provides that the words "Canada Standard" or the initials "C.S." shall be a national trade mark and the exclusive property in, and the right to the use of such trade mark is thereby declared to be vested in His Majesty in the right of the Dominion. By subsection (2) such national trade mark as applied to any commodity pursuant to the provisions of that Act or any other Act of the Parliament of Canada is to constitute a representation that such commodity conforms to the requirements of a specification of a commodity standard established under the provisions of any Dominion Act. By section 19 (1) any producer or manufacturer or merchant is given permission to apply the national trade mark to any commodity provided it conforms to the appropriate statutory specification and by subsection (2) it is made an offence to apply the mark to any commodity in violation of the prescribed conditions.

There exists in Canada a well-established code relating to trade marks created by Dominion statutes, to be found now in R.S.C. 1927, c. 201, amended by S.C. 1928, c. 10. It gives to the proprietor of a registered trade mark the exclusive right to use the trade mark to designate articles manufactured or sold by him. It creates therefore a form of property in each Province and the rights that flow therefrom. No one has challenged the competence of the Dominion to pass such legislation. If challenged one obvious source of authority would appear to be the class of subjects enumerated in 91 (2), the Regulation of Trade and Commerce, referred to by the Chief Justice. There could hardly be a more appropriate form of the exercise of this power than the creation and regulation of a uniform law of trade marks. But if the Dominion has power to create trade mark rights for individual traders, it is difficult to see why the power should not extend to that which is now a usual feature of national and international commerce—a national mark. It is perfectly true as is said by the Chief Justice that the method adopted in section 18 is to create a civil right of a novel character. Ordinarily a trade mark gives rights only when used in connection with goods manufactured or sold by the person who has the right to use the mark. A trade mark "in gross" would be an anomaly. And it obviously is not contemplated that the Crown should have any proprietary interest in the goods to which the mark vested in the Crown is to be applied. But there seems no reason why the legislative competence of the Dominion Parliament should not extend to the creation of juristic rights in novel fields.

if they can be brought fairly within the classes of subjects confided to Parliament by the constitution. The substance of the legislation in question is to define a national mark, to give the exclusive use of it to the Dominion so as to provide a logical basis for a system of statutory licences to producers, manufacturers and merchants. To vest the "exclusive property" in the mark in His Majesty is probably no more than to vest "the use of" the mark in His Majesty. It may afford a useful civil protection for the mark when it is violated in Canada by persons who have not violated the somewhat restricted prohibition of the penal subsection (which only applies to persons who "apply" the mark to commodities) or violated abroad, where the penal provisions of the law of Canada could not be applied at all. It may be noticed that section 53 of R.S.C. c. 201 appears to afford protection in Canada to trade marks owned by foreign associations though held by them "in gross." For the reasons above given the legislation appears to their Lordships to be within the competence of the Dominion Parliament. No appeal was directed to the Board as to the answer to section 14. Their Lordships therefore will humbly advise His Majesty that the appeal be dismissed and the cross-appeal be allowed and that the answers be varied as to sections 18 and 19 by stating that the sections are not *ultra vires*, and by adding that as to sections 23 to 26 inclusive these sections are not ***ultra vires***.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

ROOMS 716-717 UNIVERSITY TOWER BUILDING (UNIVERSITY AT ST. CATHERINE ST.),
MONTREAL, QUE.

OCTOBER, 1, 1936.

WITH the completion of the three-year period the Sixth Report of Canadian Railway Board of Adjustment No. 1 is submitted herewith. It embraces the operations of the Board from October 1, 1933, to September 30, 1936.

During this time the Board held Nine Sessions, sitting sixteen days, and rendered decisions in thirty-six cases and five supplements.

Canadian Railway Board of Adjustment No. 1 was founded originally under an Agreement dated August 7, 1918, between the Railways of Canada and six Organizations representing employees in train, telegraph and track service on these railways, for the purpose of avoiding any disputes or misunderstandings that might interfere with the fullest possible measure of efficiency in transportation service during the War.

This was supplemented by a Post-War Agreement continuing the Board's functions, entered into on April 15, 1921. Under this new compact between the Railway Association of Canada (representing Canadian Railroads) and the six labour organizations enumerated hereafter, the Board now operates. This Agreement reads:—

MEMORANDUM OF AGREEMENT made between the Railway Association of Canada, acting for the Railways of Canada, whose names appear in Appendix "A" hereof, members thereof, of the one Part; and

The Brotherhood of Locomotive Engineers.
The Brotherhood of Locomotive Firemen and Enginemen.
The Order of Railway Conductors.
The Brotherhood of Railroad Trainmen.
The Order of Railroad Telegraphers, and
The United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers,

acting for the said classes of employees of the said railways, of the other Part.

Whereas the parties hereto, guided by a desire to aid in the preservation of industrial peace in the Dominion of Canada, have resolved upon the appointment of a Board composed of members to be selected as hereafter prescribed, which shall have full power and authority to determine all differences which may arise between any of the said railways and any of the classes of its employees above-mentioned, and which are not settled between the officers and employees of the railway concerned, including the interpretation of wage schedules or agreements, having due regard to the rights of the several classes of employees and of the railways respectively.

Now therefore, it is agreed by and between the parties as follows:—

1. The Board appointed in pursuance of the terms of agreement dated August 7, 1918, between the parties hereto, known as Canadian Railway Board of Adjustment No. 1, shall be continued subject to change or dissolution as provided for herein.

2. The Board shall consist of twelve members, six to be selected by the Railway Association of Canada and compensated by the Railways, and six by the Executive Officers of the Organizations of Employees hereinbefore named, and compensated by such organizations.

3. The Officers of the Board shall consist of a Chairman and a Vice-Chairman who shall be members of the Board and elected by the Board, and a Secretary appointed by the Chairman subject to approval of the Board.

The Chairman and Vice-Chairman shall serve for a period of one year from date of election. In case of vacancy the position shall be filled for unexpired portion of term by the election of a member of the Board.

The Chairman or Vice-Chairman shall preside at meetings of the Board, and both are required to vote upon the adoption of all decisions by the Board.

4. The Board shall meet regularly at stated times and continue in session until all matters placed before it at the commencement of the session in accordance with its regulations, have been considered.

5. Unless otherwise mutually agreed, all meetings of the Board shall be held in the City of Montreal, P.Q., provided that the Board shall have authority to empower two or more of its members to conduct hearings and pass upon controversies when properly submitted, at any place designated by the Board, provided, further, that such division of the Board shall not be authorized to make final decision. All decisions shall be made, approved, or ratified by the Board as herein provided.

6. Should a vacancy occur in the Board, such vacancy shall be filled immediately by the same appointive authority which made the original selection.

7. The Board shall render decisions on all matters of controversy arising from interpretations of wage agreements and other matters in dispute, as provided in the preamble hereof, and when submitted to the Board in accordance with its regulations.

8. All disputes, including personal grievances, or controversies arising or pending under interpretation of wage Agreements between officials of a railway and its employees covered by this agreement, are to be handled in the usual manner by General Committees of the Employees up to and including the Chief Operating Officer of the railway (or someone

officially designated by him), when if an agreement be not reached, the Chairman of the General Committee of employees may refer the matter to the Executive Officer of the organization concerned, and if the contention of the Employees' Committee is approved by such Executive Officer, then the Chief Operating Officer of the Railway and the Executive Officer of the Organization shall refer the matter with all supporting papers to the Board which shall promptly hear and decide the case, giving due notice to the Chief Operating Officer of the railway and to the Executive Officer of the organization of the time set for hearing.

9. No matter will be considered by the Board unless officially referred to it in the manner herein described, provided, however, that no case having origin in circumstances which occurred prior to August 7, 1918 (date of original agreement between Canadian Railway War Board and Labour Organizations upon which Canadian Railway Board of Adjustment No. 1 was founded), shall be referred to the Board except those arising out of disputes properly pending at the above-mentioned date.*

10. In hearings before the Board, the railway shall be represented by such persons or persons as may be designated by the Chief Operating Officer, and the employees shall be represented by such person or persons as may be designated by the Executive Officer of the organization.

11. All clerical and office expenses will be borne equally by the Railway Association of Canada and the organizations above mentioned. The railway directly concerned and the organizations involved in a hearing, respectively, will assume any expenses incurred in presenting a case.

12. In each case an effort should be made by the disputants to present a joint, concise statement of facts, but the Board is fully authorized to require information in addition to such statement of facts, and may call upon the Chief Operating Officer of the railway or the Executive Officer of the organization for additional evidence, either oral or written. In event of a joint statement not being submitted, each disputant should furnish the other with a copy of his individual statement and each should give the other a copy of his supporting statement of the contention.

13. All decisions of the Board shall be approved by a majority vote of all members of the Board, except that in the event of a member of the Board presenting a case, such member shall not vote upon the decision of the case, and in order that the voting strength of each side may be equal, a member of the opposite side of the Board shall refrain from voting.

14. After a matter has been considered by the Board, in the event a majority vote cannot be obtained, any six members of the Board may elect to refer the matter upon which no decision has been reached to a referee to be unanimously agreed upon by the Board, and in case of failure to agree, application shall be made to the Minister of Labour of the Dominion of Canada for appointment of a referee.

15. The Board shall keep a complete and accurate record of all matters submitted for its consideration, and of all decisions made by the Board.

16. A report of all cases decided, including the decisions, will be filed with the Railway Association of Canada, with the Chief Operating Officer of the Railway affected and with the Executive Officer of the organization concerned.

17. It is further agreed that the Board shall have like authority to determine differences between any of the railways represented herein and any other classes of employees of such railways, and between any steam railway in Canada not represented herein and the employees thereof, provided that the parties to the dispute shall make joint submission of the case to the Board and shall agree that the decision of the Board shall be accepted by each party as final and binding.

18. This Agreement shall remain in full force and effect until amended or terminated in accordance with the terms of Clause 19 hereof.

19. Should it be desired by the Railway Association of Canada, representing the railways, or a majority of the Executive Officers of the organizations, representing the employees, this Agreement may be amended or terminated at any time during its existence upon service of thirty days' notice by the one party upon the other.

Signed on behalf of each of the above-named parties this 15th day of April, A.D. 1921.

THE
RAILWAY ASSOCIATION OF CANADA,

"That any case submitted to this Board should have its origin in circumstances occurring within two years previous to the date of such submission."

* Now Northern Alberta Railways.
[1] Now Canadian National Railways.

Changes in Personnel

During the three-year period under review the following changes have taken place in the Board's membership:—

July 20, 1934—Mr. Thomas Todd, Vice-President of the Order of Railway Conductors, appointed to replace Mr. S. N. Berry, deceased, as representative of that Organization on the Board.

January 1, 1936—W. A. Mather, General Manager, Canadian Pacific Railway, Western Lines, appointed as representative of the Railway Association of Canada on the Board, to succeed Mr. W. M. Neal, Vice-President, Canadian Pacific Railway, Western Lines, resigned.

Obituary—Mr. S. N. Berry, President of the Order of Railway Conductors, died at Cedar Rapids, Iowa, on June 27, 1934.

Officers elected during period

July 11, 1934—Mr. H. T. Malcolmson, elected Chairman; re-elected September 11, 1935.

July 11, 1934—Mr. W. V. Turnbull, elected Vice-Chairman; re-elected September 11, 1935.

Membership of Board

At present the Board consists of the following members:—

Mr. H. T. Malcolmson, Vice-President and General Manager, Toronto, Hamilton & Buffalo Railway Co., Chairman;

Mr. W. V. Turnbull, Vice-President, Brotherhood of Maintenance of Way Employees, Vice-Chairman;

Mr. W. J. Babe, Vice-President, Brotherhood of Railroad Trainmen;

Mr. H. B. Chase, Assistant Grand Chief Engineer, Brotherhood of Locomotive Engineers;

Mr. S. B. Clement, Chief Engineer, Temiskaming & Northern Ontario Railway Commission;

Mr. A. E. Crilly, Assistant Chief of Personnel, Canadian National Railways;

Mr. Geo. Hodge, Manager, Department of Personnel, Canadian Pacific Railway;

Mr. H. H. Lynch, Vice-President, Brotherhood of Locomotive Firemen and Enginemen;

Mr. W. A. Mather, General Manager, Canadian Pacific Railway, Western Lines;

Mr. W. H. Phillips, Vice-President, Order of Railroad Telegraphers;

Mr. Thomas Todd, Vice-President, Order of Railway Conductors;

Mr. A. E. Warren, Vice-President, Canadian National Railways.

Attached hereto will be found a summary of the thirty-six cases and five supplementary decisions rendered, specifying the nature of the claim with a synopsis of each decision.

A financial statement for the period is also appended.

Previous reports were issued as follows:—

First Report — issued October 1, 1920;
Second Report — issued October 1, 1923;
Third Report — issued October 1, 1927;
Fourth Report — issued October 1, 1930;
Fifth Report — issued October 1, 1933;

copy of any of which can be had on application to the Secretary, Room 716, University Tower Building, Montreal, Que.

H. T. MALCOLMSON,
Chairman.

W. V. TURNBULL,
Vice-Chairman.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

Sixth Report of Proceedings—Summary of Cases submitted to the Board from October 1, 1933, to September 30, 1936

Case Nos.	Date Decision Rendered	Parties to Dispute	Question	Synopsis of Decision
Sup. 1 to 408	July 11, 1934	C.N.R. (A.R.) and B.R.T.	Application of Board's decision *re* assignment of Baggagemen between Sackville, N.B. and Borden, P.E.I.	Extra time under Art. 12(d) of Schedule is payable to baggageman for all time during which he performed extra service beyond that performed by balance of train crew working as a unit.
416	Mar. 5, 1935	C.N.R. (C.R.) and O.R.C. & B.R.T.	Claim of Conductor and Brakeman for 100 miles on each date Sept. 24 and 30 when trains 447 and 448 were cancelled between Belleville and Ottawa.	Case heard originally August 8, 1933, and referred back to parties for further information, who now advise satisfactory settlement reached.
420	Dec. 13, 1933	T. & N.O.R. Com. and O.R.C. and B.R.T.	Claim of Employees that Rly. is required to assign three brakemen to mixed trains operating 50 miles or over on main line.	Schedule of Rules governing Conductors and Trainmen does not require assignment of three brakemen on mixed train service. Claim of employees denied.
421	Dec. 13 ,1933	C.N.R. (A.R.) and B.L.E. and B.L.F. & E.	Claim of Engineer and Fireman for time lost.	Claim of Employees sustained under circumstances involved in this case.
422	Dec. 13, 1933	C.N.R. (W.R.) and O.R.C. and B.R.T.	Method of Paying crews on interdivisional runs for work done at intermediate terminals, Interpretation of Rule 9(a) Conductor's Schedule and Rule 12(a) of Trainmen's Schedules.	Case 402 not intended to change previously established practice, and was limited to specific case then under consideration. The Board can only deal with schedule interpretations in specific cases in which principles involved and in dispute are clearly demonstrated.
423	Dec. 13, 1933	C.N.R. (C.R.) and O.R.C. and B.R.T.	Roadmen performing switching service in Allandale Yard.	Road crews should not be required to perform service to which Yardmen are entitled under Article 140.
424	Dec. 13, 1933	C.N.R. (W.R.) and B.R.T.	Claim of Conductor and crew for 100 miles account of being run around at Belmont, Man. Feb. 19, 1933.	Agreement requires that snow plough extra out of a terminal under such circumstances as stated in this case should have a train crew.
425	Apr. 11, 1934	C.N.R. (A.R.) and B.L.F. & E.	Claim of Locomotive Firemen at Moncton, N.B. for run-arounds.	First fireman out on spare board competent for service as hostler should have been called. Any claim submitted for run-arounds on this basis should be allowed.
426	Apr. 11, 1934	C.N.R. (A.R.) and B. of M. of W.E.	Proper rate of pay for carpenters, bridgemen, painters, etc., laid off from B & B dept. who take jobs as laborers under a B & B foreman.	When reduction in staff is made carpenters and bridgemen who take jobs as laborers in B & B gangs are entitled to 42c. per hour. Such carpenters and bridgemen working in gangs in which other labourers are paid 42c. per hour should receive the 42c. per hour rate. This 42c. per hour rate does not necessarily apply to laid off carpenters and bridgemen who, of their own choice, accept work in an extra gang. Recommend claims be analyzed on this basis and any unsettled questions will be further considered by the Board when returned to it with specific information in relation thereto.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

Sixth Report of Proceedings—Summary of Cases submitted to the Board from October 1, 1933, to September 30, 1936—*Continued*

Case Nos.	Date Decision Rendered	Parties to Dispute	Question	Synopsis of Decision
Sup. 1 to 426	July 11, 1934	C.N.R. (A.R.) and B. of M. of W.E.	Application of Board's decision in Case 426.	In the opinion of the Board there need not necessarily be other labourers in a B & B gang receiving the 42c. rate to entitle a demoted carpenter or bridgeman working as a labourer to receive such rate. Board's decision was not intended to mean that the Company did not have the right to work extra gangs under a B & B foreman in the Maintenance of Way Department.
Sup. 2 to 426	Mar. 5, 1935	C.N.R. (A.R.) and B. of M. of W.E.	Further interpretation of Board's decision asked for.	Cases agreed upon to be paid. If any other claims unsettled cases to be re-submitted in line with decision in original Case No. 426.
Sup. 3 to 426	Sept. 11, 1935	C.N.R. (A.R.) and B. of M. of W.E.	Specific claims still unpaid submitted.	In opinion of the Board the men were employed in extra gangs and therefore claim of employees not sustained.
427	Apr. 11, 1934	C.N.R. (A.R.) and O.R.T.	Position of Chief Despatcher at Halifax, N.S.	Under conditions as they existed in this case, the Telegraphers were entitled to the application of the terms of the understanding as contained in letter of July 28, 1927, from the General Manager of the Atlantic Region to the General Chairman of Telegraphers.
428	Apr. 11, 1934	C.N.R. (W.R.) and B.R.T.	Seniority rating of Yardman in the Vancouver Yards of Canadian National Rlys.	The standing of the yardman in question on the seniority list having been established by mutual arrangement between the representatives of the Company and of the Employees, it should be so maintained unless changed by mutual arrangement.
429	Apr. 11, 1934	C.N.R. (W.R.) and O.R.C. and B.R.T.	Terminal payments to crews on interdivisional runs when passing through an intermediate terminal on their assignment.	Claim of employees is sustained where switching is performed by the train crew and not by any yard crew. Such time will be deducted in computing overtime for the trip and this switching will not be regarded as constituting switching at an intermediate point under Art. 5, Rule 10 of Trainmen's Schedule, and Art. 5, Rule 7 of Conductor's Schedule.
Sup. 1 to 429	Oct. 10, 1934	C.N.R. (W.R.) and O.R.C. and B.R.T.	Request for further decision in Case 429.	All time delayed at an intermediate terminal when switching is performed shall be paid for.
430	Apr. 11, 1934	C.N.R. (W.R.) and O.R.C.	Dismissal of Conductor.....	Contention of Employees not sustained.
431	Apr. 11, 1934	C.N.R. (W.R.) and O.R.T.	Claim of Relief Agent at Heisler, Alta., for two weeks pay.	Contention of Employees not sustained.
432	July 11, 1934	C.N.R. (C.R.) and B.R.T.	Complaint of Yardmen assigned to 14th. Seniority District account refusal of Company to re-establish homestead rights.	Contention of Employees not sustained. Homesteading rights in yard service having been abolished by mutual agreement between Representatives of Railway and of the Employees, the existing arrangement should be maintained until changed by mutual agreement.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

Sixth Report of Proceedings—Summary of Cases submitted to the Board from October 1, 1933, to September 30, 1936—*Continued*

Case Nos.	Date Decision Rendered	Parties to Dispute	Question	Synopsis of Decision
433	July 11, 1934	C.P.R. (W.L.) and B.L.E.	Payment of Engineer when used to assist a train out of Souris, Man. Sept. 20, 1932.	Board recommends parties negotiate an agreed application of schedule rules as to conditions affecting engine crews in Switching service assisting trains out of Souris.
434	July 11, 1934	C.N.R. (C.R.) and O.R.T.	Displacement of Assistant at Newmarket, Ont. and claim for lost time on that account.	In view of all circumstances in this case the claim of the Employees is not sustained.
435	July 11, 1934	C.N.R. (A.R.) and O.R.T.	Position of terminal agent at Truro, N.S.	Claim of employees sustained to the extent that the new position of agent should now be bulletined as a new position and senior qualified applicant be assigned.
436	Oct. 10, 1934	C.N.R. (W.R.) and B.L.E. and B.L.F. & E.	Payment to Engineers and Firemen on unassigned runs running through a terminal.	Claim of Employees not sustained.
437	Oct. 10, 1934	T. & N.O. Rly. Com. and O.R.C. and B.R.T.	Claim of Conductors and Trainmen that a Conductor has been improperly dismissed and that he should be reinstated and paid for time held out of service.	Claim of Employees not sustained.
438	Oct. 9, 1934	C.N.R. (C.R.) and O.R.T.	Vacation pay claimed by Spare Operator St. Lawrence Division.	Operator was still on seniority list in 1933 and available as a spare operator, the provisions of Art. 14, clause (g) apply, and he was entitled to vacation pay in 1933 on the basis of one day's pay for each twenty-five and a half days he was shown on the payroll in 1932.
439	Mar. 5, 1935	C.N.R. (C.R.) and B.R.T.	Claim of Conductor for mileage disallowed (38 mi.) while in charge of Snow Plough Extra Feb. 1, 1934.	Without deciding whether or not Madawaska is a terminal in regard to which some question arose, under the circumstances stated, the claim of the employees for 38 additional miles for the service is sustained.
440	Mar. 5, 1935	C.N.R. (C.R.) and B.R.T.	Claim of Conductor and two brakemen for through freight rates Montreal to Massena and return Feb. 20, 1934.	Claim of employees sustained.
441	June 11, 1935	C.N.R. (C.R.) and O.R.T.	Temporary abolition of Telegrapher's position in Depot Harbor Freight Office during the closed season of navigation.	The operator's position having been re-established for the current season of navigation arrangements should be made to reinstate the former operator in the position and parties should confer further as to subsequent seasons.
442	June 11, 1935	C.N.R. (W.R.) and O.R.T.	Re Agency at Westport, Ont....	While existing conditions are maintained the agency should be regarded as continuing to come within provisions of Telegraphers' Agreement. It having been made evident that there was justification for a revision of rate of pay of the position, the parties should confer in regard to this question. Subject to this considera tion the claim of employees is sustained.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

Sixth Report of Proceedings—Summary of Cases submitted to the Board from October 1, 1933, to September 30, 1936—*Continued*

Case Nos.	Date Decision Rendered	Parties to Dispute	QUESTION	Synopsis of Decision
443	June 11, 1935	C.N.R. (W.R.) and B.L.E. and B.L.F. & E.	Payment to Engineers and Firemen for certain trips claimed as "side" trips.	Following Board's decision in Case 177 it was arranged between the parties that the arbitrary allowance of 10 mi. previously paid for side trips on regularly assigned runs should be discontinued, actual mileage plus detention and switching at turn-around points on the side trips being substituted therefor. This arrangement continued in effect for approximately 7 years. New schedule rule was adopted for Engineers in 1930, and Firemen in 1931 and it was indicated that under these rules detention and switching at turn-around points on side trips were paid for up to 1933 in all the cases mentioned. This practice would appear to indicate that there was a mutual understanding of the intent of existing rules at the time they were adopted which became effective in practice for approximately three years. The facts being as indicated, on the basis of existing rules the claim of the Employee is sustained.
444	Sept. 11, 1935	C.P.R. (W.L.) and B.L.E. and B.L.F. & E.	Dispute relative to discontinuance of Raith as an established turn-around point, as understood under provisions of Art. 7 Engineers' and Firemen's schedules.	Claim of employees not sustained under existing conditions.
445	Nov. 12, 1935	C.N.R. (A.R.) and B.R.T.	Claim of Conductor and crew when engine used to assist another train.	Rule in effect since 1929. Case referred back to parties to be settled on basis of established practice.
446	Nov. 12, 1935	C.P.R. (W.L.) and B.L.E.	Claim of Engineer for 50 miles as run around at Midway Apr. 15, 1934.	Claim of Employees sustained.
447	Nov. 12, 1935	C.P.R. (W.L.) and B.L.E.	Payment of way-freight rates for full trip, part of which was en route on barge, and which has been paid for at thro' freight rates.	In the case of assigned way-freight crews making movements on barges, way-freight rates will apply for entire trip. Claim of employees sustained.
448	Nov. 12, 1935	C.P.R. (W.L.) and B.L.E.	Claim of Engineers at Ft. William for extra mileage for yard movements at Raith, which is an intermediate point on the Kaministiquai Subdivision between Ft. William and Ignace. Specific claim filed.	Claim of Employees not sustained.
449	Nov. 12, 1935	C.P.R. (W.L.) and B.L.F. & E.	Claim for new day submitted by engineers and firemen out of Broadview Dec. 22, 1934 and Jan. 5, 1935.	Board recommends parties should endeavor negotiate between themselves an agreed application of the schedule rules as to the conditions affecting engine crews in switching service assisting trains out of Broadview.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

Sixth Report of Proceedings—Summary of Cases submitted to the Board from October 1, 1933, to September 30, 1936—*Concluded*

Case Nos.	Date Decision Rendered	Parties to Dispute	QUESTION	Synopsis of Decision
450	Nov. 13, 1935	C.P.R. (W.L.) and B.L.F. & E.	Mileage which senior passenger engineer at Regina is permitted to make on his run.	Engineers' assignments out of Regina are in effect in accordance with arrangements between the representatives of the Company and of the Engineers and are within the terms of the agreement governing such conditions. The engineer occupies the assignment in which he is working by his own choice under the conditions provided for in the assignment. Therefore the claim of the employees is denied.
451	June 9, 1936	C.N.R. (W.R.) and B.R.T.	Right of Brakeman to take rest on arrival at terminal before taking engine to shop.	Under the circumstances in this particular case the claim of employees is not sustained.
452	June 9, 1936	C.N.R. (W.R.) and O.R.C.	Method of payment for certain trips on which ties were distributed.	Claim of Employees denied.
453	June 9, 1936	C.N.R. (C.R.) and O.R.T.	Temporary abolition of operator's position at Depot Harbor during the closed season of navigation.	Telegraphers are entitled to the position when duties are required which are ordinarily performed by Operator when that position is occupied.
454	June 9, 1936	C.N.R. (C.R.) and O.R.T.	Vacation allowance claimed due ex-agent, La Tuque, Que.	Claim of employees not sustained.

THE LABOUR GAZETTE

PREPARED AND EDITED BY

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 37] MARCH, 1937 [NUMBER 3

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

A moderate increase was noted in industrial employment in Canada at the beginning of February, according to returns received by the Dominion Bureau of Statistics from 9,996 firms, each with a minimum of fifteen employees. The staffs of these firms at February 1 aggregated 987,719 persons, as compared with 985,644 at January 1. This advance was smaller than the average gain noted at February 1 in preceding years of the record, which commences with 1921, but compares favourably with the decline that had been indicated at the same date of last year. The index, based on the 1926 average as 100, rose from 103·8 at January 1 to 104·1 at the beginning of February, as compared with 98·4 at the same date in 1936. At February 1 in the preceding years it was as follows:—1935, 94·6; 1934, 91·4; 1933, 77·0; 1932, 89·7; 1931, 100·7; 1930, 111·6; 1929, 110·5; 1928, 102·0; 1927, 96·6; 1926, 91·8; 1925, 87·1; 1924, 91·7; 1923, 90·6; 1922, 79·9 and 1921, 91·2. The returns are representative of employment in all industries except agriculture, fishing, hunting and highly specialized business.

At the beginning of February, 1937, the percentage of idleness reported to the Department of Labour by Local Trade Union members stood at 14·5 as contrasted with 14·3 per cent at the beginning of January 1937, and 14·8 per cent at the beginning of February, 1936. The percentage for February was based on the reports compiled from 1,825 labour organizations combining a membership of 188,690 persons.

Reports received by the Department of Labour from the offices of the Employment Service of Canada, showed a decline from December 1936, but a nominal gain over January last year in the business recorded during the month of January, 1937, as shown by the average daily placements recorded, the greatest losses under the first comparison taking place in farming and services and the highest gains under the second in logging, services and manufacturing. Vacancies in January, 1937, numbered 30,685, applications 63,173 and placements in regular and casual employment 28,746.

In retail prices the cost per week of a family budget of staple foods, fuel and lighting, and rent was $17.12 at the beginning of February as compared with $17.04 for January; $16.58 for February, 1936; $16 for February, 1935; $15.41 for June, 1933 (the low point in recent years); and $22.12 for February, 1930. In wholesale prices the weekly index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 was 83·0 for each of the last two weeks in February as compared with 81·6 for the week ended January 29. The increase in the interval was due in large part to higher prices for iron and steel and certain non-ferrous metals. On a monthly basis the index number was 81·3 for January, 1937 as compared with 72·5 for February, 1936; 71·8 for February, 1935; 63·5 for February, 1933 (the low point in recent years); and 93·9 for February, 1930.

The table on page 260 gives the most recent statistics available reflecting industrial conditions in Canada. The index of the physical volume of business was about one per cent lower in January than in the previous month but ten per cent higher than in January, 1936. Of the principal groups of factors used in the construction of the index and after any necessary adjustment for seasonal change mineral production and carloadings showed the largest declines in the month under review as compared with the previous month, the decrease in the former being due chiefly to lower exports of nickel and asbestos and lower imports of bauxite, and to smaller shipments of gold. Other principal groups to record decreases were manufacturing and construction, while electric power output and trade employment advanced and imports and exports were little changed after seasonal adjustments were made. All of the foregoing principal factors were substantially higher in January of the present year than in January, 1936, except construction, which was much lower. Information available for February shows advances in wholesale prices, employment, carloadings and contracts awarded, both as compared with the previous month and with February, 1936.

*Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

†For the week ended February 26, 1937.

(1) Calculated from yields of Canadian bonds. (2) For group figures see articles elsewhere in this issue.

(3) Adjusted for number of business days and seasonal variations.

(4) Figures for end of previous month.

(5) Figures for four weeks ending February 27, 1937, and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending January 30, 1937, December 31 and November 28, 1936; January 25, 1936, December 31 and November 30, 1935.

(7) MacLean's Building Review.

(8) Index numbers are adjusted when necessary for seasonal variation.

(9) Revised.

The number of strikes and lockouts recorded for February was 19, involving 2,404 workers with a time loss of 19,346 man working days as compared with 15 disputes in January involving 6,009 workers and a time loss of 67,082 days. Most of the time loss in February was due to strikes of cotton factory workers at Welland, Ont., meat packing employees at Vancouver, B.C., fur factory workers at Winnipeg, Man., and coastwise longshoremen at Vancouver, B.C. In February, 1936, there were only eight disputes, involving 3,071 workers with a time loss of 20,577 days, due chiefly to strikes of cotton factory workers at Three Rivers, P.Q., and dress factory workers at Toronto, Ont. Of the nineteen disputes recorded for February, sixteen were recorded as terminated, six resulting in favour of the employers affected, four in favour of the workers involved, compromise settlements being reached in five cases while the result of one dispute was recorded as indefinite. Three disputes, involving approximately 500 workers, were recorded as unterminated at the end of the month. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or definitely declared terminated by the unions involved.

Substantial decrease in relief totals

Contrary to the relief situation prevailing during recent years in the winter months, when there is usually an increase in relief recipients, recent statistics indicate a substantial reduction in total numbers on relief as shown in the following statement issued on March 11 by Hon. Norman McL. Rogers, Minister of Labour:—

"The improvement in direct relief totals that was evident in January of this year, was even more pronounced during February, according to complete preliminary returns from the Provinces, and it is expected that when confirmed figures are received the comparison with 1936 and previous years will be even more favourable as the confirmed figures for every month since March, 1936, have been consistently less than the preliminary returns. The Dominion totals are very substantially under those of the same month in any of the four preceding years. In comparison with February, 1936, the families on relief exclusive of the Drought Areas, decreased more than 17 per cent, and the total numbers on relief decreased almost 16 per cent. The percentage of decrease in the Dominion totals when the drought areas are included was more than 14 per cent in respect to families and over 13 per cent in respect to the total number.

"In each of the four years prior to 1937, February totals have exceeded those for the month of January, the increase usually having been around six or seven per cent, but this year, it is observed that the total number on direct relief in February in the Dominion is about 1½ per cent under the January total.

"From a comparison of the preliminary returns for January and February of this year with the figure of previous years, and the fact that the usual seasonal advance in relief figures from January to February has not occurred this year, it is very evident that the improvement in general economic conditions and the increases in employment are now having the expected favourable effect on relief figures. The latest figures available which measure the volume of employment in industries other than agriculture, fishing and domestic work are those received by the Dominion Bureau of Statistics from employers, showing the number of persons in their employ as at February 1, 1937. This number is 987,719 and compares with the total of 927,006 reported on February 1, 1936, an increase of 60,713.

"In connection with projects authorized in the Dominion-Provincial Agreements, 10,811 men were afforded 152,933 man-days' work during February, 1937, and were paid in wages $393,484. The Provinces in which works were reported to be in progress were—New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan and British Columbia."

Federal relief disbursements for 1937-38

In anticipation of lower unemployment relief costs in the fiscal year ending March 31, 1938, special supplementary estimates tabled in the House of Commons on March 3 by the Hon. C. A. Dunning, Minister of Finance, indicated a reduction in the grants-in-aid to the provinces. The appropriation in the Special Supplementary Estimates for this purpose in 1936-37 was $26,000,000, as compared with $19,500,000 for 1937-38. However, a further vote in respect of the 1936-37 grants-in-aid will be sought as a supplementary appropriation since the amount voted, for 1936-37 was insufficient to meet the disbursements to the provinces.

The disbursements for grants-in-aid during the last three quarters of the fiscal year ending March 31, 1937, were at the rate of $2,345,657.35 monthly, having been reduced 15 per cent on April 1, 1936, with a further reduction of 10 per cent effective July 1, 1936.

Relief grants-in-aid were initiated in August, 1934, and involved the outright payment of fixed monthly sums to assist the provinces—

and through the provinces, the municipalities—with their relief expenditures. By agreement, these payments were subject to revision every three months.

In addition to the amount designated for grants-in-aid the special supplementary estimates contained an appropriation of $16,288,400 allocated as follows:—

Commitments under relief settlement agreements with provincial governments, $400,000.

Federal contribution to provincial and municipal relief projects, $7,331,000.

Agricultural re-establishment in co-operation with provincial governments, $52,500.

Federal contribution to farm employment and supplementary plans, $3,283,500.

Outstanding claims for direct relief under Unemployment Relief Acts of previous years, $169,000.

Outstanding claims for Drought Area Relief under the Relief Act, 1933, $215,200.

Federal contribution towards Greater Winnipeg Sewage Disposal Scheme, $362,200.

Development and training projects for unemployed young people, $1,000,000.

Direct relief in the dried-out areas, $2,000,000.

Administration expenses generally, $475,000.

Unforeseen contingencies, $1,000,000.

Pensions for the Blind

On March 1, 1937, the Hon. C. A. Dunning, Minister of Finance, introduced a resolution to extend the provisions of the Old Age Pensions Act to "include certain classes of blind persons not included in the Act." In presenting the motion, Hon. Mr. Dunning said that the bill to be based upon the resolution "is to extend the provisions of the Old Age Pensions Act to blind persons at the age of forty." On the basis of the present ascertained numbers of blind persons, the Minister of Finance estimates the cost at approximately half a million dollars per year. Approval to the measure was given on all sides in the House, and the Bill was given first reading without debate. Hon. Mr. Dunning informed the House that with respect to the measure there was complete unanimity of opinion and that "there will be no difficulty in so amending the agreements with the provinces as to make possible the carrying out of the legislation now proposed, to make blind persons eligible for old age pensions at the age of forty."

A similar measure was introduced during the 1936 and 1935 sessions of Parliament (LABOUR GAZETTE, March, 1936, page 220, and July, 1935, page 625).

Social measures of provincial legislatures.

Programs of provincial legislation, as well as economic conditions and trends were indicated in the Speech from the Throne at the opening sessions of several provincial Legislatures during the past month.

In Nova Scotia, continued improvement in the industrial and agricultural life of the province was reported, together with a reduction of 70 per cent in the number of persons receiving relief during the past three years. The loan fund established by contributions of federal and provincial governments had proved "very beneficial in the re-establishment of needy fishermen."

The Speech intimated that provision is being made "for special practical training of the unemployed," and in this respect it was stated: "The Department of Labour has arranged with representatives of employers and employees in the coal mining industry for the placing of auxiliary workers in that industry with a view to distributing employment more evenly and already nearly four hundred young men have been given part time employment under this plan. Arrangements have been completed whereby an additional number of young men from industrial areas will receive training in gold mining under the supervision of skilled gold miners." It was added that efforts would be made to enlist the support of private industries in the institution of an apprentice system, under which young men may acquire a mechanical training. Reference was also made to provincial and municipal co-operation in plans to improve housing conditions. Included in the program of provincial activity was a plan of rural electrification.

Economic recovery in Quebec was reported as "proceeding gradually but surely." Progress in social legislation was summarized in the Speech by reference to various Acts "to ensure honest elections, to improve the lot of workmen, to render the Old Age Pension Act more effective, to procure for farmers and those desirous of becoming farmers the funds of which they may be in need, to help small property owners, to suppress the deception of ill-guaranteed industrial bonds; the Government, while seeing that such laws are enforced, has taken means to have reasonable salaries paid to workmen, to suppress the abuses of certain grantees, particularly of companies supplying electricity."

Reference was also made to the commission investigating the possibilities of improving the legislation providing for collective labour agreements. The revision and co-ordination of provincial laws generally, was forecast as well as legislation "to apply better means

of assisting needy mothers and orphans." Provision for the establishment of provincially owned hydro electric power plants was another feature of the Throne Speech.

The Speech from the Throne opening the Manitoba Legislature recorded "some measure of improvement in certain agricultural areas and definite improvement in certain sections of business and industry" but that many parts of the province suffered considerably from drought, resulting in "little relief from the demands for assistance." The improvement in business "had not been sufficient to provide employment for large numbers still unemployed" with resultant "heavy demands for unemployment relief still being made upon the resources of the province."

Social and labour measures forecast included: a survey of economic and social conditions of the province; enactment of legislation "to prevent strikes and lockouts," and "to provide means of conciliation"; continuation of debt adjustment for farmers and home owners; and the development of credit unions on a co-operative basis, etc.

In the Speech from the Throne opening the Alberta Legislature, appreciation was expressed "to the government of Canada for coming to the aid of our people in the drought areas" and to the Canadian Red Cross Society "for its valuable assistance" in this regard. In spite of increased employment "by enlarged industrial progress and the development of our natural resources," unemployment relief was still a major problem. The Speech referred to new legislation as follows:

"Further enactments regarding the establishment of a new economic order will be presented for your consideration, in order that the distribution and consumption or use of our goods and services may be facilitated with greater equity and efficiency."

The establishment of a provincial marketing board was also forecast.

Changes in the administration of Alberta Services.

Recent orders in council in the Alberta Gazette (issues of January 30 and February 15) announce changes in the administration of certain Acts and regulations. The Boilers Act and its regulations are now transferred from the Minister of Trade and Industry to the Minister of Public Works; the Alberta Government Employment Bureau is to be attached to the Department of Municipal Affairs and to be "under the control and direction of the Minister of Municipal Affairs;" and the duties, powers and functions in connection with the administration of relief are transferred from the Department of Public Health to the Department of Municipal Affairs. A reorganization of the provincial services of Alberta occurred last fall and were noted in the Labour Gazette December, 1936, page 1100.

Postponement of health insurance in British Columbia.

Postponement of the Health Insurance Scheme in British Columbia was announced on February 19, 1937, by Hon. T. D. Patullo, Premier of the province. Following this announcement, Hon. George M. Weir, Provincial Secretary and sponsor of the health insurance plan stated: "In view of the Premier's instructions which conform with the advice of the Cabinet, I am notifying the commission to stay collections." Premier Patullo's telegram to the Provincial Secretary was as follows: "In view of your advice that the Health Insurance Commission will not be able to complete arrangements for operation of the Act by dates fixed please give instructions to postpone operations *sine die* so that an opportunity will be afforded to review the whole situation on my return."

The Act establishing a contributory system of health insurance was passed by the Legislature of British Columbia on March 31, 1936 (Labour Gazette, May, 1936, page 442-23), and registration of employers and employees in preparation for the adoption of the scheme was completed last fall (Labour Gazette, November, 1936, page 977). It was to have come into effect on or about April 1, 1937, and levies on payrolls and wages were scheduled to begin on March 1, 1937 (Labour Gazette, February, 1937, page 126).

According to a press report in the *Victoria Times* of February 19, the British Columbia College of Physicians and Surgeons, announced that doctors of the inland lower mainland had rejected the plan and that other doctors were balloting on it.

Voluntary health insurance plan in three Ontario centres.

A voluntary system of health insurance is to be inaugurated shortly in three Ontario areas by a chartered organization under the direction of the Ontario Medical Association, according to a reported announcement made recently by Dr. W. K. Colbeck, president of that body. The city of Toronto, and the counties of Norfolk and Essex, have been selected on the request of their respective medical societies, it is stated, as the experimental districts for the operation of the plan.

Administered by an incorporated board of physicians and laymen, the plan is reported

to provide full medical services including ordinary surgery and hospitalization. Hospital and physician are selected by the contributors to the scheme who pay for the services on a graduated monthly basis according to the number constituting the insured family.

It is understood that in Toronto and in Norfolk county any citizen regardless of income may participate but that in Essex an income limit of $1,800 has been established.

Labour and Industry Board for Ontario.

Legislation was introduced in the Ontario Legislature on March 1, by the Hon. David A. Croll, Minister of Public Welfare, Labour and Municipal Affairs, to provide for the establishment of a "labour and industry board."

It is intended that the new Board will act as a consolidating agency for the administration of various laws affecting employers and employees. Accordingly, under its jurisdiction will be placed the administration of the Industrial Standards Act, the Minimum Wage Act and the Apprenticeship Act.

The Board, which will consist of five members (three of whom are to be officials of the provincial Department of Labour) will have power to investigate conditions in any industry, to negotiate wage agreements, to fix hours, and, generally, to deal with all questions of employer-employee relationship.

Ontario bill provides minimum wages for men.

Linked with the legislation creating a provincial labour and industry board, Hon. David A. Croll, Minister of Labour for Ontario, introduced a Bill to amend the Minimum Wage Act (at present applicable only to women) establishing a minimum weekly wage for male workers.

The new Board administering this measure will designate and define types of work and define zones to which its orders are applicable. It will classify employees and establish a minimum wage for "the prevailing weekly work period." In addition it will establish the maximum number of hours to be worked regularly, the minimum hourly rates for overtime, and the minimum hourly rates for employees who regularly work less than forty hours a week, providing this rate is less than one-fortieth of the weekly minimum wage.

The legislation will not apply to employees engaged as servants in any private residence or in agriculture.

Minimum wages for men in Quebec

Coincident with the introduction of legislation providing for the establishment of minimum wages for men in Ontario, was the announcement that a similar measure would be enacted shortly in the Quebec Legislature. Such a course of action had been predicted in press reports from Quebec and these were substantiated in a recent announcement by Hon. David Croll, Ontario Minister of Labour, made, apparently, with the approval and authority of Hon. William Tremblay, Minister of Labour for Quebec.

The intention of the Quebec Government in this matter was made known to the members of the Ontario Legislature by the Hon. Mr. Croll when, in speaking to the second reading of the Ontario Bill on March 11, he said:—

"I wonder whether honourable members appreciate the importance of the statement I was able to make to the House before orders were called this afternoon. I had then the authority of the Honourable Mr. Tremblay, Minister of Labour for Quebec, to inform the House that in that province there will soon be brought down a Bill which, if not identical with, will be very similar to the Minimum Wage Act now before you.

"Do honourable members fully appreciate that this spells the end for all time of ruinous competition between similar industries in the two provinces? It means that nearly two-thirds of Canada's population will be living under nearly identical labour laws. It dispels the fear of low wage competition that has haunted the Ontario employer for 50 years or more.

"It lays the ghost of unemployment and low wages that has haunted workers in those industries which have suffered in Ontario because lower rates could be paid in Quebec.

"The announcement I made this afternoon is a historic development in the industrial life of Eastern Canada. For Mr. Tremblay went beyond the statement that his legislation would be equivalent to ours. He agreed with me that the boards administering wage cuts in Ontario and in Quebec would be in constant contact and would co-operate to dispel this mutual fear of inter-provincial competition. I think the gratitude of every member of this House and of every manufacturer in this province is due the Quebec Government, for their far-sightedness in complying with our request that labour legislation in the two provinces be made as nearly identical as possible."

Also somewhat similar in scope to the new labour board in Ontario, as outlined in a

preceding paragraph, is the proposed establishment in Quebec of a central Board for Fair Wages, legislation for which is expected to be introduced shortly. It is understood that the new Quebec Board will have wide powers in the arbitration of wages and working conditions.

Another expected regulation is one which will extend the jurisdiction of the Minimum Wage Commission to work done in homes.

Minimum wages for taxi-cab drivers in Greater Winnipeg.

In the January 1937 issue of the LABOUR GAZETTE (page 4) reference was made to an order of the Highway Traffic Board of Alberta regulating the wages of drivers of public service vehicles. The *Manitoba Gazette* dated January 30, 1937, contains an Order (No. 27) isued by the Taxi-cab Board in accordance with the provisions of the "Taxi-cab Act," dealing with the matter of an application for an increase in taxi-cab fares and drivers' wages in Greater Winnipeg. The Board ordered that:

(1) On, from and after the 15th day of February, 1937, no owner of a taxi-cab shall pay any taxi-cab driver in his employ less than the following minimum wages:

(*a*) To a driver employed by the week, seventeen dollars and fifty cents ($17.50) per week;

(*b*) To a driver employed otherwise than by the week, one dollar and sixty cents ($1.60) for each day on which he is on duty; provided that if he is on duty more than four hours in any one day he shall be paid for such day at least one dollar and sixty cents ($1.60), and an additional amount calculated at the rate of not less than forty cents (40c.) per hour for all time on duty in such day in excess of four (4) hours.

A tariff of fares was also appended to the Order.

Special areas legislation proposed in Great Britain.

In a White Paper issued recently it was indicated that the Government of Great Britain contemplates an outlay of approximately £17,500,000 for war material factories in the distressed areas. This sum, according to a news despatch, will be used to establish plants in Scotland, Wales and Lancashire. It is pointed out that this amount, equivalent to $85,000,000, is in addition to £2,000,000 ($10,000,000) which is to be set aside for loans to industrial undertakings in the areas where unemployment has been particularly severe for several years.

The White Paper stated that a forestry commission had prepared a scheme for planting 200,000 acres in England, which will employ 2,000 workers yearly and permanently settle 1,000 families on forest holdings.

In November, 1936, a report was made by Sir Malcolm Stewart, Commissioner for the Special Acres of England and Wales under the Special Areas (Development and Improvement) Act 1934. This report, the third submitted by the Commissioner, detailed conditions in the special areas in which employment opportunities have been drastically reduced due to changing economic and industrial trends. It is reported that in one coal-mining district alone there are 42 per cent of the workers reported as unemployed.

Among the recommendations made by the Commissioner to relieve the situation were: control of further industrial expansion in Greater London to secure a more evenly distributed production (in which it was hoped that the special areas would share); creation of state provided inducements to attract industries to the special areas; consideration of the removal from the "Live Register" those who have been out of work for over five years and are never again likely to obtain employment; settlement of unemployed families from the special areas in the Midlands and the South; establishment of cottage homesteads in the more prosperous districts for the settlement of families from the special areas, especially in cases where the father is too old for a full time holding, etc.

Unemployment insurance fund in Great Britain.

In the LABOUR GAZETTE for April, 1936 (page 307) reference was made to the report of the Unemployment Insurance Statutory Committee for the year 1935. The Statutory Committee is required to furnish not later than the end of February each year, a report on the financial condition of the Insurance Fund in Great Britain on December 31 of the preceding year. If the fund is in danger of becoming insolvent, or if it is accumulating more money than is "reasonably sufficient to discharge its liabilities," it is required to recommend such changes in rates of contribution or in rates or conditions of benefits as in its opinion are required to make the fund sufficient and not more than "reasonably sufficient, to discharge its liabilities."

The *Economist* for February 27, 1937, points out that a year ago it was found possible, not only to reduce the contributions of employers and workmen to the Unemployment Insurance Fund, but also to estimate a surplus in the operation of the Fund. This surplus for 1936 was reported as being £6,700,000 more than was anticipated and that for 1937 will probably be £12,000,000 more than the previous estimate. The report of the committee recommends that

some £16,500,000 of these surpluses should be devoted during the next eight years, together with interest accruing of £750,000, to the improvement of benefit conditions. The Committee rejected the suggestion of a minority report that the contributions should again be reduced; or that the surplus should be applied to the speedier reduction of the debt which the Fund owes to the Exchequer and is paying off at the rate of £5,000,000 a year. It is proposed to reduce the number of days for which a man must wait after losing his job, before claiming benefit, from six to three (the original "waiting period" of the 1920 Act); and to increase the number of extra days' benefit beyond the present limit for a man who has been fairly regularly in work for five years.

A man who loses his job, however, will still have to wait for anything up to eleven days before drawing any benefit. Nevertheless, the reduction of the waiting period will make it less necessary for men to resort to public assistance in the interim; and some 60,000 fewer men will come under the Means Test because of this measure.

The social consequences of the depression

In a comprehensive study entitled "The Social Consequences of the Economic Depression," by Professor Wladimir Woytinsky, a general picture of the effects of the economic depression in various countries and among different classes of the population is given.

According to this study, published by the International Labour Office, the total loss of the world economic system between 1930 and 1934 as a result of the depression (as far as production, commerce and transport are concerned) amounted in round figures to between 149,000 and 176,000 million "1928 dollars" or from 100,000 to 120,000 million "1913 dollars." "A fateful figure," observes the author, "equal to the total cost of the Great War."

Mr. Woytinsky begins by considering the national income of the various countries, dealing in detail with its composition and its fluctuations in relation to the depression, and showing by a few striking examples the consequences of the depression in a number of countries selected as typical. This leads him to study the incidence of the depression on different classes of the population. Dealing in turn with the employed population, farmers, the middle classes, savings depositors, persons of independent means, and "capitalists," he calculates their losses and studies their reactions—their attempts to escape from the grip of the depression. Then, looking beyond figures, statistical tables and diagrams—many of which he asks the reader to interpret with prudence—he considers the distressing conditions under which millions of human beings have been obliged to struggle for their daily existence during this unprecedented state of economic disorder.

The interest of this work is that it takes to pieces before the reader's eyes the complex mechanism of the modern economic world, demonstrating the interdependence of all economic phenomena, removing many preconceived notions as to the real incidence of the losses caused by the depression and showing, among other things, that while certain social classes have been reduced to extreme poverty others, in the opinion of Mr. Woytinsky, have been able to maintain, if not to increase, their means. Of particular note is the author's conclusion that too much effort has been wasted in attempting to deal with isolated symptoms of the depression, and that a comprehensive view of the problem is essential if a recurrence of this cataclysm is to be prevented.

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

AN application for the establishment by the Minister of Labour of a Board of Conciliation and Investigation under the provisions of The Industrial Disputes Investigation Act was received in the Department of Labour on March 3 from certain employees of the Canadian Marconi Company, being coast station telegraphers, ships' telegraphers and trans-oceanic telegraphers, members of Canadian Marconi System Division No. 59, Commercial Telegraphers' Union. The employees seek revision of the wage agreements (Marine and Trans-oceanic) entered into in 1929; also changes in certain operating practices. Two hundred employees are stated to be directly affected by the dispute.

A Board of Conciliation and Investigation was established by the Minister of Labour on February 10 to deal with a dispute between the London Street Railway Company and its motormen, conductors, bus operators, shopmen, barnmen, trackmen, etc., members of Local Division No. 741, Amalgamated Association of Street and Electric Railway Employees of America. The application in this case had been received from the employees during January (LABOUR GAZETTE, February, 1937, page 131). The Board is composed as follows: Mr. H. H. Ward, Ottawa, chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other Board members; Mr. J. F. White, of London, Ontario, and Mr. Fred Bancroft, of Oakville, Ontario, nominated by the company and employees respectively.

STRIKES AND LOCKOUTS IN CANADA AND OTHER COUNTRIES DURING THE YEAR 1936

THE number of strikes and lockouts in Canada during 1936 was substantially greater than in 1935 but the increase in the number of workers involved was slight and the time loss in man working days was appreciably lower. All figures were much lower than in 1934 and, as in the case of each year since 1932, substantially higher than for previous years back to 1925, the last year in which coal mining disputes accounted for a very large percentage of the time loss. In 1936, the time loss for coal mining disputes was lower than in 1934 and 1935, but somewhat higher than in 1929, 1930, 1931, and 1933. The industries for which most time loss appeared were textile and clothing manufacturing, mining, fishing, logging, manufacturing of fur and leather products.

The outstanding disputes involved textile factory workers at Cornwall, Ont., loggers and saw and shingle mill workers in Vancouver Island and in the coast district on the mainland of British Columbia, cotton factory workers at Three Rivers, Que., fur workers at Winnipeg, Man., coal miners at New Waterford, New Aberdeen and at Glace Bay, N.S., cotton factory workers at Welland, Ont., taxicab drivers at Montreal, also a strike of salmon fishermen at Rivers Inlet, B.C.

As in 1935, the year was marked by the large proportion of disputes which involved comparatively small numbers of workers, and

TABLE I.—STRIKES AND LOCKOUTS IN CANADA BY YEARS, 1901-1936

Year	Number of disputes beginning during the year	Disputes in existence during year									
		All Industries				Coal Mining			Industries other than Coal Mining		
		Number of disputes	Number of employers	Number of workers involved	Time loss in man-working days	Number of disputes	Number of workers involved	Time loss in man-working days	Number of disputes	Number of workers involved	Time loss in man-working days

* In these totals figures for disputes extending over the end of a year are counted more than once.

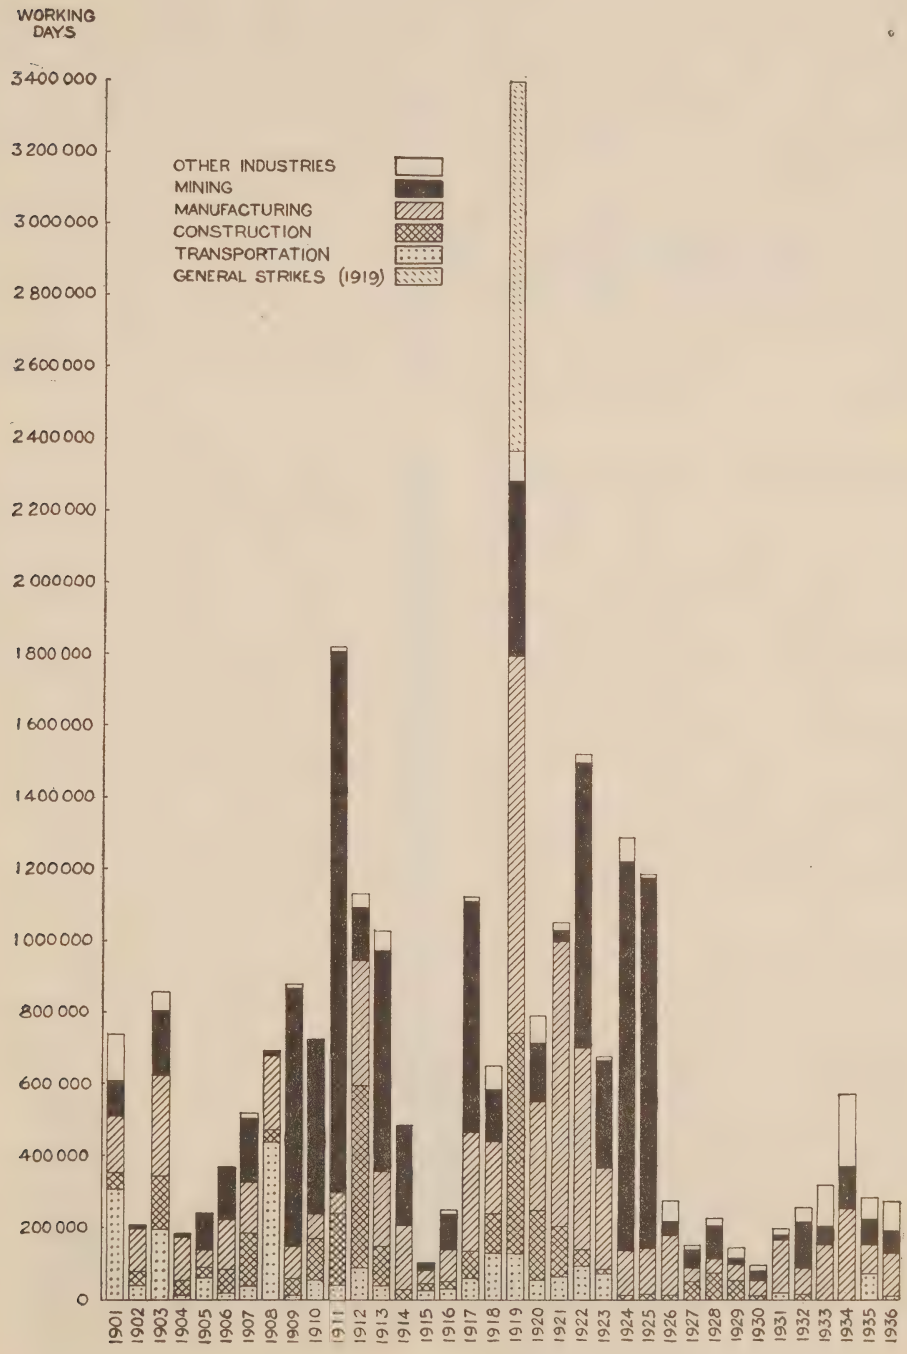
resulted in little time loss. A feature of the year, however, was the increase in the proportion of the disputes arising out of union questions, the number of such disputes exceeding for the first time those due to demands for changes in wages and working conditions. This was owing to the substantial increase in the number of strikes for union recognition and against discharge of workers for union membership or activity. Strikes due to causes other than union factors, wage changes, etc., were relatively few in number.

The accompanying table of strikes and lockouts in Canada from 1901 to 1936, inclusive, gives figures as to all disputes, as to coal mining separately, and for those in industries other than coal mining. For many of the years the figures for coal mining account for very large percentages of the numbers of employees involved and of the time loss incurred. It will be observed that since 1925 the figures for coal mines have been comparatively small.

Compilation of Statistics

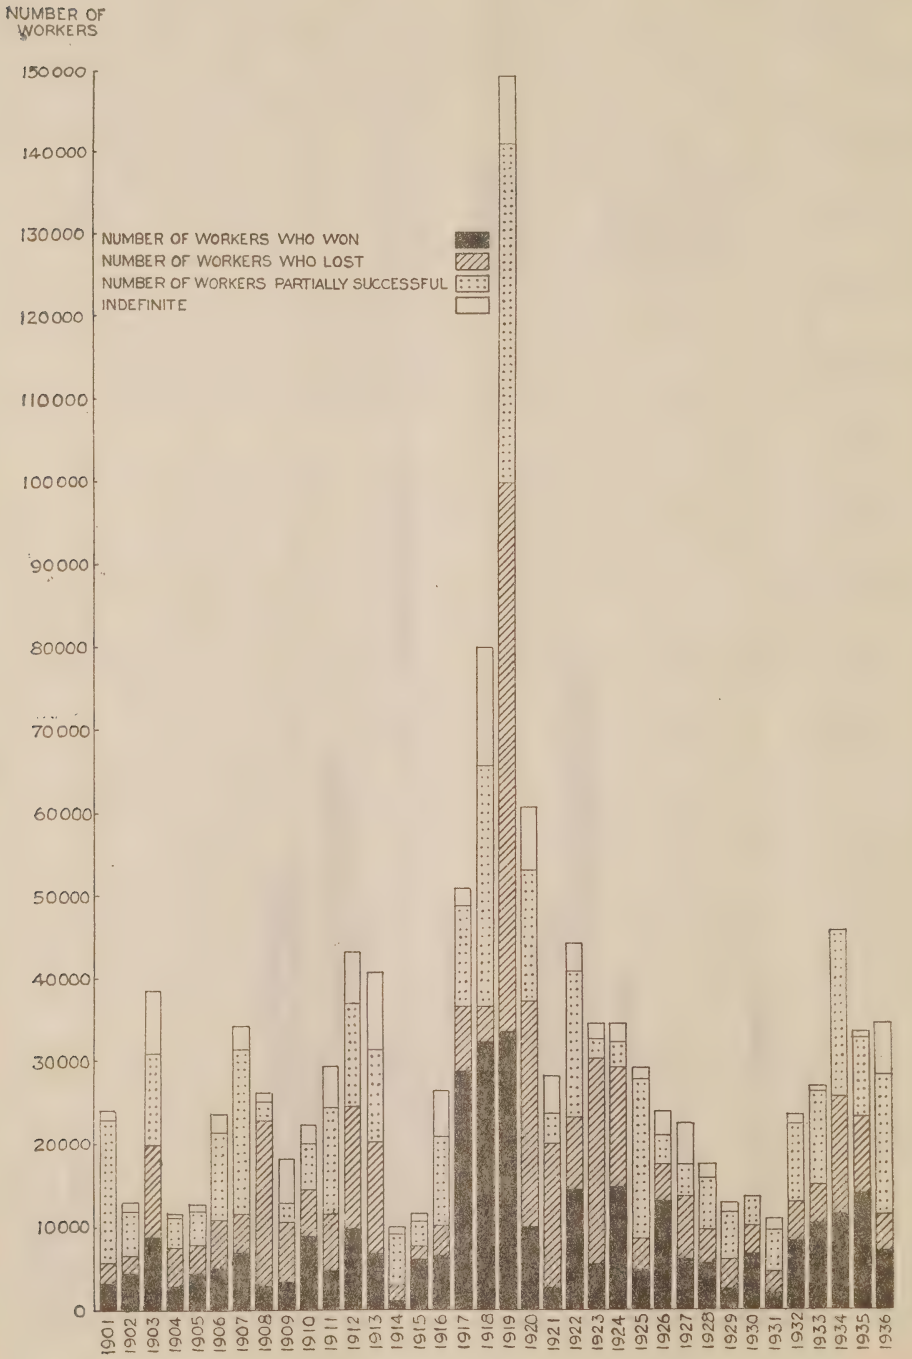
Since its establishment toward the end of 1900 the Department of Labour has maintained a record of strikes and lockouts in Canada, publishing in the LABOUR GAZETTE each month a complete list of those in progress, so far as available, with particulars as to the nature and result of each dispute. Early in each year a review of the previous year has been given, including statistical tables analyzing the data, and since 1912 including a complete list of the disputes on record during the year. As the monthly statements in the LABOUR GAZETTE are necessarily of a preliminary nature the annual review constitutes the revised record for the year. A special report on "Strikes and Lockouts in Canada 1901 to 1912," issued in 1913, contained a complete list of strikes and lockouts for that period with analytical tables. The annual reviews in the LABOUR GAZETTE have brought the lists of disputes and analytical tables down to date each year.

The annual review for 1930 appearing in the LABOUR GAZETTE, February, 1931, included summary tables back to 1901, the result of a revision of the record on the basis of the classification of industries adopted by the Dominion Bureau of Statistics and other government departments for official statistics. This classification had been used for strikes and lockouts since 1921, and it was advisable to have the record for earlier years on the same basis. Other revisions to secure uniformity throughout the whole period were also made.



The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together, the term dispute being used with reference to either.

A strike or lockout included as such in the records of the Department, is a cessation of work involving six or more employees and lasting one working day or more. Disputes of less than one day's duration and disputes involving less than six employees have not been included in the published record unless a time loss of 10 days or more is caused. A separate record of such disputes involving less than 10 days' time loss is maintained in the Department. Although not included in the statistical record, such disputes are mentioned in the LABOUR GAZETTE at the time of their occurrence. During 1936 there were 27 such disputes, involving 419 employees, causing a time loss of 101 working days.



The figures in this report are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. As to duration of strikes, numbers of employees concerned, etc., it is impossible always to secure exact information, but the estimate made in such cases is the result of painstaking methods in the collection of data, and with increasing experience in dealing with the subject it is believed that the statistics indicate the conditions with reasonable precision. The estimate of time loss is reached by multiplying the number of working days during which each strike lasted by the number of employees directly involved in the dispute from time to time so far as known and not replaced. The number of employees recorded for each dispute is the number of those directly involved, that is on strike or locked out, and does not include those indirectly affected. The figures in the tables as to workers are therefore the number of those directly involved. In recent years, when the information is available, the number indirectly affected has been shown in footnotes to Table X, which is a detailed list of the strikes and lockouts during the year. The workers indirectly affected in each dispute are those in the establishment who are unable to continue work because of the stoppage but not participating in the dispute.

The statistical tables do not include minor disputes as described in a previous paragraph, nor disputes (previously recorded) as to which information has been received indicating that employment conditions are no longer affected,

LOSS IN MAN WORKING DAYS THROUGH STRIKES AND LOCKOUTS BY GROUPS OF INDUSTRIES EACH YEAR 1901-1936

RESULTS OF STRIKES AND LOCKOUTS ACCORDING TO NUMBERS OF WORKERS INVOLVED EACH YEAR 1901-1936

but which the unions or organizations concerned have not yet declared terminated.

Information is available as to the following disputes of this nature which were carried over from 1935 but were called off or lapsed during 1936: photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., commenced May 4, 1931, one employer, reported as lapsed by the union at the end of October, 1936; and moulders, Peterborough, Ont., commenced February 27, 1934, one employer, lapsed by December 31, 1936. The following disputes of the same nature were still on record at the end of 1936: motion picture projectionists, Toronto, Ont., commenced July 11, 1932, two employers; glass factory workers, Hamilton and Wallaceburg, Ont., and Redcliff, Alta., August 19, 1936, one employer; and coal miners, River Hebert, N.S., commenced October 23, 1936, one employer.

Charts

The accompanying chart of the time loss in working days by groups of industries for each year back to 1901, shows that in Mining considerable time loss occurred in 1909, 1910, 1911 and 1913, and again in 1917, 1922, 1924 and 1925, while in 1932 and again in 1934, time loss was greater than since 1925. In 1919 the time loss due to general strikes is shown separately. In manufacturing considerable time loss occurred in metal manufacturing in 1919 and 1920; in clothing (including textiles, furs, boots and shoes, leather, etc.) in 1903, 1908, 1912, 1914, 1917, 1919, 1925, 1926, 1930, 1931, 1932, 1933, 1934 and 1936; in cigar manufacturing in 1901; in printing in 1921, 1922, 1923 and 1924; and in saw-milling in 1931 and 1932. In Construction time loss was considerable in 1912 and 1919. In Transportation, etc., there was considerable time loss only in 1901, due to a strike of trackmen; in 1903 due to a strike of railway clerks and freight handlers throughout western Canada, and a strike of longshoremen at Montreal, with a sympathetic strike of teamsters; and in 1908, due to a strike of railway shop machinists. In Other Industries considerable time loss was due to strikes of fishermen in 1901, to strikes of loggers in 1919, 1920, 1933, 1934 and 1935.

From the chart showing results of the disputes it appears that the majority of employees were successful or partially successful in 1901, 1902, 1907, 1915, 1916, 1917, 1918, 1926, 1930, 1931, 1932, 1933, 1934, 1935 and 1936, but were unsuccessful in 1908, 1921 and 1923. In 1919, a large percentage of the workers who were unsuccessful were involved in the general strike at Winnipeg and in general strikes in other localities in sympathy with it.

Review of Disputes by Industries 1936

Agriculture.—One strike only was reported but it was of large proportions, 1,100 sugar beet workers in Alberta going on strike for ten days in May to secure an increase in piece rates. A higher rate was gained but all did not share in the result, a number having been replaced. An attempt to bring about a strike of beet field workers in Kent County, Ontario, was unsuccessful. It is interesting to note that only four strikes were reported in this industry during the period 1901-1932 (three of British Columbia hop pickers and one of Ontario tobacco farm workers). In both 1933 and 1934, hop pickers in British Columbia were on strike. Five strikes in agriculture occurred in 1935, two of hop pickers in British Columbia, one of tobacco farm workers in Ontario, and two of sugar beet workers—one in Alberta which resulted in a compromise, and the other in Ontario which was unsuccessful.

Logging.—In Vancouver Island and in the coast district of British Columbia one of the largest strikes of the year occurred, that of 2,000 loggers, saw and shingle mill workers who stopped work demanding union recognition and increased wages. Although the strike was not successful, wage increases were granted by some of the employers involved and by others not involved. During this dispute, a number of pickets were arrested on charges of intimidation and assault. Long duration marked a stoppage of work by 140 loggers at Cowichan Lake, B.C., caused by the discharge of two men, allegedly for union activity. About 120 other loggers in the same locality were out in sympathy. The other three strikes in the logging industry, all in Ontario, involved comparatively few employees and were of brief duration.

Fishing.—Three strikes were recorded in this industry, all involving salmon fishermen in British Columbia. One of these strikes at Rivers Inlet involved directly 2,500 fishermen who ceased operations on July 5 to enforce a demand for an increase in the price received per fish. Canning operations in the district were curtailed. This dispute had no definite result, and terminated with the close of the season. The other two disputes involved small numbers of employees and lasted only a few days, being terminated by flood conditions on the Fraser River.

Mining.—One fifth of the total time loss in 1936 was recorded for the coal mining industry. There were also two small strikes of gold miners in British Columbia. All of the strikes of coal miners were in Alberta and

TABLE II.—STRIKES AND LOCKOUTS, 1936, BY NUMBER OF WORKERS INVOLVED

Nova Scotia, the latter province having the most serious stoppages.

In the Glace Bay district of Cape Breton Island more than 1,400 miners stopped work on August 7 to secure an increase in piece rates followed by 3,000 others in support. All were back at work on August 18, a compromise offer having been accepted. This dispute caused a time loss of 22,000 man working days. Three other strikes directly affecting 2,400 miners occurred during the year in the same district to secure changes in wages, piece rates, and adjustments in working conditions. Strikes in this district during 1936 were responsible for two-thirds of the time loss in mining.

The most important strikes of coal miners in Alberta included one at East Coulée to secure union recognition, and another at Wayne to secure the district union wage scale. Both were successful.

MANUFACTURING.—The disputes in various manufacturing industries in 1936 accounted for 45 per cent of the time loss and 43 per cent of the number of workers involved in all strikes. Two-thirds of the time loss in manufacturing was the result of strikes in the textile and clothing industries, strikes in silk and cotton mills alone causing a loss of nearly 64,000 man days, more than half of the time lost in the manufacturing group. No strikes were reported in the woollen textile industry.

The most serious strikes of textile workers were in an artificial silk factory at Cornwall, Ont., and in cotton mills at Three Rivers, P.Q., and at Welland, Ont. The silk workers at Cornwall, whose walkout on August 11 developed into the second largest strike of the year in all industries, involved some 1,750 male and female workers. They de-

(Continued from page 273)

manded recognition of the Rayon Workers' Industrial Union of Cornwall (which during the strike affiliated with the United Textile Workers of America); also a closed shop agreement providing for wage increases; a 40-hour week and improvement in working conditions. The establishment was closely guarded by pickets and this led to a clash with police who arrested sixteen of the pickets on charges of intimidation, obstruction of traffic, etc. These were released on bail (one after an interval), receiving suspended sentences later. Provincial police detachments were sent to Cornwall to help maintain order and permit the movement of goods (produced before the dispute) out of the plant in trucks. Conciliation by the Ontario Department of Labour not resulting in a settlement, the Member of Parliament for the district requested the assistance of the Federal Department of Labour. Negotiations were postponed until the arrival of the president of the company from England. Conferences then held were finally broken off, the management objecting to the participation of a representative of the international union. The Department of Labour conciliation officer, however, brought about further conferences between the management and a committee of union employees and the demand for a union agreement and closed shop was withdrawn. A settlement was reached providing for a general wage increase of five per cent and certain improvements in factory conditions particularly as to number of machines per worker, ventilation and acid fumes. No discrimination between union and other employees was agreed upon, although a few specified persons were not to be taken back. Work was resumed to some extent on September 5, and operations were extended to the various departments in about three weeks.

The strike of cotton workers at Three Rivers, P.Q., on February 19 was for recognition of union, increases in wages, improved conditions of work, and a committee to deal with grievances. Following the outbreak of the strike, the company closed down the plant. Representatives of the Federal Department of Labour interviewed the parties concerned with the result that the demand for union recognition was dropped as well as the wage demands. The company agreed to re-employ the strikers without discrimination but refused reinstatement of the union president and one other person dismissed for cause. The stoppage continued until February 29 when the strike was called off, the Minister of Labour having assured the strikers that the affairs of the company would be investigated by the Royal Commission on the Textile Industry.

A strike of 865 cotton factory workers at Welland on Dec. 22 to secure a wage increase of 20 per cent instead of 6 per cent was unterminated at the end of the year. Six other disputes in textile mills involved comparatively few employees and were of short duration, four of them occurring in December.

In clothing manufacturing, strikes of dress factory workers at Toronto, women's coat and suit workers, Toronto, dress cutters at Montreal, and work clothing workers at Winnipeg, involved substantial numbers of workers but not for long periods. The securing or continuation of union wages or agreements was the principal cause in these and all were successful. There were also 19 other disputes involving clothing workers, hat workers, etc., affecting only small numbers of workers for comparatively short periods. A strike of bag factory workers at Walkerville from September to November, to secure wage increases, was partially successful and was settled by conciliation of the Department of Labour.

In furniture manufacturing, seven strikes occurred, chiefly for increases in wages or changes in working conditions, union recognition being a factor in three. All were of brief duration. None caused great time loss. There were also five strikes of woodworkers, two in the Province of Quebec causing appreciable time loss. Increases in wages, improvement in working conditions and union recognition were the principal causes. In the furniture and woodworking group most of the disputes resulted in compromises.

In metal and other mineral manufacturing there were eight disputes, a strike of glass workers at Hamilton, Ont., and a sympathetic strike of glassworkers at Wallaceburg, Ont., and Redcliff, Alta., being the most important. Union recognition and increase in wages were the chief causes.

CONSTRUCTION.—None of the disputes involved large numbers of workers or caused much time loss.

TRANSPORTATION AND PUBLIC UTILITIES.—The dispute causing most time loss involved coastwise longshoremen at Vancouver, B.C., from November 23, being unterminated at the end of the year. The employers had refused to recognize the international union with which the longshoremen's union had become affiliated, and during a strike in the United States the Vancouver local declared a strike although most of the members were not employed. Six strikes of longshoremen at lake ports in Ontario occurred, all being of brief duration, with wage increases as the chief cause. A dispute in Nova Scotia involved pulpwood loaders. Two strikes of taxicab drivers in Montreal, P.Q., and a lockout of union taxicab drivers in Winnipeg, Man., caused considerable time loss.

TRADE.—The only dispute involved seventeen scrap metal workers in one establishment in Toronto, Ont., an alleged lockout of union members who were replaced within a short time.

SERVICE.—A number of automobile mechanics in Toronto, Ont., ceased work in July and August for a union agreement, wage increases and reduced hours, being unsuccessful. A strike of fifty workers in one restaurant in Toronto from May to October, for reinstatement of union workers, was unsuccessful. A strike of beverage dispensers in August in ten hotels for union wages, etc., was successful and union agreements were secured for most of the smaller hotels in the city. A strike of hotel employees at Windsor, Ont., involved thirty-four workers from October 8 to November 13. There were also nine disputes in restaurants in various cities, none involving large numbers of employees for long periods.

Analysis of Statistics, 1936

Table I is a summary of the principal statistics for the period for which the record has been compiled beginning in 1901. The table shows the number of disputes beginning in each year and the number in existence during the year, the difference in each case being the number of disputes carried over the end of the previous calendar year. A small number of disputes have been carried over at the end of every year except 1903, 1929 and 1934. The approximate number of employers involved in all disputes as well as the number of workers involved and the time loss, is given. In addition to these data, the number of disputes in existence during each year in coal mining and in industries other than coal mining is given, along with the number of workers involved and the time loss. A study of the latter figures reveals that a few disputes in coal mining in some years account for a large proportion of the workers involved and for a still larger proportion of the time loss resulting.

Table II, an analysis by numbers of workers involved, shows that eleven disputes involved over one-half of the workers and caused over one-half of the time loss during the year and that most of the other disputes involved relatively small numbers of workers and in most cases did not cause great time loss.

Table III gives an analysis by time loss and shows that there were eight disputes which caused a time loss of from 10,000 to 50,000 man working days in each case, and that these eight involved forty-two per cent of the workers and caused 58·7 per cent of the total time loss for the year. The analysis, on the other hand, indicates that there were 55 disputes in which less than 100 days' time loss resulted; also 45 which caused time loss of 100-500 man working days, and 30 from which 1,000-10,000 days were lost and that these thirty disputes accounted for and resulted in approximately one-third of the workers and time loss respectively.

Table IV, an analysis by duration—that is the number of working days in the period during which each dispute was in progress—shows that 77 disputes, or nearly one-half, lasted less than five working days, involved 36·1 per cent of the workers and resulted in 10·2 per cent of the time loss; that 31 disputes lasted from five to nine working days, sixteen from ten to fourteen days, while twelve lasted twenty-five working days or more and resulted in nearly one-quarter of the time loss; also that five disputes were either unterminated or carried over from 1935.

Table V, an analysis by provinces, shows that 80 disputes, slightly over one-half of the total for the year, occurred in Ontario, involving 31·9 per cent of the workers and resulting in 31·8 per cent of the time loss; that there were 20 disputes in Quebec, involving 17 per cent of the workers and causing 12 per cent of the time loss; that the 11 disputes in Nova Scotia involved 20·4 per cent of the workers, while the 15 disputes in British Columbia, involving 16·4 per cent of the workers, resulted in 27·1 per cent of the time loss, just slightly less than that in Ontario On the other hand, there were 14 and 13 disputes in Alberta and Manitoba respectively, only one small dispute in Saskatchewan, one in Prince Edward Island, and one recorded as Interprovincial with none in New Brunswick.

Table VI, an analysis by industries, shows that, as in recent years, about one-half the disputes occurred in manufacturing. These included 33 disputes in textiles, clothing, etc., 13 in furs, leather, etc., 12 in miscellaneous wood products, 8 in vegetable foods and four each in boots and shoes, metal products, and in non-metallic minerals, etc. There were 6 disputes in logging, 3 in fishing and 22 in mining (the latter involving practically one-quarter of the workers and resulting in one-fifth of the total time loss), 17 in service, 14 of which were in the group "Business and Personal" (largely restaurant workers), and 15 disputes in transportation. These included a number of disputes involving longshoremen at lake ports in Ontario, two taxicab disputes in Montreal and one in Winnipeg.

Table VII, an analysis by causes and results, shows that union questions predominated among the causes, disputes as to changes in wages being next in frequency, while 17 disputes were recorded under "Other causes affecting wages and working conditions." Discharge of workers was the cause in 5 disputes

and employment of particular persons caused one, while 6 disputes were in sympathy with other strikes and two were unclassified as to cause. The workers were successful in 61 disputes, involving 6,950 workers, and were partially successful in an additional 44, involving 16,907 workers, while they were unsuccessful in 36 disputes involving 4,575 workers. Fifteen disputes were unterminated or recorded as indefinite in result.

Table VIII, an analysis by industries and methods of settlement, shows that 77 disputes were settled by direct negotiations between the workers and employers, or their representatives; that conciliation was succesful in the settlement of 31 disputes, involving approximately 10,000 workers, the same number as in disputes settled by direct negotiations. Arbitration was the method of settlement in six disputes and in three of these conciliation had resulted in the reference to arbitration, all being in the province of Quebec. Sixteen disputes were terminated by replacement of the strikers, and in fourteen disputes the strikers returned to work without securing their demands.

Table IX gives an analysis by months for the past eleven years, showing the number of disputes commencing during each month, as well as the number of disputes in existence, and the number of workers involved each month, both in new disputes and in all disputes in progress, with the total time loss by months. This table shows that the greatest number of disputes during a year generally occurs in May and that the greatest time loss generally occurs in July. Since 1930, May has not been the month in which the largest numbers of disputes occurred, partly because there have been comparatively few strikes in building trades in recent years. The months marked by large numbers of disputes and heavy time loss have, therefore, varied from year to year. In 1936, August showed the largest number of disputes, workers involved and the greatest time loss, while the quarter year including July, August and September greatly exceeded the others in these three respects.

Table X gives the list of strikes and lockouts occurring during the year, with details as to causes, results, etc.

Strikes and Lockouts in Other Countries during 1936

The accompanying table gives the principal figures as to strikes and lockouts in other countries since 1919, as compared with Canada, showing the number of disputes (strikes and lockouts), the number of employees involved in stoppages of work and the time loss in man working days in those countries for which such figures are available.

In some of these countries figures as to strikes and lockouts are published separately, but in the table here given they have been included together. The practice varies greatly in the various countries, also in regard to other points. In some cases the number of strikes and lockouts shown for a year is the number beginning during the year, in other cases it is the number ending during the year, and in still other cases it is the number in existence during the year, including those carried over from the previous year with those beginning during the year.

The figures as to the number of employees involved published by some countries show not only the number of employees directly involved, but also the number of those indirectly affected, that is thrown out of work by disputes to which they are not parties; but exact information as to this point is not always given. In the table given herewith the column showing numbers of employees involved includes figures for the numbers directly involved or the total number directly and indirectly involved according to the method adopted by the country concerned.

For some countries, figures as to time loss, that is the number of "man working days" lost, are not given.

Footnotes to the table indicate the nature of the statistics with reference to the above points. Many countries publish these statistics only once each year or less frequently, the figures being issued in some cases after an interval of some length.

In the following notes as to some of the important disputes in various countries in the year 1936, the information is taken as far as possible from official sources, but where the information is not thus available, newspaper reports have been used.

Great Britain

Although the number of disputes in 1936 was considerably greater than for the previous year and the highest for any year since 1920, the total number of workers involved was only slightly higher and the time loss was less than for 1935. In most of the disputes only one firm was involved and the average number of workers and the average duration was relatively small. One-third of the total number of disputes in 1936 were in the coal mining industry.

During the first part of February, 8,000 London meat market workers were on strike for eight days due to the alleged delay of the conciliation board in settling certain wage claims. Work was resumed February 11 on the understanding that the board should meet immediately. The result of this conciliation was an increase in wages for certain of the lower-paid men.

At Leeds, 8,000 clothing workers were on strike from February 20 to March 13, for an increase in wages for fitters. Work was resumed pending investigation of the fittters' claim by the trade union.

Belgium

An extensive strike movement which began June 4 with a strike of dockworkers at Antwerp spread rapidly to transportation industries between June 4 and June 11 and to other industries between June 11 and June 30, reaching almost the proportions of a general strike and involving a total of 470,000 workers. The general demands were for increases in wages, holidays with pay, a 40-hour week and the right of association. The Prime Minister called representatives of both parties together and a draft agreement was drawn up which by the end of June had been ratified and work was resumed in several industries, but the stoppages continued in some cases, until the end of July. The agreements provided, in principle, for a minimum wage for adult male workers and a suitable adjustment of family allowances, six days' annual holidays with pay, the free right of association and a gradual reduction of the week to 40 hours for dangerous or unhealthy work. Legislation was passed making general the last three of these measures.

France

Beginning late in May a serious strike movement began in the metal and engineering trades in the Paris area. In the first few days of June the movement had spread throughout the country and to many industries. Government statistics show that while between 8,000 and 13,000 were involved in all disputes beginning in each of the first five months of the year, 1,831,000 were involved in the disputes beginning in June. For the most part, the "stay-in" strike was adopted, the workers remaining in the establishments. The demands included increases in wages, the 40-hour week, elimination of overtime, holidays with pay, trade union rights and collective agreements. Legislation was enacted during June providing for: an annual holiday of 12 working days with pay after one year's continuous employment in the establishment to all workers in industry, commerce and the professions; the gradual introduction of the 40-hour week by Cabinet decree, after consultation with the parties concerned; authorization of the Minister of Labour to call a joint meeting for the purpose of reaching a collective agreement in any industry, and the subsequent power of the Minister of Labour to make such agreements binding on all employers and workers in the occupations and districts concerned; the inclusion in such agreements of the right of association of the workers and other provisions.

Following a call by the Prime Minister, a joint conference of employers and unions was held, and on June 8 a general agreement was reached on points not covered by the legislation. Collective agreements were to be negotiated immediately, to provide for increased wages and for the workers' right to trade union membership. As individual employers and industries accepted the general agreement, work was resumed and most of the strikers had returned to work by the end of June although some strikes continued into or began in July to secure satisfactory agreements.

Further strikes occurred later in the year while negotiations were in progress to implement the general agreement. The textile industry in the Lille and Vosges districts were disturbed by strikes involving in all about 65,000 workers from one to three weeks in September which resulted in wage increases. A strike of 16,000 workers in the metal industry in the Maubeuge area began November 27, and was settled by agreement on January 5.

Poland

At Lodz and in other districts, 125,000 textile workers were on strike from March 11 to March 15, demanding a six-hour day and an agreement covering all mills. The settlement reached provided for a 46-hour week. Certain concessions were granted the workers and the Government Inspector of Labour was to endeavour to bring all mills under the terms of the agreement.

United States

The strikes in the automobile manufacturing industry at the close of the year constituted the first extensive stoppage of work in this industry and the first widespread dispute in which the "stay-in" method was used. Workers in this industry were for the first time extensively organized in the summer months of 1936, in the United Automobile Workers of America. A series of "sit-down" and "stay-in" strikes in automobile and automobile parts manufacturing plants began

33833—3½

towards the end of November. The demands varied, but in most cases concerned alleged discrimination against union members, as well as working conditions and wage increases. Some of these were settled by the end of the year, in most cases in favour of the employees while in other cases the disputes merged into a strike of 135,000 workers in the plants of the General Motors Corporation in Flint, Michigan, and other localities in fourteen states in January. Recognition of the United Automobile Workers of America as the collective bargaining agency for all workers was demanded. Following conciliation by the Federal Labour Department and later by the Governor of Michigan, a settlement was reached early in February, the corporation agreeing to negotiate only with the union during the next six months for the plants involved in the strike, subject to certain conditions.

Shipping on the Pacific Coast both ocean going and coastal was interrupted to a great extent during the strike of 40,000 seamen, longshoremen and other marine workers which was in effect from October 30, 1936, to February 4, 1937. The dispute was over the demands of the strikers for the continuance of the control of hiring halls, cash payments for overtime for seamen and other concessions.

On November 1, about 15,000 seamen of the Atlantic and Gulf Coasts went on strike in sympathy, demanding equally favourable conditions. This latter strike was not recognized by the seamen's union which continued to supply workers and this strike was abandoned January 24, 1937. On the Pacific Coast the dispute was settled February 4, 1937, by the granting of wage increases to all except longshoremen, and cash payments for overtime. Longshoremen and all other unions except the Masters, Mates and Pilots and the Marine Engineers secured full control of their hiring agencies.

A strike of 14,000 tire and rubber workers at Akron, Ohio, was in effect from February 17 to March 21 and resulted in an agreement providing for a week of 30 to 40 hours and that notice should be given employees of any changes in wages and of lay-offs.

Elevator operators and other building service workers, 33,000 in number, employed in apartment houses, hotels and office buildings in New York City were on strike from March 1 to March 16, when work was resumed pending arbitration. The arbitration awards later established minimum wage rates which were substantially as demanded by the strikers.

(p) Since 1926, stoppages of work on account of industrial disputes have been illegal and none have been officially reported. (q) Strikes and lockouts. (r) Since April, 1933, stoppages of work on account of industrial disputes have been forbidden by law.

Employment in Hotels and Restaurants

In response to a request from the Hotel and Restaurant Employees and Beverage Dispensers International Alliance, the Women's Bureau of the United States Department of Labor, undertook a survey of employment conditions in hotels and restaurants, two of the chief woman-employing industries in the United States. The results have recently been published in Bulletin No. 123 of the Department.

Important information is presented for a number of localities regarding the actual hours of work in relation to the day's spread of hours, week's earnings correlated with hours worked, and supplements to wages in the form of meals and lodging. Employers' policies regarding overtime and part time, tips, and uniforms are touched upon.

STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1937

THE following table shows the number of disputes, workers involved, and time loss for February, 1937, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Feb. 1937	19	2,404	19,346
*Jan. 1937	15	6,009	67,082
Feb. 1936	8	3,071	20,577

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes".

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

While the number of disputes on record in February was somewhat larger than in January, the number of workers involved and the time loss incurred were substantially lower as there were no disputes involving large numbers of workers for many days. The strike of cotton factory workers at Welland, Ont., which accounted for considerable time loss in January was terminated early in February. Strikes of loggers in Northern Ontario and asbestos miners in Quebec had also caused considerable time loss in January. Most of the time loss in February last year was due to strikes of cotton factory workers at Three Rivers, P.Q., and dress factory workers at Toronto and these involved nearly 3,000 workers.

Eight disputes, involving 1,566 workers, were carried over from January, and eleven disputes commenced during February. Of these nineteen disputes, sixteen terminated during the month, six resulting in favour of the employers affected, four in favour of the workers involved, compromise settlements being reached in five cases, while the result of one dispute was recorded as indefinite. At the end of February, therefore, there were on record three disputes recorded as strikes or lockouts, namely: meat packing workers, Vancouver, B.C., fur factory workers, Winnipeg, Man., and longshoremen (coastwise work), Vancouver, B.C.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to four such disputes, namely: motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; glass factory workers at Hamilton and Wallaceburg, Ont., and Redcliff, Alta., August 19, 1936, one employer; shoe factory workers, Toronto, Ont., January 14, 1937, one employer; and restaurant employees, Toronto, Ont., February 1, 1937, one employer, the last two being added to the list during February as noted elsewhere in this article. Two disputes carried in the list for some months have been removed during February, namely: moulders, Peterborough, Ont., February 27, 1934, one employer, which is recorded as lapsed; and coal miners, River Hebert, N.S., October 23, 1936, one employer, which was terminated during February as noted in a subsequent paragraph.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence or allowances for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

The dispute involving coal miners in one colliery at River Hebert, N.S., which began on October 23, 1936, the mine being closed on November 16, was settled on February 16. The employees had demanded an increase in wages. The agreement did not provide for this and when the mine is reopened only about one-half of the former employees will be required. Mining operations will not be resumed until the mine is pumped out and equipment made ready which was expected to be done by April.

A minor dispute involved eight building workers at Toronto for one day, February 9, demanding union wages and hours, in which they were successful.

A strike of silver miners at Mayo, Yukon Territory, on February 11 has been reported in the press, lower rates for board being demanded. Particulars have not been received.

The following paragraphs give particulars regarding certain disputes in addition to the information in the tabular statement.

Coal Miners, Round Hill, Alta.—Employees in two collieries ceased work on January 28, demanding increases in wages of 40 cents per day. Wages for helpers and labourers were increased 20 cents per day, contract

rates by five cents per car, and work was resumed on February 4.

MEAT PACKING WORKERS, VANCOUVER, B.C.—On February 23 the government of British Columbia appointed Mr. Justice J. C. McIntosh a Commissioner under the Public Inquiries Act to inquire into the dismissal of employees, to report on the effect of the strike, and to endeavour to bring about a settlement. In January, mediation by the provincial Deputy Minister of Labour and the western representative of the Federal Department of Labour had not resulted in a settlement and the employees involved had requested the appointment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act. As the dispute is in an industry where a board can be appointed only with the consent of both parties, the western representative of the department interviewed the president of the employing company at Calgary but consent was not given. At the request of the employees and various organizations, the provincial government, therefore, appointed a commission. On February 5 the proprietor of several meat stores applied for an injunction against the picketing of the stores by the union involved and also entered an action for damages. At the end of the month the dispute was reported unterminated.

FUR FACTORY WORKERS, WINNIPEG, MAN.—No proceedings in the inquiry by a Commission under the Manitoba Evidence Act were reported during February, hearings having been adjourned toward the end of January. In February the union was reported to have tightened up the picketing as the busy season approached. Charges against certain employers involved in the strike which had been laid in December under the Minimum Wage Act were dealt with in the provincial police court in February and the cases were adjourned until March.

SHOE FACTORY WORKERS, TORONTO, ONT.—The establishment involved in this dispute was moved to Montreal early in February, but the union reported that the assistance of unions in Montreal was being arranged for. The dispute is, therefore, transferred to the list of those where employment conditions are no longer affected but which have not been declared terminated by the union.

DRESS FACTORY WORKERS, MONTREAL, P.Q.—As stated in the February issue of the LABOUR GAZETTE, this dispute was terminated on February 4, the discharged employees being reinstated and work resumed. The employer stated that the dispute was due to a misunderstanding as to union recognition.

COTTON FACTORY WORKERS, WELLAND, ONT.—As a result of further conciliation by officials of the Ontario Department of Labour, a settlement of the dispute was reached on February 9. The employer agreed to review the wage rates of time workers, making such increases as were warranted within six weeks, to take up grievances with a shop committee chosen by the employees, to make certain improvements in working conditions and to reinstate all strikers without discrimination. Arrangements for advance payment of wages and for postponement of rent payments were also included. Operations were resumed on February 12. Complaints as to discrimination against certain strikers were made later but investigation by provincial officers revealed that such employees were not required until operations had been fully resumed, including the night shift.

FOUNDRY WORKERS, BRANTFORD, ONT.—This strike to secure recognition of the International Moulders' Union of North America was terminated on February 6 and work was resumed on February 8 as a result of negotiations between the employer and a union committee. Certain adjustments in wages were made, hours not to exceed nine per day for five days per week, complaints to be considered with a committee, any employee to be allowed to join the union but the closed union shop was refused.

LONGSHOREMEN (COASTWISE WORK), VANCOUVER, B.C.—Following the settlement of the strike of longshoremen and other water transport workers in the United States early in February, longshoremen and ship crews at some ports in the United States refused to handle cargo from Canada not loaded by members of the International Longshoremen's Association, and in some cases the crews of United States ships in Canadian ports refused to work the ships if they were not unloaded and loaded by members of this union. Longshoremen in United States ports also refused to unload or load certain Canadian ships because the members of the crews had replaced members of the Inland Boatmen's Union of the Pacific. Following the strikes of longshoremen and other water transportation workers in Vancouver and neighbouring ports from June to December, 1935, the members of the Coastwise Longshoremen and Freight Handlers' Association at Vancouver had secured a charter as a local of the International Longshoremen's Association and longshoremen at New Westminster and Victoria who continued to belong to the unions involved in the strike also secured similar charters. As the shipping companies in these ports refused to recognize these locals, having made agreements with new unions, the mem-

bers of the international union were able to secure work only for coastal ships until the summer and autumn of 1936 when some of the coastal shipping companies also refused to employ them except through the hiring hall of the Shipping Federation. The Seafarers' Industrial Union's locals at Vancouver and Victoria had become locals of the Inland Boatmen's Union of the Pacific and some coastal shipping companies refused to recognize the union. The international water transportation unions having declared strikes on the western coast of the United States about the beginning of November, the Vancouver local of the International Longshoremen's Association declared a strike on November 23, demanding recognition of the union. As a result of the refusal of United States longshoremen and ship crews to handle certain Canadian cargoes, arrangements were made for negotiations with a view to a settlement, but at the end of the month the dispute was unterminated.

Coal Miners, Coalburn, N.S.—Employees in one colliery ceased work on February 13, their demand for increases in wages having been refused. As a result of negotiations a settlement was reached providing for an increase in piece rates and day rates, the rate for loaders being raised from $3.40 per day to $3.50. Work was resumed on February 19.

Meat Packers, Calgary, Alta.—A number of employees in one establishment ceased work on February 4, in protest against the dismissal of five workers. In November, 1936, certain employees, members of the Calgary Meat Packing and Purveying Union, Local 2 of the Canadian Victualers' and Caterers' Union, requested a wage increase of 15 per cent, recognition of the union and seniority rights for workers. The employer offered a wage increase of ten per cent but refused to recognize the union as other meat packing companies did not. The employees stated that wages were lower

STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1937*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in progress prior to February, 1937			
Mining—			
Coal miners, Round Hill, Alta.	45	135	Commenced Jan. 28, 1937; for increased wages; terminated Feb. 3, 1937; compromise.
Manufacturing—			
Animal Foods—			
Meat packing workers, Vancouver, B.C.	202	4,000	Commenced Dec. 29, 1936; against discharge of employees, claimed to be for union activity; unterminated.
Fur, Leather, etc.—			
Fur factory workers, Winnipeg, Man.	100	2,000	Commenced Aug. 11, 1936; for union agreement, increased wages and 40-hour week; unterminated.
Boots and Shoes—			
Shoe factory workers, Toronto, Ont.	61	500	Commenced Jan. 14, 1937; *re* employment on new machines; employment conditions no longer affected by end of February, 1937; in favour of employer.
Textiles, Clothing, etc.—			
Women's clothing factory workers (dress-makers), Montreal, P.Q.	38	133	Commenced Jan. 29, 1937; against dismissal of workers, alleged to be for union activity; terminated February 4, 1937; in favour of workers.
Cotton factory workers, Welland, Ont.	865	8,500	Commenced Dec. 22, 1936; for increased wages; terminated Feb. 11, 1937; compromise.
Metal Products—			
Foundry workers, Brantford, Ont.	100	600	Alleged lockout; commenced Jan. 30, 1937; *re* recognition of union and closed shop; terminated Feb. 6, 1937; compromise.
Transportation—			
Water—			
Longshoremen (coastwise work), Vancouver, B.C.	200	1,000	Commenced Nov. 23, 1936; for recognition of union; unterminated.

STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1937*—*Con.*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
(b) Strikes and Lockouts commencing during February, 1937			
MINING, ETC.—			
Coal miners, Coalburn, N.S.....	150	750	Commenced Feb. 13, 1937; for increased wages; terminated Feb. 18, 1937; in favour of workers.
MANUFACTURING—			
Animal Foods—			
Meat packing workers, Calgary, Alta.....	78	936	Commenced Feb. 4, 1937; against dismissal of employees alleged to be for union activity, for recognition of union and increased wages; terminated Feb. 15, 1937; indefinite.
Textiles, clothing, etc.—			
Cotton factory workers, St. Gregoire de Montmorency, P.Q.....	16	16	Commenced Feb. 3, 1937; for increased wages; terminated Feb. 3, 1937; in favour of employer.
Knitting factory workers, Sherbrooke, P.Q.....	212	106	Commenced Feb. 26, 1937; against dismissal of worker and for increased wages and shop committee; terminated Feb. 26, 1937; in favour of workers.
Pulp and Paper—			
Paper mill workers, Iroquois Falls, Ont.....	43	215	Commenced Feb. 15, 1937; against employment of non-union inspector; terminated Feb. 19, 1937; in favour of employer.
Metal Products—			
Automobile factory workers (body workers), Oshawa, Ont.....	240	240	Commenced Feb. 19, 1937; against increase in output; terminated Feb. 19, 1937; in favour of employer.
CONSTRUCTION—			
Buildings and Structures—			
Building wreckers, Chatham, Ont.....	18	90	Commenced Feb. 11, 1937; for increased wages; terminated Feb. 16, 1937; in favour of employer.
Bridge and Highway—			
Truck drivers, etc., River Ryan, N.S.....	14	14	Commenced Feb. 9, 1937; for increase in piece rates; terminated Feb. 9, 1937; compromise.
SERVICE—			
Business and Personal—			
Waitresses, Vancouver, B.C...	6	15	Commenced Feb. 12, 1937; for increased wages and improved conditions; terminated Feb. 15, 1937; in favour of workers.
Restaurant employees, Toronto, Ont.....	5	30	Alleged lockout; commenced Feb. 1, 1937; *re* violation of agreement; employment conditions no longer affected by end of February; in favour of employer.
Maids (hospital), Moose Jaw, Sask.....	11	66	Commenced Feb. 19, 1937; for improvement in living conditions; terminated Feb. 25, 1937; compromise.

*In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

than in the other plants and applied for a Board of Conciliation under the Alberta Labour Disputes Act, 1926. It is stated that the employer refused to nominate a representative and the establishment of a Board was delayed. On February 1 the five men who had signed the application for a Board were dismissed and the cessation of work followed. A number of those on strike remained in the plant. On February 8 the employer laid information against certain of the strikers charging them with "watching and besetting," "in-

timidation" and the "forcible detention of property." Summonses were issued for forty-eight of the strikers but only eight appeared in court. Warrants for the arrest of the other forty were issued and they were arrested in the plant and released on their own recognizance to appear in court next day. On February 8 the appointment of a Board of Conciliation under the Alberta Labour Disputes Act was announced but it was reported that the strikers had withdrawn their application and cancelled the nomination of a representative. On February 15 the strike was called off pending the inquiry by a Board. Neither of the parties agreed in advance to accept the recommendations of the Board. The investigation was begun on February 19 and was completed on March 4. The Board recommended an increase in wages of three cents per hour effective from March 1, certain improvements in working conditions, further increases in wages later, recognition of the right of association and reinstatement, with some compensation, of the dismissed employees.

Cotton Factory Workers, St. Gregoire de Montmorency, P.Q.—A number of the employees in the yarn polishing department in one establishment ceased work on February 3, claiming that wage increases agreed upon in the settlement of a previous strike had not been made. Most of the strikers resumed work next day and the others were replaced.

Knitting Factory Workers, Sherbrooke, P.Q.—Employees in one establishment ceased work on February 26 following the alleged notice of dismissal of one worker, stated to have been the representative of the workers in asking for an increase in wages. They also demanded recognition of a grievance committee. As a result of negotiations their demands were conceded, consideration of a wage increase was agreed to and work was resumed on the following day.

Paper Mill Workers, Iroquois Falls, Ont.—A number of employees in the finishing department in one establishment ceased work on February 15 in protest against the appointment of an inspector or tester who was not a member of the union. The strikers had not asked the union to take up the matter with the management as provided in the agreement and the union had not authorized the strike. The mill was closed, indirectly involving 625 other workers. The international president of the International Brotherhood of Pulp, Sulphite and Paper Mill Workers arranged that work should be resumed pending negotiations and the plant resumed operations on the night shift of February 19. It is reported that certain other grievances of the men on strike were dealt with. As a result of the negotiations it was recognized that the promotion of employees and hiring of men did not come under the jurisdiction of the union.

Automobile Factory Workers (Body Finishers), Oshawa, Ont.—A number of employees in the body department in one establishment ceased work on February 19, against an increase in output required with an increase in the basic rate of pay which they alleged would reduce earnings as the output required was not possible. As a result of negotiations with the management, participated in by officials of the Ontario Department of Labour and the Mayor of Oshawa, it was agreed that the new system would be tried out until the end of the month, and work was resumed on February 20.

Building Wreckers, Chatham, Ont.—Employees on one job ceased work on February 11, demanding increases in wages to a minimum of 40 cents per hour instead of 15 cents to 30 cents and recognition of a committee. The Mayor and members of the city council met the parties and the strikers offered to accept 37½ cents per hour. The employer did not agree to this and partly replaced the strikers. One picket was arrested on a charge of intimidation as stones were thrown but no one was reported to be injured. The strikers not replaced were reported to have resumed work by February 17, under the conditions in force before the strike.

Truck Drivers, Etc., River Ryan, N.S.—Truckmen engaged at 30 cents per load on a bridge construction job ceased work on February 9 demanding a higher rate, stating that in one day's work they averaged only $1.17 per hour which was 35 cents below the government rate. The provincial highway engineer arranged that they would not be paid less than the government rate and work was resumed on the next day.

Waitresses, Vancouver, B.C.—Employees in one restaurant ceased work on February 12, demanding union wages, $14.00 per week at counters and $12.00 at tables plus board. As a result of negotiations with the union representative this was agreed to, it being stipulated that if business did not warrant this there would be further negotiations, and work was resumed on February 16.

Restaurant Employees, Toronto, Ont.—Employees in one restaurant ceased work on February 1 when one worker was laid off, allegedly in violation of the union agreement. The employer reported that the union workers were unsatisfactory and the workers claim that the employer wished to cancel the agree-

ment. It appears that the employees were replaced in a short time and the establishment was picketed throughout the month. The dispute is, therefore, included in the list of those in which employment conditions are no longer affected but have not been declared terminated by the union.

MAIDS (HOSPITAL), MOOSE JAW, SASK.—Kitchen maids and waitresses in a hospital ceased work on February 19 demanding improvements in quarters and living conditions. The hospital board undertook to investigate the conditions and work was resumed on February 26.

RECENT STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month. The annual review containing a table summarizing the principal statistics as to strikes and lockouts in other countries is on pages 290-6 of this issue.

Great Britain

The number of disputes beginning in January was 70 and 13 were still in progress from the previous month, making a total of 83 disputes in progress during the month, involving 29,900 workers, with a time loss of 306,000 working days for the month.

Of the 70 disputes beginning in January, 19 were over demands for increases in wages, 3 over proposed wage reductions, 18 over other wage questions, 4 over questions as to working hours, 15 over questions respecting the employment of particular classes or persons, 5 over other questions as to working arrangements, 5 over questions of trade union principle; one dispute was due to sympathetic action. Settlements were reached in 63 disputes, of which 6 were settled in favour of workers, 33 in favour of employers and 24 ended in a compromise; in 8 other disputes, work was resumed pending negotiations.

A strike involving 2,800 coal miners near Doncaster was in progress from November 9, 1936, to January 27, 1937, and about 6,000 other coal miners were out in sympathy with them from December 28 to January 27. The settlement reached provided for a small wage increase and for a joint investigation into conditions.

United States

The number of disputes beginning in November was 145, and 114 were still in progress from the previous month, making a total of 259 disputes in progress during the month, involving 156,000 workers, with a time loss of 2,000,000, working days for the month.

LABOUR REQUESTS OF CANADIAN LABOUR BODIES

DURING the past month three Canadian labour organizations presented legislative submissions to provincial governments. On February 3, a delegation from the Confederation of Catholic Workers appeared before members of the provincial government with a proposed program of legislation; on February 17 the Quebec Executive of the Trades and Labour Congress presented its legislative requests; and on February 22, the Halifax District Trades and Labour Council were received on a similar mission by the members of the Nova Scotia government. Summaries of these presentations are given below:

Legislative Proposals of the Confederation of Catholic Workers

On February 3, 1937, the Confederation of Catholic Workers of Canada submitted their legislative requests to the Quebec Government.

In the opening paragraphs of their submission, the delegation pointed out that the memorandum did not contain any reference to proposed amendments to the Collective Labour Agreements Extension Act as such recommendations had already been made in a separate memorandum submitted to a Committee studying possible revisions of the law.

The memorandum dealt with a large number of topics, a summary of which follows:

Male Minimum Wage Act

Stating that the Collective Labour Agreements Extension Act had helped to raise the standard of wages and working conditions in a large number of trades and industries, the memorandum pointed out that it had proven to be inapplicable in certain trades and industries where, unfortunately, workers were still receiving very low wages. The Confederation suggested that the government draft a Male Minimum Wage Act and since such an Act would presumably be enforced by a Board, it was further recommended that members of such a Board be chosen from interested parties. It was also recommended that minimum rates be fixed in accordance with the cost of living and based on a maximum eight hour day.

Subsidies to Basic Industries

The memorandum suggested that the Government might assist industrial recovery and unemployed workers by subsidizing basic in-

dustries and reducing their taxes, a practice, it was stated, which had been adopted in various European countries and the United States.

Public Works

The Confederation suggested a program of practical public works providing for wages similar to those paid under obligatory collective labour agreements, as a means of relieving unemployment.

Provincial Economic Council

The memorandum proposed that a Provincial Economic Council be established composed of technicians, economists and sociologists. This organization, it was suggested, could render great service to the Government in an advisory capacity.

Labour Court

In view of the development of labour legislation necessitating many recourses to courts to obtain interpretation of such legislation, and in order to secure more uniform legal interpretation and avoid annoying delays in the courts, the Confederation suggested that a labour court be established in the province.

Workmen's Compensation Act

In regard to this Act, the Confederation in its memorandum made the following recommendations:

1. That the industries exempted by Order in Council on account of the number of workers hired by an employer be brought back under the Act;
2. That this Act become so it will insure all workers by bringing within its scope the industries not yet covered, as well as individuals;
3. That the base on which compensation is reckoned be changed by adopting as a new one a fair and reasonable wage for a day's work multiplied by 300;
4. That compensation be provided for workers on unemployment relief works;
5. That the worker be given the right of appeal against the decisions of the Workmen's Compensation Board;
6. That the confidential report from an employer should become an official report;
7. That a representative of the workers be appointed as a member of the Workmen's Compensation Board;
8. That the Act be referred to a committee of employers, employees and legal advisers who could report to the government on desirable amendments.

Communism

The Confederation registered its approval of the campaign launched by the Prime Minister of Quebec against communism, and suggested that a vote of $10,000 be made to the Confederation of Catholic Workers for the purpose of assisting them to carry on their program against Communism.

Working Conditions of Newspapermen

Attention was drawn to the working conditions of newspapermen in the Province of Quebec. It was pointed out that the working week of a newspaperman varies from sixty to seventy hours in normal times and may reach one hundred hours during an election period, and that wages of ten, fifteen and twenty dollars a week are common. The Confederation recommended that a Commission be appointed to enquire into the living and working conditions of newspapermen in the Province of Quebec and it was also suggested that a member of the National Catholic Union of Newspapermen of Quebec be appointed to this body.

Arbitrary Dismissals

The Confederation requested legislative action to protect the workers' right of association and to insure the better enforcement of social laws. With this object in view, it was suggested that legislation be enacted to provide an indemnity to a workman who is arbitrarily dismissed and that the burden of proof for such arbitrary dismissal should rest with the employer.

Mothers' Allowances

The Confederation requested the Government to provide special allowances for indigent mothers.

Old Age Pensions

It was suggested that the Provincial Government come to an arrangement with the Dominion Government whereby the age for pension eligibility be reduced from 70 to 60 years.

Slum Clearance and Housing

In this regard it was requested that the Provincial Government permit the City of Montreal to borrow money required for the purpose of slum clearance and the construction of more habitable dwellings.

Companies Act

The Confederation suggested that the Provincial Companies Act be amended so that the directors of joint stock companies carry a greater measure of responsibility under the Criminal and Civil Code; and that overcapitalization, which is commonly referred to as stock watering, be forbidden by law. In addition, it could be provided that joint stock companies possessing provincial charters publish in the Official Gazette the list of their Boards of Directors, the salaries, emoluments or fees of the latter, the number of shares issued by each company and the number of

shares held by each member of the Board of Directors.

Holidays with Pay

It was submitted, that the Government should make obligatory, holidays with pay for all wage earners with at least one year's service.

Compulsory Arbitration

The adoption of a Compulsory Arbitration Act was requested by the Confederation, to settle labour disputes in the case of workers, such as firemen, who are forbidden by law to go out on strike.

Double Shift

It was recommended that the double platoon system, with a change every twenty-four hours, be made compulsory in the fire departments of all cities of 100,000 population or over.

Pulp and Paper Industry

Alleging that the pulp and paper industry was one in which Sunday was least observed, the Confederation requested that a 132 hour week be made compulsory, with a cessation of work at noon Saturday, thus permitting all repairs being done before midnight and making it unnecessary to resume work before midnight on Sunday.

Other Recommendations

Among other recommendations contained in the Confederation's memorandum were the following: Derogations from the limitation of hours of work; compulsory licensing of trades; increase in allowances under the Public Assistance Act in order that hospital workers be better paid; compulsory licensing of pipefitters in municipalities of 5,000 or over; annulment of "closed towns" charters; establishment of fair wages for rural school teachers; revision of the Industrial Establishments Act to provide payment for overtime at time and a half; compulsory establishment of employees' pension funds by public utilities; the inclusion of silicosis as an industrial disease; compulsory automobile insurance against property damage and public liability; the use of concrete bridges wherever possible instead of iron or steel; and the carrying on of lumbering operations in the winter instead of in the summer.

Legislative Requests of Quebec Provincial Executive of Trades and Labour Congress

The Quebec Provincial Executive of the Trades and Labour Congress submitted its program of proposed legislation to the Legislature at Quebec on February 17. In the delegation, headed by Mr. P. M. Draper, President of the Trades and Labour Congress; Mr. Raoul Trepanier, chairman of the provincial executive, were representatives from the various industrial centres of the province.

Unemployment and Relief

In presenting its recommendations on unemployment and relief, the provincial executive advocated as a first consideration the provision of opportunities for employment, "and that if private enterprise fails in this respect, then governments should make every effort to provide employment by undertaking all possible public works." It was maintained that direct relief should only be a last resort and when granted "should be adequate to meet the requirements of the recipients for more than merely food, clothing, and shelter," and it was added, "unemployed women should be given the same consideration as is accorded to men."

The memorandum emphasized the unemployment plight of skilled building tradesmen and recommended the construction of "much needed public buildings."

Slum Clearance.—On the matter of slum elimination, the memorandum observed:

"We desire also to call your attention to the fact that nothing has ben done so far to eliminate ramshackle and unsanitary houses and tenements so numerous in the Metropolis of Canada; slums are centres of degeneration of the race, both on physical and moral grounds; such undertakings would not only relieve distress amongst workers in the building and allied industries but would reduce the always increasing cost of direct relief and be in the best interests of the Province as a whole.

"We further suggest that a special fund be created to help municipalities to do away with slums and that a minimum standard of building regulations be enacted by provincial legislation, to be adhered to by all municipalities in future and should be a primary condition to obtention of any grant."

Hours of Work

Pointing to the "continuous progress in mechanization" as "intensifying the problem of employment," the executive stressed the necessity of a reduction in working hours, and that as a first step "the government institute the six-hour day and five-day week on all public works, at the same time maintaining wage standards so as to provide an increased volume of purchasing power." It was advocated that the same conditions be applied to works where financed, or a guarantee is extended, by the government.

Pending the establishment of such conditions, amendments in regard to hours were sought to the Act respecting Limitation of Working Hours, the Weekly Day of Rest Act, and the Industrial and Commercial Establishments Act.

Referring to the first of these enactments, the memorandum considered that better control over the supervision of the Act would be ensured by the insertion of a clause providing that it be not lawful "to work more than forty hours per week or more than eight hours per day on the first five days of the week from 8.00 a.m. to 12.00 noon and 1.00 p.m. to 5.00 p.m." An amendment was also sought to the section permitting derogation from the established hours in urgent cases by replacing the words "complementary or urgent" with "except to save life and property."

The Weekly Day of Rest Act should also be revised, in the opinion of the executive, by the inclusion of "all those employed in amusement places, business or industry operating without interruption."

As regards the Commercial and Industrial Establishments Act the executive considered that it "is not in line with the present situation and should be not only revised but entirely re-drafted."

Minimum Wage Act

The memorandum expressed the opinion that the Minimum Wage Act did not fully protect women, or young boys and men. In theory it was designed to give minimum wage protection, "but in practice it is altogether different." Accordingly, the following clause was proposed as an amendment.

"That no young boy or man employed in any industrial or commercial establishment or any other enterprise governed by a Minimum Wage Order shall be paid a lesser wage than the one set for women labour by said Minimum Wage Order; moreover, that all rules and regulations set forth by such Minimum Wage Order apply to the entire staff, both male and female."

It was also requested that the jurisdiction of the Commission be extended to include office employees, domestic service and the lay teaching profession.

Collective Labour Agreements

Commending the action of the government in appointing a commission to investigate the operation of the Collective Labour Agreements Extension Act, the memorandum reiterated a former request, viz.: "to inaugurate in the Province a system of judiciary to deal exclusively with all cases of breach of collective labour agreements and other labour differences or misinterpretations between employers and employees."

Right of Organization

"The continued tendency of arbitrary employers to prevent their workers organizing for their mutual protection in trade unions" prompted a reiterated request that legislation be enacted "which will fully protect workers in all industries in their exercise of their right to organize as they see fit; bargain collectively, secure signed agreements and be represented by representatives of their own choosing, with government assistance, when necessary to effect satisfactory adjustment of all disputes."

Workmen's Compensation

The delegation considered that the method used by the Quebec Compensation Board in computing the average earnings of injured workers for compensation purposes was "inadequate and unfair." It therefore asked that the Act be amended so as to establish the yearly salary of the worker as the basis for determining the compensation by multiplying by 300 the daily salary earned at the time of the accident as recommended by the Board of Inquiry on Workmen's Compensation in 1925. It was also urged that consideration be given to the possibilities of future earnings in case of accidents to young workers, and that the compensation be increased from 66⅔ to 75 per cent.

Other requests in respect to compensation were: that all workers be included under the Act; that silica poisoning be added to the list of industrial diseases as well as frost-bite and poison ivy (when contracted by railway maintenance-of-way employees and others subjected to this hazard); and that a labour representative tbe appointed to the compensation board.

Health and Safety

Under the heading of "Health and Safety Measures," the memorandum contained a number of recommendations concerning motor transport, the one-man car, regulation of the use of poisonous materials, motion picture operators, elevators and hoist machinery.

Social Legislation

In the sphere of social legislation it was requested that the age limit for obtaining old age pensions be reduced from 70 to 65 years, and that a system of mothers' allowances, as well as sickness and disability insurance be instituted.

Provincial Legislative Proposals of Halifax District Trades and Labour Council

Proposals for provincial labour legislation were presented to the Nova Scotia Government on February 22 by the Halifax District Trades and Labour Council. A press summary of the legislation requested indicated the following recommendations:—

Enactment of a provincial fair wage act which would be similar in scope to the Dominion Fair Wage Act.

Extension of the Industrial Standards Act to cover the province, to include electrical communication workers, and to eliminate the present $100 exemption clause. Appointment of a full time inspector under the act.

Amendment of the Minimum Wage Act to apply to male workers when doing similar work to that covered by the schedules for female workers under the Act.

Labour representation on all boards and commissions dealing with questions affecting the workers.

Eyesight, mental and physical examination board under the Motor Vehicle Act.

Amendment to Mothers Allowance Act, giving mothers of one child benefits of the Act.

Extension of Nova Scotia Labor Act covering non Nova Scotia labour, which expires May 1.

Continuation of Government policy of giving preference to union labour in hiring workers.

Complete revision of the Theatres Act and bringing it up to date, as a measure of public and industrial safety.

Taking steps to replace the Victoria General Hospital main building with a modern hospital building.

Creation of a steamfitters examination board.

Implementation of the Limitations of Hours Act.

Continuation of a program of public works as unemployment relief measure.

Establishment of a domestic relations court.

Enactment of an apprenticeship act.

Extension of district for certified electrical wiring inspectors to points outside of Halifax.

Prohibition of the sale of electrical supplies and appliances not bearing an authoritative stamp of approval.

Appointment of stationary steam boiler, compressed air tank and receivers, inspectors.

The Government was commended for establishment of the Industrial Standards Act.

Opposition to any amendments to the Workmen's Compensation Act so as to give the right of appeal on question of fact; or so as to base compensation on the workers full yearly earnings.

Trade School Regulations in British Columbia

Under the provisions of the Trade Schools Regulation Act, the following general regulations governing trade schools are published in the *British Columbia Gazette* of March 4, 1937.

1. *Application.*—These regulations shall apply only to every trade school in respect of which no special regulations apply.

2. *Advertising.*—The use of any advertising which may tend to mislead is prohibited, and the keeper or operator of any trade-school may be required by the Minister of Labour to discontinue any specified advertisement or means of advertisement.

3. *Health, Sanitary, and Safety Regulations.*—Every keeper or operator of a trade-school shall be responsible for the proper carrying-out of all health, sanitary, and safety regulations upon and within the school premises.

4. *Services.*—A trade-school shall not be operated jointly with a shop or other commercial business.

5. *Posting Regulations.*—A copy of these regulations must be posted in plain view within the school premises.

6. *Fees.*—The annual fees for registration under this Act shall be as follows: In case one trade or occupation is to be taught, $5. If more than one trade or occupation is to be taught, $5 in respect of one such trade and $2 in respect of each additional trade or occupation, with a maximum total fee of $25.

Coal Subventions

No change is contemplated "in the principle upon which coal subventions are based" according to a statement made by the Hon. T. A. Crerar in the House of Commons on March 1. As indicated by the Minister, the purpose of these subventions, initiated early in the depression, are to place the Canadian producer in as good a position as the American producer in certain areas and markets of the Dominion. In 1936 the Minister stated that the subventions paid (partly to the railways for the movement of coal) were as follows: on Nova Scotia coal, $1,573,000; New Brunswick, $15,000; Alberta, $307,000 (Alberta-Ontario movement, $163,000); Saskatchewan, $38,000; and British Columbia, $113,000. The total amount sought in the estimates to provide for the payment of the movement of coal was $2,250,000.

CANADIAN FEDERATION OF LABOUR

Convention of Revived Organization

The convention of the Canadian Federation of Labour was held in Toronto, February 25-27, 1937. This organization was originally formed in 1902 and functioned as a national labour body until 1927 when it merged with the All-Canadian Congress of Labour. It was revived in October, 1936, as a result of differences within the All-Canadian Congress—Labour Gazette, November, 1936, page 977). The president, Mr. Z. David, expressed his pleasure at seeing so many delegates present from the various local unions throughout the country. He informed the delegates that Hon. Norman McL. Rogers, Federal Minister of Labour, was unable to attend through pressure of parliamentary activities, and that, owing to the unavoidable absence, through illness, of the Deputy Minister of Labour, Mr. Wm. Dickson, Mr. E. N. Compton, one of the senior officials of the Department of Labour, was present for the session.

Addressing the delegates, Mr. Compton expressed his pleasure for the privilege of attending the convention and regretted that the Minister and Deputy Minister of the Department were unable to attend. He intimated that the facilities of the Department were not utilized by Labour to the fullest extent, and declared it would be much easier to affect settlements if officers of the Department were called in at the first sign of labour trouble. "The services of the officers of the Department are at your disposal," stated Mr. Compton, and he hoped that they would be utilized. In thanking Mr. Compton, President David referred to the fair dealings of the Department in the past and was sure it would continue.

The credential committee reported that the following organizations were represented at the convention: Canadian Association of Railwaymen; Canadian Electrical Trades Unions; Electrical Communication Workers; Canadian Federation of Musicians; One Big Union; Amalgamated Building Workers; National Union of Theatrical Employees; National Seamen's Union; Canadian Printers' Union, as well as representatives of various local unions.

In the opinion of President David, the calling together, at this time, of representatives of the various organizations affiliated with the Canadian Federation of Labour would have a stimulating and strengthening effect. He expressed appreciation for the response to the call and for the ready co-operation received from the local unions. Although the tasks devolving upon the Federation were unprecedented, he considered it was evident that the membership was prepared to support its program. He stated that the formation of the Canadian Federation of Labour thirty-five years ago was the result of the Canadian workers desiring an organization of their own but the aspiration of these workers was nullified to a considerable extent by outside unions. The president of the Canadian Federation of Labour opened up a new channel between the workers and the Government, and its objective, he observed, was the complete independence of the Canadian workers.

Report of Executive

In the report of the provisional executive board reference was made to the scope of the work now being carried on by the Canadian Federation of Labour. The view of the Federation was that a political labour party should reflect the policies of the industrial labour movement; its status should be that of a complementary organization with respect to the national industrial unions. It was further contended that where unions expelled their members for non-payment of dues, they were readily recruited by the communist organizations. The officers were emphatic in their declaration that the Canadian Federation of Labour was opposed to Communism and Fascism.

The attention of the delegates was drawn to the work of the National Labour Conference, by which the national unions and the unions of the Confederation of Catholic Workers of Canada were brought together for the purpose of joint legislative action. It was emphasized that the Federation, aided by councils, would do everything possible to facilitate the growth of the movement but called upon the affiliated bodies and directly chartered unions to exert efforts to bring in new members. The executive board thanked those who were taking the lead in the various organizations.

The delegates were further advised that in presentations of legislative programs or meeting the Government on other matters, the representatives of the Canadian unions have received an attentive hearing.

The report also referred to the right of employees to organize in unions of their own choice and recommended legislation to this effect.

An amendment to the Criminal Code was requested so as to prevent watching and be-

setting of establishments where bona-fide trade unionists were employed.

As an aid to unemployment, it was suggested that extensive public work programs be undertaken by the federal, provincial and municipal governments. Opposition was registered to any letting down of the barriers to immigration until the unemployed had been absorbed.

The work of the League of Nations was commended.

Constitution Approved

A new constitution for the Canadian Federation of Labour was drawn up and approved by the delegates. Among other things, the constitution provided for provisional national unions (those not sufficiently organized to maintain a central executive), and for legislative committees in the various provinces.

Adopted Resolutions

The recommendations in the resolutions adopted were:—

Establishing of a minimum wage for musicians and that this class of worker be brought under the scope of the Workmen's Compensation Act.

Extension of the federal public works program with fifty per cent of the expenditure in wages.

Asking the Government to place contracts with contractors and firms which do not discriminate against Canadian unions.

Appointing of a Fair Wage Officer for the Prairie Provinces.

Petitioning the Federal Government to enact legislation guaranteeing to the workers the right to belong to the organizations of their choice and making interference by the employers with the exercise of that right a criminal offence.

Requesting legislation granting workers holidays with pay.

Demanding an adequate defensive program for land, sea and air.

Protesting the granting of injunction proceedings in union affairs where employers are not involved.

Instructing the executive board to take up with the Canadian Broadcasting Corporation alleged discrimination against musicians, members of Canadian unions.

Employment of two projectionists in all theatres while show is in progress.

Enactment of legislation providing for one day's rest (the interval between the cessation of work on a normal working day and the commencement of work at the normal hour on the next day but one) in seven, in Provinces where such an Act is not in force.

Prohibiting the picketing of an establishment where members of Canadian unions are employed.

A number of other resolutions dealt with matters arising out of the dispute of September 25, 1936. (LABOUR GAZETTE, October, 1936.)

Officers elected were: President, Zenon David, 365 Cartier Park, Montreal, Que.; vice-presidents, J. McKinlay, Vancouver, B.C. and A. E. Bray, Montreal, Que.; secretary-treasurer, W. T. Burford, 126A Sparks St., Ottawa, Ont.

Other members of the executive board were: Allan Meikle, Winnipeg, Man., G. W. McCollum, Toronto, Ont., and Charles Reid, Toronto, Ont.

CONVENTION OF ALBERTA FEDERATION OF LABOUR

With the largest and most representative attendance in recent years, the twenty-first annual convention of the Alberta Federation of Labour was held on January 25, 26 and 27. According to the official report of the proceedings, recently received, there were present twenty-three delegates representing trade unions in all sections of the province.

Featuring the 1937 convention was the attendance of delegates from the former Mine Workers Union of Canada, which early in 1936 merged with the United Mine Workers of America. This movement resulting in the amalgamation of all mine workers into one organization, substantially increased the membership of the Alberta Federation of Labour.

Approximately 150 resolutions were considered by the convention during its three day sessions. Of this total, nearly forty dealt with workmen's compensation, and were referred to a committee on that subject. Among the major recommendations in the resolutions on workmen's compensation were:

Definite advancement in the rates of compensation paid to workmen and their dependents;

Appointment of a labour representative on the Board, "chosen by the trade union movement of Alberta";

Protesting the levy of seven cents per man per day as premium for the medical fund;

Abolition of the three-day waiting period;

Compensation to be based on the earnings of actual days worked during the year with a minimum rate of $20 per week plus an additional two dollars per week for each child;

Institutional treatment for injured workmen during re-habilitation;

Payment of full compensation until injured workmen are fit to resume their former occupation;

Reference of disputed cases to a Board of Review;

Appointment of a practical miner to examine all mines and authorize improvements in the interests of accident prevention;

Compulsory provision of first class ambulances by employers in cases of industrial accidents, etc.

Unemployment and Relief.—The convention adopted several resolutions opposing the Farm Employment and Improvement Plan as a method of meeting the problem of the single unemployed. Two other resolutions protested "the subsidizing of private enterprise in the name of unemployment relief policies," and "the continued lack of a humane policy in dealing with the unemployment question and particularly the problem of the single person by all governments." Other resolutions called for: the abolition of the relief system and its substitution by a system of work for wages; the institution of low cost housing; pressure by the Trades and Labour Congress for unemployment insurance legislation to cover all classes of workers; and the establishment by the provincial government of "a large scale road and hard surfacing program protected by a union wage clause."

Industrial Organization.—Five resolutions were submitted on the subject of industrial organization. In substitution of these, the committee on Resolutions made the following recommendation, which was adopted:

"Resolved, that we reiterate the previous action of this Federation by endorsing the Industrial form of organization and request the executive of the Trades and Labour Congress of Canada to keep in close touch with the two factions in the United States of America, represented by the American Federation Executive and the Executive Committee of the C.I.O., with a view of using their good offices at the earliest opportunity to assist in bringing about reconciliation between these two mighty forces of our movement, and further, that a copy of this resolution be forwarded to the Executive of the Congress."

Mines and Mining.—Several amendments to the Mines Act were sought in one resolution which recommended: (1) making it compulsory for all coal companies to determine by weight instead of measurement (if the miners so desire) the amount of coal extracted by the individual miner; (2) inclusion of all examiners or fire bosses under the jurisdiction of the provincial government; (3) first class ambulances at all mines; (4) cost of all first aid training to be borne by the government; (5) mine rescue cars to be stationed in each mining district with auxiliary station and equipment at each mine.

In addition, other proposed amendments requested were: certificates of competency for power hoistmen, abolition of wooden turntables and tracks and their replacement by metal switches and steel track.

The convention adopted a request for wage payments in the mining industry every two weeks with a maximum of a three day "hold-over" of earnings.

Amendments were also sought to the Coal Mines Wages Security Act to compel mine operators to post a bond; to bring the administration of the Act under the Mines Branch; and to authorize the Chief Inspector of Mines "to stop all operators immediately wages have not been paid."

The government was also asked to implement the recommendations of the Barlow report and put into effect a system of licensing coal mines.

Bureau of Labour.—By an adopted resolution the convention instructed the Federation Executive "to press vigorously for a thorough investigation into the dismissal without a hearing, of tried and faithful employees of the Alberta Government Civil Service, with long seniority, especially in the Bureau of Labour" and also that the Executive request the re-establishment of the Bureau of Labour with an Alberta trade unionist in charge.

British North America Act.—The convention concurred in a resolution which requested the provincial government "to urge the Dominion government to so amend the B.N.A. Act to make possible the Dominion government taking over unemployment and all social legislation that is interprovincial in its character, and further that an Economic conference be called by the Dominion government composed of all sections of society."

Other Recommendations

Among the recommendations contained in some of the adopted resolutions were:

Establishment of coal by-product plants by the provincial government;

Government monopoly of nickel processing and its exportation under bond;

Purchasing of code-protected goods in Alberta, "all things being equal."

Opposition to any letting down of immigration barriers.

Inauguration of a policy of natural gas conservation;

Public development of natural resources;

Establishment of a government monopoly in the development of radium;

Abolition of Federal Sales Tax;

Tax of 25 per cent on unearned increment, including bonds and mortgages;

Abolition of all lunch counters in drug stores;

Free text books and supplies to public and high school students;

Inclusion of deserted wives under the Mothers' Allowance Act.

Augmentation of provincial government debt reduction legislation by a 50 per cent reduction on principal due on mortgages on workers' homes, and by a reduction of all interest on public and private debt to 2½ per cent;

Conversion of the Old Age Pensions Act into a "Retiring Allowance Act" with benefits payable to all persons over the age of fifty "who actually retire from commercial and industrial activities"; and that payments "be adequate to maintain a decent standard of living having regard to the dependents of all persons on this retiring fund." . . . . ;

Establishment of new minimum wage standards, "commensurate with present day needs," for all female workers in industry and particularly in the hotel and restaurant trade.

Legislative Requests

Subsequently, on February 19, officers of the Alberta Federation of Labour submitted to the provincial government its proposed program of labour legislation. Several of the resolutions adopted by the convention—particularly those relating to a forty hour week, launching of a provincial works scheme, renovation of buildings and highways, etc.—were incorporated in the presentation.

Annual Report of the Quebec Association for the Prevention of Industrial Accidents

The annual report for 1936 of the Quebec Association for the Prevention of Industrial Accidents was presented and adopted at a meeting of that organization held in Montreal on February 19, 1937.

The report, which was prepared by Lieut.-Col. Arthur Gaboury, general manager of the association, indicated that in 1936 there were 7,952 lost time accidents compared with 6,602 in 1935. Of these accidents, 47 were fatal compared with 33 in the previous year. Efforts of the association during the past year were increased and it was pointed out that as a result of an analysis it was found that 88.18 per cent of the accidents were due to "human failure" such as handling objects, falls of persons, falling objects, walking on or striking objects, and dangerous substances, while only 11·19 per cent of accidents were attributed to machinery or tools. It was suggested in the report that, as "human failures" were responsible for the larger proportion of industrial accidents, the most effective way they can be brought under control was by "close and understanding supervision."

A feature of the report was a listing of the safety records of various firms in the Province during the year. These firms were grouped on a basis of the number of man-hours without an accident. The highest award of the Association—"The Excellence Shield"—was awarded to the following firms:

Papineau Plant of the Dominion Rubber Co. Ltd.,—1,148,400 man-hours without accident; St. Henri Works of The Steel Company of Canada—1,030,000 man-hours; The Goodyear Cotton Co. of Canada Ltd. St. Hyacinthe—1,622,525 man-hours; and the Canadian Marconi Company with 710,942 man-hours without accident.

The following firms have been awarded the Association's Certificate of Merit:

Cooperage Department of the Steel Company of Canada—14 years and 2 months without an accident; Yamaska Garments Limited, St. Hyacinthe—1,787,500 man-hours without accident; Needlecraft Mills Limited, St. Hyacinthe—1,558,700 man-hours without accident; Gillette Safety Razor Company, Montreal—550,000 man-hours without accident (2 years); Federal Clothing Mfg. Co., Sherbrooke—191,063 man-hours without accident; Eagle Pencil Company, Drummondville, 113,087 man-hours without accident; Stanley Tool Co. of Canada, Roxton Pond, 142,653 man-hours without accident; La Cie de Tricot Nicolet, Nicolet—123,713 man-hours without accident, and Acton Shoe Company, Actonvale, 270,435 man-hours without accident.

Firms awarded the Association's Certificate of Orderliness include:

R.C.A. Victor Limited; Canadian Allis-Chalmers Limited; L. Dejean & Company; La Regina Shoe Co. Ltd., Ste-Marie de Beauce.

LEGISLATION TO AMEND THE COMBINES INVESTIGATION ACT

Review of Bill introduced by Minister of Labour

The Minister of Labour introduced a Bill in the House of Commons on February 26 to amend the Combines Investigation Act, involving a number of substantial changes.

The Combines Investigation Act, providing penalties and means of investigation for such commercial combinations, trusts, mergers and monopolies as operate in restraint of trade and to the detriment of the public, was placed under the Minister of Labour on its enactment in 1923. In 1935 it was amended to provide for its administration by the members of the Tariff Board under the provisions of the Dominion Trade and Industry Commission Act, 1935, and reports under the Act were to be made to the Prime Minister.

The Government's notice of motion for the resolution preceding introduction of the Bill was given on February 11. The Bill, Number 41, as introduced and given first reading on February 26, provides for administration of the Combines Act by a separate Commissioner instead of by the members of the Tariff Board; and the Minister in charge of the Act would again be the Minister of Labour. Provision is made for the Commissioner to have charge of the investigation of alleged combines. Persons may also be temporarily appointed, if necessary at any time, as special commissioners to investigate and report regarding alleged combines, with the same powers for this purpose as those of the Commissioner of the Act. There is a clarification and extension of the definitions of mergers, trusts and monopolies, which, if operated in a manner injurious to the public, are unlawful combines under the Act. Maximum penalties which the courts may impose upon parties to unlawful combines are increased to $25,000 with or without imprisonment for a term of not more than two years, and, upon any corporation contravening the Act, a fine not exceeding $100,000, as compared to provision for a maximum fine of $25,000 upon corporations under the existing Act.

The Bill provides for the repeal of sections 13 and 14 of the Dominion Trade and Industry Commission Act, 1935, under which sections the Combines Investigation Act had been placed under the administration of the members of the Tariff Board, and provision had been made for certain exemptions from prosecution for alleged offences against the Combines Act and against certain sections of the Criminal Code. Section 14 of the Commission Act, which purported to provide these exemptions, was held by the Supreme Court of Canada to be constitutionally invalid.

Other amendments involve changes in a number of matters of a more technical nature relating to procedure in investigations and in court actions. These include changes as to the courts which may try offences under the Act, restoration of a former provision concerning the use of documents as evidence in court actions, provision for the transferring of fines to the government or governments bearing the costs of prosecution, omission of a section which had made provision against the trial of a person upon the same evidence or at the same time under both the Combines Investigation Act and section 498 of the Criminal Code; also a revision concerning the matter of returning documents to persons who have produced them in investigations under the Act, strengthening of a section relating to the liability of directors who acquiesce in offences committed by their company, and addition of a section declaring that rights of taking civil action are not intended to be affected.

On second reading of the bill on March 1 the Minister of Labour reviewed the general nature and purposes of the bill in some detail. After making mention of changes to which reference has already been made above, his remarks included the following:—

Former Combines Legislation

"The Canadian legislation in connection with combines represents an orderly and progressive development over a period of almost fifty years. In reshaping the legislation, as we are seeking to do at this time, we have sought to incorporate the best features of the several Acts which have preceded the present Act. The type of administrative agency is naturally one of the most important considerations to be kept in view.

"When we turn back to the earlier attempts to deal with combines in Canada we find that various types of administrative agencies have been employed from time to time. For example, the restraint of trade Act of 1889, which is now section 498 of the Criminal Code, made no special provision for the investigation of alleged offences. Several methods of administration were used in subsequent legislation. The Combines Investigation Act of 1910 provided for a preliminary inquiry by a supreme court judge and subsequent investigation by a board composed of three members, which board was appointed specifically for the purpose of investigating a particular complaint. In 1919, during the brief existence of the Board of Commerce

which was established to administer the Combines and Fair Prices Act, the agency employed was a board of three commissioners."

The Combines Investigation Act of 1923

"Under the Combines Investigation Act of 1923 it was planned to have all important investigations conducted by a commissioner especially appointed for the purpose, whose status and powers were much the same as those of a royal commissioner appointed under the Inquiries Act. At the same time provision was made for preliminary inquiry by the Registrar. The office of registrar was created by the legislation of 1923 and his duties were in the nature of those belonging to an executive secretary in connection with the administration of the act. The Registrar's powers in the matter of conducting inquiries were the same as those of the ad hoc commissioners and were sufficient to enable him, if called upon, to carry an investigation to its completion.

"In the years 1930 to 1935 the practice of conducting inquiries with special commissioners fell into disuse. The previous administration appointed only one commissioner; all the other investigations were conducted by the Registrar. One disadvantage of the latter method, that is, inquiry by the Registrar, was that while the Act required that the reports of commissioners should be made public, it did not contain the same requirement with respect to reports of the Registrar. Consequently, few reports were made public during the period to which I refer. This had the effect of limiting the usefulness of an Act which had been designed to attain its purpose, at least in some measure, through the full use of publicity."

Mergers and Monopolies

"In the present Bill the definition of monopoly is intended to cover all commercial monopolies. In other words, the exemptions which were added by the Senate amendments of 1935 are excluded in the definition of monopoly which is found in this Bill. It will include not only any one or more persons who 'substantially control any class or species of business', but also those who 'have such control over the supply or distribution of or the demand for products of any class or species of business as to enable such person or persons to maintain, enhance or substantially modify or control prices of such products'. What I have just stated is in the terms of the definition of monopoly which will be found within the Bill which is now before the House. The inclusion of such corporations within the definition of monopoly does not mean that they are thereby condemned under the Act. It does mean that they can be subject to investigation under the Act when circumstances warrant such investigation. Before they can be convicted of any offence against the Act it must be proved that their activities have been such as to be prejudicial to the public interest. They must be brought within the category of monopoly, and it must be proved that they have operated or are likely to operate against the interest of the community.

"The word 'trust' is used in the Act as having the same meaning as the word 'monopoly'. Mergers are separately defined to include all amalgamations of businesses, but only mergers which use their powers to injure the public will be liable to investigation or prosecution under the Act. It cannot be made too clear, Mr. Speaker, that the purpose of the present Bill is not to prevent or discourage trade combinations, or to condemn large organizations of business merely because of their size. Expansion of business has been a part of the development of recent years in this and other countries. Large scale business enterprises of themselves do not operate to the public detriment. Unquestionably some of them may operate to the public advantage through the economies which are brought about through the large scale operations they conduct. There is nothing in the Bill which condemns monopolies, trusts or mergers as such. The purpose rather is to bring this particular type of organization within the scope of the legislation in order that, if a monopoly, trust or merger should be controlling prices to the public detriment, investigations may proceed under the Act and penalties may be applied if the offence has been committed. We are anxious rather to prevent abuses of powers than to pillory or to describe as unlawful a particular form of economic organization."

Penalties

"I come now to the question of penalties; and here too, on the basis of the experience of recent years, it is proposed to introduce a change. In the first place there is no intention at all to depart from the use of publicity as a main factor in accomplishing the purposes for which the Combines Investigation Act was designed. I am not sure that publicity should be described precisely as a penalty: it is more of the nature of a remedy than a penalty. Publicity is not always enough. It has to be realized that there will always be some individuals who will not be prevented through fear of publicity from attempting to reap additional rewards in the way of price control which might come to

them through a use of their extraordinary powers. These may be individuals who are not greatly deterred by publicity because of their personal viewpoint or the nature of their business; or corporations which, owing to the anonymity which often clothes the operations of incorporated companies, or because the companies' responsibilities are shared amongst directors and officers, may be peculiarly insensitive to public opinion. For such companies and individuals penalties must be provided in the form of fines or imprisonment which will serve both as a deterrent and as a suitable punishment.

"It is felt, in view of the growth of modern business corporations, and particularly the growth of large scale operations, that if the Act is to be efficiently enforced there should be an increase in the maximum penalties which may be imposed. It is evident that a penalty of $25,000 might be insufficient in many cases to deter a large corporation from violating the Act when in a few weeks or months it might make well over this sum in additional profits by continued operation as a combine. By this Bill the maximum penalties which may be imposed by the Act are increased from $10,000 to $25,000 in the case of individuals and from $25,000 to $100,000 in the case of corporations. The maximum term of two years' imprisonment is retained, but under the Act as amended a court may impose both fine and imprisonment."

Amendment on Use of Documents

"This Bill includes an amendment to a section which was before Parliament a year ago. This section relates to the use in criminal proceedings of documents which have been previously received from witnesses during an investigation under the Combines Investigation Act.

"The amendment we sought to make last year was to correct an amendment which had been introduced by the Senate in the previous legislation of 1935. Under the Senate amendment it was made impossible, as I recall, for a document which had been produced during an investigation under the Combines Investigation Act to be used thereafter in a criminal prosecution founded upon that inquiry. Last year in the amendment introduced by the Government we sought to have that corrected, but the Senate stood upon its ground; and by what is now proposed we seek once more to have that original defect corrected. In other words we do not believe that documents which are introduced during an inquiry should, as it were, find sanctuary during the period of inquiry and not be usable thereafter in a criminal prosecution which might be founded upon it....

"The section dealing with this matter is now submitted in revised form, which makes oral evidence inadmissible in any subsequent criminal proceeding, instead of only such oral evidence as a witness may be required to give in obedience to an order. The new section does not give the present special protection to documents produced by witnesses."

Purpose of the Act

"The enactment of this measure and its enforcement will do much, we believe, to restore a healthy competitive condition and to eliminate in large measure price fixing methods which in some commercial fields have operated so decidedly against the public interest.

"It follows that the administration of this Act will not involve the sanctioning of any selected price fixing agreements either because the prices which may be fixed are likely to prove reasonable or for any similar reasons. As I mentioned a short time ago, it is not the intention of this government to set up machinery which will attempt the task of the regulation of industry or the control of prices. Price competition, it is certain, is a basic essential of a competitive system. No government can or should attempt, under the present industrial system in this part of the world, to decide what are likely to prove to be the reasonable prices for countless commodities and services. On the other hand, if artificial obstructions are removed so that competitive conditions may prevail, prices will tend much more readily to conform to their proper levels as determined by the market's appreciation of their utility...

"To conclude, Mr. Speaker, it may be said that the purpose of the present Bill is to widen the scope of the present Act; to establish a full time administrative agency, to provide for more suitable and workable provisions with respect to the use of evidence; to facilitate the greater use of publicity as a remedial measure and to provide more suitable and more effective penalties for offences. Finally I would submit that there has been no more appropriate time than the past few years, with the very striking disparity between the loss of income suffered by many and the artificially maintained prices and restrictions imposed by others, to serve as a demonstration of the need for a vigilant application of the sound principles which lie at the foundation of this legislation."

REPORT OF THE ROYAL COMMISSION ON ANTHRACITE COAL

The Report of the Royal Commission appointed under the Inquiries Act to inquire into the importation and distribution of anthracite coal in Canada was tabled in the House of Commons on February 4, 1937, by the Hon. Norman McL. Rogers, Minister of Labour.

While finding no evidence as to price fixing arrangements, the Commissioner, Dr. H. M. Tory, made certain specific recommendations. These included: regular analyses of imported coals and classification according to suggested standards of qualities; maintenance of competition in the sources of supply and in the distribution of anthracite; action by municipalities to prevent such practices as short-weighting and the incorrect description of various classes of coal; and the encouragement of consumers' co-operative enterprises engaged in the distribution of coal.

Mr. Bernard Bissonnette, K.C., of Montreal, acted as counsel for the Commission, and Professor K. W. Taylor as economic adviser. The report on anthracite coal made in 1933 by the Registrar of the Combines Investigation Act (Labour Gazette, May, 1933) was taken as a basis for the investigation, and the Registrar was available for consultation by the Commission. The hearings, which began on July 8th, were held in public sessions at Montreal, Toronto, Quebec, Halifax, Saint John, and Ottawa, and 106 witnesses, including members of all branches of the coal trade, port authorities, trade and other organizations, were examined.

The Commissioner reported that anthracite coal is still the most important fuel for domestic heating in the provinces of Ontario and Quebec and that the main sources of supply are the United States, Great Britain (Wales and Scotland), and Russia, any one of which alone could supply the whole of Canada's requirements. The embargo which was placed on the importation of Russian coal in February, 1931, and which was not lifted until September, 1936, eliminated importations from that country during the period covered by the report. Anthracite coal is also brought to Canada from Germany, Belgium, and French Indo-China and, while these countries could not supply all the needs of the Canadian market, they have recently become increasingly competitive factors in it. With the exception of the United States, where independent producers exist outside the main organization, the export prices in all these countries were found to be centrally controlled.

In the Pennsylvania coal fields of the United States production and sales were dominated by the seven "line" companies until the N.R.A. collective agreements came into effect. With the decline of the N.R.A. after the adverse decision of the Supreme Court, the larger producers and brokers formed the Anthracite Institute based on the "open price plan", and members of this association now control approximately 85 per cent of the total anthracite tonnage. There are a number of independent companies outside the Institute. Their prices range from twenty-five to seventy-five cents below the prices of the Institute members. The Commissioner found that anthracite from the United States is freely available to all responsible dealers in Canada and the fact that importations are principally made by rail assures such dealers of direct access to the sources of supply.

In Wales a process of amalgamation has resulted in the formation of Amalgamated Anthracite Collieries, Limited, which now controls about 80 per cent of the anthracite production and which sells through its own agents in various markets of the world including Canada. The majority of the remaining "independent" producers either sell by long-term contract through a common export broker such as T. T. Pascoe Company, which in this way controls 10 per cent of the total Welsh production, or dispose of their entire output in a specific market for a given season. The Commissioner found that the Amalgamated and Pascoe companies, which together control 90 per cent of the total Welsh production, work in close co-operation in so far as the Canadian market is concerned. Almost all Scotch anthracite reaching Canada is sold through a company owned and controlled by an organization of Scottish producers.

The German Coal Cartel (Kohlensyndikat) controls the export of German anthracite coal through five selling agencies. Up to the end of 1935 the T. T. Pascoe Company had contracts with at least two of these agencies and possessed some sort of exclusive control over sales of German coal in Canada, but the Commissioner found that in 1936 German anthracite was being offered freely in Canada and at reduced prices. Belgian anthracite is now reaching Canada in considerable quantities. It is similar to the German coal in quality and export sales are a monopoly of the Belgian State Railways. In French Indo-China the anthracite mines are operated under concessions granted by the French Government. Freight rates are the controlling factor in the marketing of this coal in Canada.

The dominant anthracite importing organization in Canada is the "Webster Group,"

originally composed of the Canadian Import Company and its subsidiaries, the British Coal Corporation and the St. Lawrence Stevedoring Company, but now including also The F. P. Weaver Company and Hartt and Adair Coal Company. This group through their agency agreements with Amalgamated Anthracite Collieries and T. T. Pascoe Company, and their facilities for discharging and handling overseas coal, have possessed a complete monopoly in the city of Quebec since 1931. During the years 1933 to 1935 inclusive they have controlled approximately 74 per cent of Welsh importations and 58 per cent of all overseas importations of anthracite coal in the Montreal market, and 40 per cent of Welsh imports in the city of Toronto.

Altogether the "Webster Group" controlled between 80 per cent and 90 per cent of all Welsh anthracite reaching the Canadian market during the years 1933 and 1934. The unusual importance of this control over such a high percentage of Welsh anthracite coal lay in the preference shown by Canadian consumers for British coal and in the popularity of the blower furnace which had been developed for the purpose of burning small sizes of Welsh anthracite and which would burn only anthracite which possessed a low ash fusing point. Both Scotch and United States anthracite are high ash fusing point coals and so are unsuitable for blower use. Of the other low ash fusing point anthracites, Russian was shut out of Canada by embargo, German supplies were controlled by the Pascoe Company, and Belgian and Indo-Chinese anthracites had not yet become an important factor in the Canadian market. During these years, therefore, the "Webster Group" not only dominated the Canadian market in respect to all kinds of overseas coal, but possessed a still greater control over the only available coal suitable for use in blower furnaces, a coal which was in increasing demand.

The Commissioner reported that this control was somewhat relaxed in 1935, when the Pascoe Company began to ship to an importer outside the "Webster Group," and still further relaxed in 1936 when German anthracite began to be more freely offered in Canada, and Belgian and Indo-Chinese importations were greatly increased. The lifting of the embargo on Russian anthracite is expected to make still further supplies available to "independent" Canadian importers.

The report describes in some detail the various and complicated transactions whereby the "Webster Group" secured control of The F. P. Weaver Company, Hartt and Adair Coal Company, and Lane and Robitaille, Ltd. The finding of the Commissioner is that, with the exception of the last named, which was resold, these companies should be considered to be constituent parts of the one organization which, through its affiliations in England, effectively controlled the importation and sale of Welsh anthracite in Montreal and Quebec and, to a less extent, in Toronto, and during 1933 to 1935, the importation of German anthracite as well; and that during those years such anthracite could not be obtained freely or in adequate quantities by other Canadian importers.

The report also describes the various agreements existing between the British exporters, particularly the Amalgamated Anthracite Collieries, and the Canadian importers, particularly the "Webster Group," both with regard to the control of supplies and the handicaps placed in the way of competitors. The various "over-riding" or special commissions provided in these agreements for the various importers are strongly condemned as having, in the opinion of the Commissioner, no adequate justification for their imposition.

While production costs in Wales were not secured during the investigation, the agreements between Amalgamated Anthracite Collieries and its Canadian agents provided that export prices to Canada should not exceed the Amalgamated Company's average f.o.b. prices obtaining on the Swansea market. In Canada the wholesale prices of domestic sizes showed a pronounced downward trend during the past seven years, while the wholesale prices of the small (blower) sizes showed a slight upward trend. This was in accordance with the changes in the demand for the two sizes. The fact that importers' gross margins, which had been increasing from 1930 to 1933, showed a very marked decrease since that time was attributed in a large measure to the proceedings taken under the Combines Investigation Act as a result of the investigation concluded in 1933. Retailers' gross margins also showed a general decline. It is noted, however, that in Quebec, where the Canadian Import Company held a complete monopoly and where, incidentally, retailers' margins were exceedingly narrow, the wholesale price was a dollar a ton higher than in Montreal.

The net profits on the Montreal anthracite operations of the Canadian Import Company and its affiliated British Coal Corporation, after allowing for discharging, preparation and handling at actual cost to the St. Lawrence Stevedoring Company, was stated by the company to be 33 cents per ton before income tax, on 487,667 tons of coal handled at this principal centre of distribution in 1935. The corresponding net profit was similarly stated at 67 cents per ton for the average of the two years 1933

and 1934, on 463,330 tons handled in 1933 and 543,895 tons in 1934. Corresponding profits per ton as ascertained by accountants engaged by the Dominion Government to assist in the 1933 inquiry were 55 cents for 1929, 73 cents for 1930, 64 cents for 1931, and 72 cents for 1932, with a somewhat lower percentage of administrative costs allocated to anthracite operations in these earlier years.

The Commissioner reported that the investigation had failed to disclose any evidence as to price fixing arrangements. The establishment of prices in any one city or district is usually effected by one of the large importers or dealers fixing his own price which local competitors are content to follow.

The report contains tables of prices indicating their general trend, statistical data of margins, volume of sales, composition of gross margins, costs of operation and other bases of the Commissioner's conclusions. It contains also general comments on the state of the retail trade and the position of the retailers, a survey of the situation with regard to dock space occupied and available at the various eastern ports, information as to labour conditions in the coal business, and various representations and recommendations which were made to the Commission concerning objectionable conditions existing in the trade.

The investigation disclosed a considerable variation in the quality of anthracite coal sold in Canada and a number of instances where steam coal had been mixed with anthracite or sold as anthracite under special names likely to mislead purchasers as to its origin and quality. In this connection the Commissioner recommended that a more vigorous use be made by the municipalities of their power to eliminate frauds and other objectionable practices in the coal trade, that all anthracite entering Canada be classified according to a recommended standard, and that continuous and systematic analyses of such anthracite be conducted.

The Commissioner recommended that every encouragement should be given to the establishment of genuine co-operative organizations.

It is also recommended that, insofar as the present fixing of export prices in the countries of origin permit, freedom in the importation of anthracite coal should be maintained and that in this connection the peculiar requirements of Canada in respect to anthracite of a low ash fusing point should be fully recognized as a problem distinct from the availability of Scotch or United States anthracites which are unsuitable for blower use. Accordingly it is recommended particularly that steps be taken to keep open the channels of trade in this low ash fusing point anthracite. It is further recommended that importations should be made directly from the country of origin rather than through agencies which may already control competitive supplies in another country. Finally, as a means of accomplishing these results and maintaining competition in the best interests of consumers, it is recommended that the Combines Investigation Act should be continued to be enforced.

Old Age Pensions in New Brunswick

The first annual report of the New Brunswick Old Age Pensions Board, tabled in the Legislature on March 4, 1937, indicates that pension payments during the last four months of the last fiscal year amounted to $469,283, and that the number of pensioners on the roll at the end of the fiscal year, October 31, was 9,107—males numbering 4,533, and females, 4,574. The average monthly pension was $13.07.

"Wage Executions For Debt" is the title of a bulletin issued recently by the Bureau of Labor Statistics, United States, Department of Labor. This survey, deals extensively with the subject of consumer-debt and summarizes the results of investigation of the frequency of levies by creditors against the wages of employees in representative industrial communities.

The formaton of a labour union among textile workers in the municipality of St. Gregoire de Montmorency is announced in a recent issue of the Quebec Official Gazette. The new association is known as the National Catholic Syndicate of the Textile Industry of St. Gregoire de Montmorency.

The LABOUR GAZETTE for January, 1937, page 4, contained a reference to an announcement made by the Hon. David Croll, Ontario Minister of Welfare and Municipal Affairs, that, effective January 1, 1937, the Ontario Government would assume the entire cost of mothers' allowances in the province as well as taking over the municipal share of the cost of old age pensions. In his budget address on March 9, Premier Hepburn stated that the new financial arrangement in this regard would commence on April 1, instead of January 1, as previously announced. Hon. Mr. Hepburn said it was found that the province was without legislative authority to make payments for January, February and March and for that reason the new arrangement could not come into effect until April 1.

CODES IN ALBERTA

Regulations Governing Automotive, Wholesale, and Barbering Trades

On October 19, 1934, the Department of Trade and Industry Act (Labour Gazette, May, 1934, p. 442), was proclaimed in force in Alberta. Authorizing the establishment of codes to regulate wages, supervise labour conditions and control prices, the Act applied to wholesale and retail dealers, druggists, printers, restaurant-keepers, dry-cleaners, barbers and hairdressers and plumbing, heating and sanitary engineers. Other trades might petition to be brought within the scope of the Act. A section provided for the registration and licensing of persons engaged in the specified trades.

No action was taken under the authority of the Act until 1936, when "codes of fair competition and business practice" for the retail trade and the cleaning and dyeing industry were issued. (Labour Gazette, May, 1936, pp. 424-426). These were declared effective from April 6, 1936 and contained labour provisions and a schedule of approved prices below which no firms or operators were to be permitted to sell their services.

During the first session of the Legislature in 1936, the Department of Trade and Industry Act, was amended to repeal the section under which trades might be registered and licensed and to substitute a section empowering the Lieutenant-Governor in Council to make any necessary regulations to carry out the provisions of the Act. This amendment was deemed to have been in force from October 18, 1934. During the same session The Licensing of Trades and Businesses Act was passed and proclaimed in effect from April 15, 1936. (Labour Gazette, June, 1936, p. 499). This Act widened the scope of such powers as had been conferred on the Lieutenant-Governor in Council in respect of the designating and licensing of trades under the Department of Trade and Industry Act. Codes approved since the passage of this legislation have been issued under the authority of both Acts.

A code covering the commercial printing industry was issued on October 17, 1936. (Labour Gazette, November, 1936, pp. 1004-5). On November 16, codes covering barber shops, the wholesale trades, the automotive and photo finishing trades were also published in the Alberta Gazette.

In January, 1937, charges were brought against an Edmonton printing company for printing letterheads at a price below that fixed in the printing code. The case was dismissed when the magistrate ruled that the Order in Council was not effective to bring the printing code into force since no date had been specified. Accordingly, the printing code was gazetted again on February 15, 1937, with the stipulation that it should come into force on the date of publication. At the same time the automotive and photo finishing trades were proclaimed within the Act and codes covering these trades, as well as barber shops and the wholesale trades, were re-issued to come into force at once.

By amendments published in the Alberta Gazette of February 27, 1937, the price schedules in the codes applying to the automotive and photo finishing trades, commercial printing, cleaning and dyeing, wholesale and barber trades, have been struck out. Common to all the codes are provisions for dealing with certain unfair competitive trade practices. In addition, some of the amended codes contain certain provisions designed to improve working conditions.

As indicated above, the codes for printing, cleaning and dyeing and the retail trades have been summarized in the Labour Gazette. No changes have been made in the retail code. The only change made in the other two codes are those relating to prices, except that in the printing code, the labour provisions, as originally enacted, have been struck out. The codes governing the automotive, photo finishing, barber shops and wholesale trades as gazetted on February 15, 1937, and amended on February 27, 1937, declare certain practices to be unfair, and all but the photo finishing code lay down provisions concerning labour. These provisions are summarized in the following paragraphs:

Automotive Trades.—In the automotive trades, employees or persons seeking employment may not be required to purchase stock in the company before obtaining past due or future wages, or to join or refrain from joining any association. No person under 16 years of age may be employed and wages lower than those established under the Minimum Wage Act or the Industrial Standards Act may not be paid.

Wholesale Trade.—The wholesale trade is provided with an advisory committee of six members, representative of the trade. Reasons for cancellation or suspension of licences by the Department of Trade and Industry must be given to the committee. The code stipulates that wholesalers must comply with provincial laws regulating hours and wages. They must close on Saturday at noon, or not

later than 1 p.m., and on Sundays and statutory holidays, except in cases of "dire emergency."

Barbering Trade.—In the barber trade a journeyman barber may not be paid at a rate less than $15 per week, with a commission of 60 per cent of his gross weekly receipts. Payment for part days must be at an hourly rate of 40 cents. Employers must make reasonable provisions for the health and safety of the workers and no person under 16 years of age may be employed. The code declares that employees shall have the right to organize and bargain collectively through representatives of their own choosing and shall be free from the interference, restraint or coercion of employers in the designation of such representation or in self-organization or in other concerted activities for the purpose of collective bargaining or other mutual aid or protection. Employees or persons seeking employment shall not be required, as a condition of employment, to join any company union or to refrain from joining, organizing or assisting a labour organization.

STATISTICS OF STEAM AND ELECTRIC RAILWAYS IN CANADA 1935

THE Dominion Bureau of Statistics has recently issued its annual reports on Statistics of Steam Railways of Canada and Statistics of Electric Railways of Canada, both of which cover the year ending December 31, 1935. Copies of these reports may be obtained from the King's Printer, Ottawa, at a cost of 50 cents and 25 cents respectively.

Steam Railways

The report on statistics of steam railways indicates that although railway gross earnings in 1935 did not show gains each month over corresponding revenues of the previous year, as they did in 1934, the declines in March, May and June were more than offset by increases in the other nine months and the total increased from $300,837,815 in 1934 to $310,107,155 or by 3·1 per cent in 1935. Operating expenses, however, increased at a greater rate from $251,999,667 in 1934 to $263,942,899 in 1935, thereby reducing net operating revenues from $48,838,148 to $46,164,256, and the net corporate loss of all railways before deducting dividends and reserves was greater by $1,868,761, increasing from $81,738,164 to $83,606,925.

Freight revenues were larger than in 1934 by $8,229,202 or 4 per cent, but passenger revenues increased by only $262,606, or by less than one per cent. Excess baggage, sleeping car and parlour car and chair car receipts also declined. A decline was registered in express and milk receipts but mail revenue showed an increase of $100,442 or 1·5 per cent. Taxes increased from $8,990,970 in 1934 to $9,072,259 in 1935.

The tonnage of revenue freight carried increased and although the number of passengers carried showed a slight decrease, passenger miles increased slightly. Shipments of agricultural products were lighter than in 1934 by 913,806 tons or 5·5 per cent. Animal products decreased 9·6 per cent but mine products increased 1·8 per cent, and forest products 4·7 per cent. Manufactures and miscellaneous increased from 17,409,568 tons to 18,858,764 tons. Automobiles, trucks and parts were heavier by 345,044 tons and iron and steel increased by 240,605 tons. The tonnage of agricultural implements also showed an increase of 45,982 tons or 42 per cent.

"The average number of employees increased from 127,326 to 127,526 and the pay roll increased from $163,336,634 in 1934 to $172,956,217. A reduction in basic rates of pay of 15 per cent was made in 1933 and was carried through to January 1, 1935 when 3 per cent was restored and another 2 per cent was restored on May 1, 1935. Somewhat corresponding reductions and restorations were made in salaries. The effect of these changes raised the average hourly pay of all classes of employees except maintenance of equipment, regular apprentices and news-agents, the increase for employees on hourly rates being from 53·1 cents in 1934 to 55·7 cents per hour and for employees on daily and monthly rates from $5.216 per day, to $5.442 per day. Other factors also enter into these increases. The average number of employees is the sum of the counts made each month divided by 12 and consequently does not reflect short time. The number of hours and days worked is the total full time and part time positions. Reducing the hours to days on an eight hour basis and adding to the days worked shows only slightly over one per cent increase in actual employment in time for less than a sixth of one per cent increase in the average number of employees."

As in former years, the report contains a table showing by classes of employees, the average number employed during the year, the total hours or days on duty, total salaries and wages paid, the average number of hours or days worked per employee in each class or occupation, the average earnings per hour or per day and per year.

The figures as to the number of employees in each class on hourly or equivalent rates, the average time worked and average earnings per hour and per year, were included in the supplement to the January issue of the Labour Gazette, on Wages and Hours of Labour in Canada, 1929, 1935 and 1936, Appendix B.

During the year reviewed by the report, the number of passengers killed in train accidents dropped from 16 in 1934 to 10 in 1935. None of these was killed in collision or derailments, but 8 were killed falling from cars and getting on and off cars. The number of passengers injured increased from 417 in 1934 to 432 in 1935.

The number of employees killed remained the same (43) as in the previous year and the number injured decreased from 1,119 to 1,026. Railway employees were absent from their duties because of injuries received in accidents (train and non-train) for 150,615 days as against 147,634 days in 1934.

The number of days lost through non-train accidents totalled 116,637 compared with 33,978 days lost through train accidents.

The number of other persons killed in train accidents increased from 236 to 269, due largely to a greater number of pedestrians and motorists being struck at highway crossings.

Non fatal accidents to employees were 1,026 in number affecting 869 trainmen, 64 truckmen, 3 switch tenders, etc., 8 stationmen, 23 shopmen, and 32 other employees. Classified by causes, there were: 43 accidents due to coupling or uncoupling, 23 to collisions, 15 to derailments 3 to parting of trains, 82 to falling from trains or cars, 173 to getting on or off trains or cars, 32 to being struck by trains, etc., 1 to overhead obstructions and 654 accidents classed as "other causes."

The report also contains informative statistics for each railway as to capital, receipts, and expenditures, track, equipment, traffic, etc.

Electric Railways

Traffic on electric street and suburban railways in Canada continued to increase during 1935, according to the annual report on "Statistics of Electric Railways of Canada." Statistics given in the report include figures for motor buses operated by electric railways.

Total fare passengers carried during the year amounted to 600,728,313 compared with 595,143,903 in 1934 and 585,385,094 in 1933. Traffic was still less than the 1932 level however and also less than for any previous year during the past decade. The outstanding increase in traffic was made in Hamilton, where the number of passengers increased from 12,413,821 in 1934 to 17,267,897 passengers in 1935. The report states that improved business conditions in Hamilton, restriction of competing taxis, and a reduction in the cash fare on January 16, 1935 from 7 to 5 cents were responsible for this improvement of 39 per cent.

Of the nine systems carrying over 10 million passengers per annum, five reported decreases in passengers carried. The Montreal system which carried almost one-third of the total showed a decrease of 0·8 per cent, Toronto a decrease of 1·3, Ottawa, 2·4 per cent, Quebec, 2·1 per cent and Calgary 1·6 per cent. Increases in the number of passengers carried were registered in British Columbia (Vancouver, Victoria, New Westminster, etc.) 3·05 per cent; Winnipeg, 2·9 per cent, Hamilton, 39·1 per cent and Edmonton Radial 8·9 per cent. Of twelve systems carrying between one and ten million passengers six reported losses and six reported gains, the net result being an increase of 3·1 per cent. The remaining eighteen smaller systems showed a loss of 1·6 per cent.

Total revenues of all systems increased in 1935 from $40,048,136 for the previous year to $40,442,320. Operating expenses were reduced during the year from $28,036,754 to $28,009,013 resulting in an increase in net operating revenues of $421,925 or from $12,011,382 to $12,433,307.

The number of employees was 14,381 compared with 14,544 in 1934, there being 7,082 conductors, motormen, and conductor-motormen in 1935 against 7,808 in 1934. Motor bus, coach and truck drivers and conductors numbered 595. Total salaries and wages were $18,649,516.97 compared with $18,546,749.55 in 1934. Statistics respecting the numbers and wages of various classes of wage earners are shown as follows:—

Maintenance of way, etc., trackmen, linemen, etc., 1,824 with total wages of $2,074,220.57.

Maintenance of electric cars—electricians 80, wages, $105,808.23; other employees 1,705, wages, $2,099,077.58.

Maintenance of motor bus-coach and truck-motor mechanics 90, wages, $124,968.31; other employees, 205, wages, $259,457.53.

Motormen, conductors and conductor-motormen, 7,082, wages, $9,029,836.68.

Substation employees, 205, wages, $312,646.11; other powerhouse employees, 498, wages, $718,221.98.

Motor bus, coach and truck drivers and conductors, 595, wages, $840,835.33; other employees, 702, wages, $761,204.64.

Accidents to employees were 2 fatal and 388 non-fatal; to passengers, 1 fatal and 1,517 non-fatal; to others, 61 fatal and 652 non-fatal, making a total of 64 fatal accidents and 2, 557 non-fatal accidents in 1935. Comput-

ing these figures the report points out that only one passenger of the 600·7 million carried was killed, and 1,517 were injured. Also two employees and sixty-one other persons were killed in accidents. Of these, the report states, thirty-six were pedestrians, twenty-three were motorists, one was riding in a vehicle other than a motor vehicle, two were employees other than conductors, motormen and bus drivers, and one was classed as "other persons." Collisions accounted for fifty of these deaths, electric contact for one, and the remaining thirteen were from other causes.

Passenger cars, closed, in service were as follows: two men, 1,609 in 1935 as against 1,682 in 1934 and 2,207 in 1930; one man 1,566 in 1935 as against 1,543 in 1934; either two or one man, 220 in 1935 as against 213 in 1934. All passenger cars were 3,707 in 1935 as against 3,748 in 1934. There were 552 buses in 1935 compared with 537 in 1934 and 520 in 1930.

Detailed statistics for each railway are also given in the report showing capital employed, receipts and expenditures, trackage, equipment, traffic, employees, accidents, etc.

NEW FACTORY LEGISLATION IN GREAT BRITAIN, 1937

In the February issue of the Labour Gazette reference was made to the British Government's new Factories Bill which was issued on February 2, 1937. In the *British Ministry of Labour Gazette* for February, a more detailed review of the new bill was given as follows:

The second reading of the Factories Bill, 1937, was moved by the Home Secretary in the House of Commons on February 11. The object of the bill, as described in the preamble, is " o consolidate, with amendments the Factory and Workshop Acts, 1901 to 1929, and other enactments relating to factories; and for purposes connected with the purposes aforesaid."

In a memorandum, prepared by the Home Office, showing the extent to which the bill differs from the existing law, it is stated that the bill proposes to revise the present law in conformity with modern standards and conditions, and will provide for greatly improved arrangements for securing the safety, health and welfare of factory workers. The proposals in the bill are the outcome of a careful review of the results of the long experience acquired by the Home Office in the administration of the Act of 1901, of enquiries by numerous committees which have considered different parts and aspects of the wide field of industrial regulation, of researches carried out by scientific bodies, and of experiments and investigations conducted by the industries themselves and by individual manufacturers. Further, they have been framed in the light of prolonged discussions which have taken place with representatives of the employers and of the workers.

The bill does away with the distinction in the present law between "factories" and "workshops," and between textile and non-textile factories. There is a new definition of the term "factory," which will cover, in a general definition, the great majority of works, with the addition of certain specified classes which are not or may not be sufficiently covered by the general definition.

Health, Safety and Welfare.—The clauses dealing with these subjects number sixty-one, as compared with eighteen sections in the Act of 1901: the six clauses relating to "welfare" (which deal with such matters as the supply of drinking water, washing facilities, accommodation for clothing, seats for female workers, first aid, etc.) had no counterpart in the old Act. Notable changes are introduced in regard to the cleaning of factories, overcrowding, temperature, transmission, machinery, hoists and lifts, the cleaning of machinery by women and young persons, steam boilers, and the removal of dust or fumes. The provisions as to means of escape in case of fire are extended and strengthened.

Other important new proposals deal with lighting, medical supervision, and numerous special safety provisions covering a great variety of cases. There are also new provisions relating to underground rooms, lifting excessive weights, and the prohibition of the importation or sale of articles in the manufacture of which a prohibited material or process has been used.

Employment.—The bill contains an important revision of the existing law in regard to hours of employment of women and young persons. The main features of the new scheme are a normal maximum weekly limit of 48 working hours, a daily maximum limit of nine working hours, and a maximum period of employment (inclusive of intervals for meals and rest) of eleven hours.

Overtime is allowed (subject to conditions) for women and young persons of 16 years of age and upwards. No overtime will be permissible in the case of young persons under 16 years of age, and as regards young persons of 16 years and over, the Home Secretary will be empowered to prohibit or restrict the overtime

for those employed in any particular process if he is satisfied that it will prejudicially affect their health. The overtime, for women and young persons over 16, is restricted in general to 100 hours a year; but power is given to the Home Secretary to increase this amount, so far as concerns the employment of *women* up to a maximum of 150 hours in any class of factory liable to seasonal or other special pressure of work. The overtime may not exceed six hours in any week, and can only take place in 30 weeks in any year; but the Home Secretary is given certain powers to relax these requirements either for any class or description of factory where the exigencies of the trade make it necessary, or for any particular factory if the increase is necessary by reason of an unforeseen pressure of work or other emergency.

Part VI of the new bill re-enacts with amendments some of the special provisions contained in the Act of 1901 which relax the general provisions as to hours of employment, holidays and Sunday employment in the case of particular classes of work. The system under which young persons under 16 years of age must, on being taken into employment, be certified by the certifying surgeon—renamed in the bill "examining surgeon"—as fit for employment, is maintained and improved.

Docks, Warehouses, Buildings, etc.—Part VII of the bill continues the arrangements under which certain specified provisions of the Act are applied to docks and warehouses. It also applies certain specified provisions (notably the power to make special regulations for safety and health) to certain classes of work done by shore workers in ships in harbour or wet dock; to building operations, which are only partly within the existing Act; and to works of engineering construction, which now come within the scope of the Act for the first time."

ANNUAL REPORT OF UNITED STATES SECRETARY OF LABOUR

Observations on Lag Between Production and Employment—Survey of Future Activities

THE twenty-fourth annual report of the United States Secretary of Labour, recently received, refers specifically to a factor that is particularly in evidence with the return of more normal industrial conditions, viz.—the lag between production and employment.

Commenting on this problem, the observations of Miss Frances Perkins, Secretary of Labour, are as follows:—

"Notwithstanding the many significant advances recorded, there is still a long way to go before predepression levels of employment and earnings are reached and before working and living conditions attain those standards of which the resources of our country and the productive capacity of our people admit.

"It is a matter of concern that employment has lagged behind production. Longer hours, expiration of an interval before the service industries reflect the increase in industrial production and employment, technological advance and gains in the efficiency of management are contributing factors to this discrepancy. There are some who hold that it is but a temporary maladjustment which will disappear when recovery gets more momentum; others, that it is likely to continue.

"Whatever the developments in the future, the fact that employment has not in every industry kept pace with production is one of the immediate aspects of the problem of unemployment with which we are confronted. Nor have we sufficient data to enable us, with precision, to formulate an immediately practicable plan to solve it. Shorter hours are proferred as an essential measure. But how much shorter is the all-important question. That a minimum should be set below which wages cannot fall is another generally accepted necessity.

"Voluntary agreements on shorter hours and minimum fair wages among employers within an industry and possibly between one industry and another would be a step in the right direction. Whether such agreements are likely without compulsion of legislation is questionable. Continued leadership on the part of the Government in the restoration of employment and increase in the purchasing power of wage earners is being more and more accepted as essential in the public interest."

Future Activities

Surveying the future activities of the United States Department of Labour the Secretary of Labour indicates the program to be in the direction of:—

1. Intensifying its efforts for greater gains with respect to each of its following objectives:
   - (*a*) Steady work in private employment.
   - (*b*) Adequate assistance in securing jobs through the United States Employment Service.
   - (*c*) Adequate facilities for training.
   - (*d*) Shorter hours of work.
   - (*e*) Adequate annual income from wages.
   - (*f*) Safe and healthful conditions of work.

(*g*) Better industrial relations through collective bargaining, conciliation, mediation, and arbitration.

(*h*) Elimination of child labour.

(*i*) Adequate care and support when incapacitated by reason of accident, industrial disease, unemployment, or old age.

(*j*) Improving living and social conditions for wage earners.

2. Co-operating with each of the States in—

(*a*) The development of a specific program for the advancement of labour standards designed to meet its respective needs.

(*b*) Conferences within a State to promote this program.

3. Extending its scope to include all groups of wage earners.

4. Providing more and more adequate information with respect to employment, hours, wages, and other conditions affecting the work and life of wage earners as a basis for sound public policy.

5. Promoting participation of wage earners in functions concerned with their employment, social, and living conditions.

The Secretary considered that in achieving certain objective "legislation and the use of the police powers of the State or the Government is practical only in obtaining minimum standards and well-agreed-upon desirable conditions, such as those that have to do with hours of work, physical conditions, compulsory insurance, et cetera."

Continuing, Miss Perkins stated: "Beyond these there is a field in which more desirable standards are attainable by co-operation between workers and employers and for which knowledge, education, and persuasion are needed on both sides to permit as good a living as possible for people who work in industry. A high objective can be promoted by effective collective bargaining in which both parties to the bargain insisting upon their inalienable rights also recognize and practice the equally binding obligations which such rights impose."

The report also contains cendensed reports of the activities of the bureaus and services of the Department of Labor for the period under review including the United States Conciliation Service, the Employment Service, Office of the Solicitor, Office of the Chief Clerk, the Division of Labor Standards, the Library of the Department, the Bureau of Labor Statistics, the Immigration and Naturalization Service, the Children's Bureau, the Women's Bureau, and the United States Housing Corporation.

In 1935, there were 129 concerns in Canada which were occupied chiefly in the manufacture of articles from sheet iron or steel, tinplate, Canada plate or terne plate, according to a report issued recently by the Dominion Bureau of Statistics entitled "The Sheet Metals Products Industry in Canada, 1935." Capital employed in these establishments in 1935 amounted to $47,369,004, of which $24,048,783 was the value placed on land, buildings and equipment, $10,861,137 was the inventory value of materials and finished products and $12,459,084 the total cash, bills and accounts receivable, etc. The works in Ontario accounted for 53 per cent and in Quebec for 26 per cent of the total investment. The average number of employees was 6,580 in 1935 and their earnings amounted to $6,802,698 compared with 6,118 workers and $6,264,010 for salaries and wages in 1934.

According to a report entitled "The Railway Rolling Stock Industry in Canada, 1935" production in that industry during the year reviewed was valued at $41,213,039 an increase of 20 per cent over the $34,352,911 of the previous year, which in turn was 14 per cent over the $26,672,265 reported for 1933. Employees in the industry in 1935 numbered 16,921 with salaries and wages at $18,785,671, the comparative figures for 1934 being 16,095 employees and $16,312,271 wages.

Among the reports presented at the conference held by the National Association of Manufacturers of the United States, were reports of Committees on "Relation of Government to Industry"; "Industrial Research"; "Employment Relations"; and "How Government Industry Competes with Private Industry."

The average number of employees in the primary iron and steel plants was 9,523 in 1935 compared with 7,400 in 1934, according to an industry report entitled "The Primary Iron and Steel Industry in Canada, 1935" issued recently by the Dominion Bureau of Statistics. The report states that about 61 per cent, or 5,682 of these workers were employed in Ontario, 1,791 in Quebec, 1,630 in Nova Scotia, 304 in Manitoba and 116 in Alberta. Payments in salaries and wages amounted to $12,279,390 in 1935, an increase of 36 per cent over the total of $9,009,512 for 1934. The average wage per wage-earner was $1,246 in 1935 compared with $1,136 in 1934. Factory sales of pig-iron, steel, ferro-alloys and rolled products were also correspondingly in greater volume being nearly 33 per cent higher in 1935 than in 1934, values being $38,700,961 and $29,101,463 respectively.

COMPULSORY ARBITRATION IN FRANCE

According to *Industrial and Labour Information* of February 22, 1937, published by the International Labour Office, procedure for compulsory conciliation and arbitration has now become definitely established in France. This is in virtue of a Decree of January 16, 1937, issued under an Act of December 31, 1936, relating to the settlement of collective industrial disputes.

According to the main provisions of this Act all collective labour disputes in commerce and industry must be submitted to conciliation and arbitration before a strike or lockout is declared. Agriculture for the time being is outside the scope of the Act. The Act applies to disputes already in progress and makes it compulsory for both parties to resume work or reopen their establishments as the case may be. If it is necessary to appoint an umpire and the parties concerned cannot agree as to choice, a person will be chosen from among officials of the establishment or retired officials of the state legal institutions. Compulsory conciliation and arbitration proceedings must be organized in accordance with existing legislation. The arbitration award must be reasoned and is final and binding.

The Decree of January 16, 1937, provides for twofold procedure: compulsory conciliation proceedings, followed by compulsory arbitration. For the purposes of conciliation three authorities are set up: (1) Departmental committees; (2) joint mixed committees; (3) national conciliation committees.

(1) When a collective labour dispute cannot be settled by the parties concerned it is referred, in the absence of a collective agreement establishing conciliation and arbitration rules, to a departmental conciliation committee at the request of the party taking the initiative in the matter or, when necessary, by the prefect. The committee is presided over by the prefect or his representative and consists of employers and workers in equal numbers, the number of members for each side may vary from three to five with an equal number of substitute members. The members and their substitutes are appointed by the prefect, who may subdivide the committee into local or trade sections. Each section must include three to five members for each side and an equal number of substitutes. The divisional factory inspector, as a competent authority of the department, is to be present at the sittings of the committee in an advisory capacity.

(2) In the default of settlement of the dispute in four clear days, the matter is referred to a joint mixed conciliation committee which is presided over by a representative of the Ministry. Its members are appointed by the national trade federations of workers and employers to which the most representative unions of the parties in dispute are respectively affiliated. This committee then endeavours to conciliate the parties to the dispute.

(3) Again, if in the event of default of settlement within four clear days, the matter is referred to a national conciliation committee which is presided over by the Minister or his representative and consists of equal numbers of employers and workers chosen by the most representative confederations of employers and workers.

If the national conciliation committee is unable to settle the dispute in four clear days, it must draw up a report calling attention to the points on which disagreement subsists and request the parties to appoint a common arbitrator, or one arbitrator each. For this purpose, each of the two confederations must supply the Minister of Labour with a list of fifteen persons. If, within two clear days, in the absence of agreement among the parties as to the nomination of a common arbitrator, the Minister may choose an arbitrator from one or other of the lists referred to above. If the arbitrators cannot agree, within three days, as to the arbitration award or the designation, the Prime Minister may choose the latter from among officials of the establishment or retired officials of the State legal institutions.

Industrial and Labour Information states that it is interesting to note that the Compulsory Arbitration Act, while making awards binding makes no provision for penalties. This omission, it is stated, in the introductory memorandum to the Act, is voluntary as it is believed pecuniary penalties are likely to be useless and in such matters the main question is to define moral responsibilities. The opinion is also expressed in the memorandum that "very little experience will be necessary to introduce compulsory conciliation and arbitration proceedings in the habits of the country and to impose respect for a procedure the violation of which would arouse public opinion."

The Women's Bureau of the United States Department of Labor has recently issued Bulletin No. 144 entitled "State Labor Laws for Women." This study, which is a revision of a previous bulletin, indicates the situation in the various States in regard to laws relating to hours, industrial home work, prohibited or regulated occupations, night work, minimum wages, etc.

33833—5½

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

1938 Session of the Conference

The Governing Body of the International Labour Office, at its Seventy-Eighth Session, decided to place the following four questions on the agenda of the 1938 session of the International Labour Conference:

1. The regulation of hours of work and rest periods in road transport undertakings;
2. Technical education and apprenticeship;
3. The regulation of contracts of employment of indigenous workers; and
4. The recruiting, placing and conditions of labour (equality of treatment) of migrant workers.

Hours in Coal-mining

At the Seventy-Eighth meeting of the Governing Body of the International Labour Office, it was decided that a preparatory conference on hours of work in coal mines should be held in October next. Invitations will be extended to representatives of Governments, employers and workers to attend this conference.

The Development of Collective Agreements in Industry

Interesting data relating to the part played in industrial and economic life by collective agreements between employers and workers are given in a report just published by the International Labour Office.

The collective agreement system, which originated and developed in Great Britain during the nineteenth century, spread later to the continent of Europe and to some extra-European countries, and made rapid progress immediately after the world war. Subsequently, the extension of the system somewhat slowed down, mainly as a consequence of the economic depression; but in the last few years it has again advanced, particularly in the United States, and more recently in France, Belgium and Luxemburg.

The report states, for example, that no fewer than 6,288 collective agreements were in force in Sweden in 1934, and that they covered 25,864 employers and 674,700 workers. In the Netherlands in the same year there were 1,132 agreements covering 25,431 establishments and 258,185 workers. In Norway, 2,534 agreements covered 203,502 workers. In Austria in 1933 there were 1,660 agreements covering 174,067 establishments and 489,480 workers. In Germany, in 1929, 8,925 agreements covered 997,977 establishments and 12,276,060 workers.

The number and variety of the questions dealt with in various countries by collective agreements are considerable. They include matters relating to conditions of labour (wages, hours of work, conditions of engagement and dismissal, apprenticeship, insurance, etc.), and also matters connected with the relations between employers and workers (works regulations, disciplinary methods, penalties, settlement of individual labour disputes, the prevention and settlement of collective disputes, etc.)

In a large number of countries collective agreements are recognized by law, and in some cases legislative provision is made for the possible extension of the agreements to third parties in the trades concerned.

The report compiled by the I.L.O. gives a list of over a hundred laws relating to collective agreements in the following thirty-nine countries: Argentina, Australia, Austria, Brazil, Bulgaria, Canada, Chile, China, Cuba, Czechoslovakia, Denmark, Estonia, Finland, France, Germany, Great Britain, Greece, Hungary, India, the Irish Free State, Italy, Latvia, Luxemburg, Mexico, the Netherlands, New Zealand, Norway, Poland, Portugal, Rumania, the Union of South Africa, Spain, Sweden, Switzerland, Turkey, the U.S.A., the U.S.S.R., Venezuela and Yugoslavia.

The place taken by collective agreements in the economic structure of the community is described, and attention is drawn to the tendency in modern times towards a greater standardization of working conditions, especially within each industry—a tendency which facilitates the collective regulation of working conditions not only by voluntary agreements but also by state action.

Finally, the report contains a chapter showing in what way and to what extent collective agreements can be utilized, together with national legislation, in the application of International Labour Conventions.

Asiatic Labour Problems

At the 20th (1936) Session of the International Labour Conference, on the proposal of the Indian and Japanese workers' delegates, a resolution was adopted for the holding of an advisory conference on Asiatic labour problems and for the setting up of a permanent committee of Asiatic countries.

The Office submitted to the February Session of the Governing Body a note on the possible agenda of the proposed conference, the countries to be invited, and the cost of the meeting. It was suggested in the note

that a primary purpose of the conference should be to make a general survey of the development of labour conditions of Asiatic countries in relation to the Draft Conventions and Recommendations of the International Labour Conference. The proposed Asiatic conference might also study special problems arising out of the industrialization of Asia.

As regards the composition of such a conference, the Office suggested that the Asiatic countries which are members of the International Labour Organization — Afghanistan, China, India, Iran, Iraq, Japan and Siam — might be invited to be represented by three delegates representing Governments, employers and workers, and that a similar invitation might be sent to the following countries having dependencies in Asia: France, Great Britain, the Netherlands, Portugal and the United States of America.

Finally, the Office submitted provisional estimates of the cost of holding a conference, and indicated the possible methods of financing it.

The Governing Body instructed the Director to forward the note of the Office to the Governments concerned, and to ask their opinion on the holding of the conference and on the setting up of a permanent committee of Asiatic countries.

Native Labour Problems

The Governing Body of the I.L.O. has accepted an invitation from the Government of the Union of South Africa to send a delegation to study native labour conditions in that country. The letter from the Government stated that "if the Governing Body would feel disposed to send a small delegation from among its members to inform themselves at first hand on native labour conditions in South Africa, the Union Government would be happy to extend a cordial invitation to them as their guests during their stay in the Union for that purpose. The delegation might consist of a representative from each of the Government, employers' and workers' groups constituting the Governing Body, assisted in addition by one or two members of the International Labour Office."

The Director of the I.L.O. has been instructed to express to the South African Government the Governing Body's appreciation of the invitation and to consult with the Government as to the arrangements for the visit.

It is the practice of the I.L.O. to take every available opportunity for the first-hand study of native labour conditions. In recent years members of the staff have visited Indo-China, the Belgian Congo and British West Africa in order to study on the spot the labour conditions of those territories.

Publications of the I.L.O.

"Industrial and Labour Information," the weekly bulletin of the International Labour Office, contains in its issue of February 1st references to two recent publications of the Office, namely, "Maritime Statistical Handbook" and "World Statistics of Aliens."

Maritime Statistical Handbook

This volume contains statistical information for as many countries as possible on the following matters: (1) salaries and wages of merchant marine personnel; (2) number of merchant marine personnel; (3) classification of sea-going merchant tonnage. This volume owes its origin to the negotiations and discussions which have been going on for the last two years under the auspices of the International Labour Office with the object of arriving at an international agreement as to certain minimum standards on a number of questions affecting the conditions of employment of merchant seamen, including in particular the big question of hours of work on board ship and manning and also the question of holidays with pay. It was felt that a reference book containing authoritative data on the three matters referred to above might prove of practical interest in connection with these discussions.

World Statistics of Aliens

This publication is a statistical study of alien populations in the various countries of the world.

According to this study, there were throughout the world, in 1930, 28,900,000 aliens, or persons living in another country than their own. This figure represents 1·6 per cent of the total world population, estimated at some two thousand million persons.

The countries with the greatest numbers of aliens were the United States, with 6,300,000 (or 21·8 per cent of all aliens recorded in the world), and Argentina, with 2,800,000. Then came the following countries: France, which had 2,400,000 in 1926 and 2,700,000 in 1931; Brazil, with 1½ million in 1920; British Malaya, with 1,870,000; Siam, with 1 million; and Germany, with 787,000.

The countries where the increase in the number of aliens was the greatest were, in ascending order, in Europe: Greece, Italy, France and the Netherlands; outside Europe: Argentina, Canada, Hong Kong, the Netherlands Indies, British Malaya and Korea.

However, in order to have a fairer idea of the importance of the problem of aliens in a country, account must be taken of the number of aliens per thousand inhabitants. The average proportion for Europe (not including the Soviet Union) was 15·4, but it rose to 186 in Luxemburg, 87 in Switzerland, 66 in France, 43 in Austria and 39 in Belgium. The following countries have figures below the average proportion: Germany (12), Bulgaria (10), Hungary (9), Turkey (6), Portugal (5), among other, Italy and Finland (3).

Important changes have taken place in this field since the War. While in Germany (present territory) the number of aliens decreased, France, which in 1910 had 29 aliens per thousand inhabitants, had 39 per thousand in 1921 and 66 per thousand in 1931. Switzerland, which in 1910 had the highest proportion in Europe (148 per thousand), after that period had a decrease which has continued (104 in 1920 and 87 in 1930).

The number of Asiatics in foreign countries increased from 5 million in 1910 to 9½ million in 1930, but the number of Europeans abroad, although it slightly decreased from 1910 to 1930, was still much greater—22,400,000 in 1930, or more than double.

The present volume is the first international study made of national census figures relating to aliens. It is a comparative study of the censuses of 1910, 1920 and 1930, dealing with 141 territories. It brings out the difficulties underlying an international comparison of the results of such censuses because of the lack of comparability of national statistics and the divergences as to the notion and definition of an alien.

"The Co-operative Movement and Better Nutrition"

The International Labour Office has just issued a report entitled "The Co-operative Movement and Better Nutrition," which deals with standard definition of foodstuffs and the education of producers and consumers.

The report in question was based on information systematically collected from organizations of agricultural producers and of consumers on the special experience obtained by them and the measures they have used for educating producers and consumers; and for improving, defining, supervising and guaranteeing the quality of the food products which they put on the market to distribute. This enquiry was undertaken, not by the International Labour Office itself, but, at the request of the Office, by the International Committee for Inter-Co-operative Relations.

The information received as a result of the enquiry has been classified in two chapters, one relating to agricultural and the other to distributive co-operative organizataions.

In Chapter I, the measures which the agricultural co-operative organizations have adopted to improve, define, check and guarantee the quality of products which they put on the market are divided into the following sections and examined one by one: scientific researches and experiments, improvement of animal and vegetable species, improvement of the technique of production, training and education, encouragement of emulation, disciplinary action and supervision.

The facts collected in connection with the enquiry in question have made it possible to define the attitude of the Consumers' Co-operative Organization in respect of the problem of dietetics, and in Chapter II of the report this attitude is successively examined in its four principal aspects, namely: (1) care taken in the purchasing, warehousing and distribution of foodstuffs; (2) endeavour to produce themselves the greatest possible number of these products in the best conditions of hygiene; (3) educational action on their staff, members and on the public at large; and (4) collaboration with public authorities.

Statutory Holidays Declared under Minimum Wage Order in Manitoba.

Notice is given in the *Manitoba Gazette* of February 13, 1937 of an order under the Minimum Wage Act cancelling sub-section 4 of section 3 of Order No. 2 which dealt with statutory holidays and substituting the following section:

"Statutory holidays—No reduction shall be made from the Minimum Wage for statutory holidays. No employee shall be required to work on any of the following statutory holidays: New Years Day; Good Friday; May 24th (Empire Day); July 1st (Dominion Day); Civic Holiday; Labour Day; Thanksgiving Day; Christmas Day; Boxing Day (first working day after Christmas Day); unless a permit of exemption has been issued under section 6 hereof for such matters as taking care of emergent adjustments on Christmas Day, or unless the nature of such employee's work necessitates his or her employment to provide proper care and maintenance of the property."

ANNUAL REVIEW OF BUILDING PERMITS ISSUED IN CANADA DURING 1936

The Dominion Bureau of Statistics recently issued an Annual Review of Building Permits issued by 58 cities in Canada in 1936, with comparative data for the years 1920-1935. The report, containing charts and numerous tables, presents full information as to the extent of building activities throughout the Dominion, statistics being shown for building activities by provinces and cities and by types of buildings. Some paragraphs from the report are as follows:

The value of the building represented by the construction permits issued by 58 cities in Canada was rather lower in 1936 than in 1935, according to revised statements furnished by the municipal officials. The construction work authorized in these centres during the year under review was estimated to cost $41,325,693, compared with $46,560,623 in the preceding year; this was a decline of $5,234,930, or 11·2 p.c. However, as compared with 1934 and 1933 there were increases of 50·5 p.c. and 89·8 p.c., respectively. With these exceptions, the building represented by authorizations in 1936 was lower in value than in any other year since 1920. In this period of sixteen years, the value of the building permits taken out in 58 centres averaged $123,683,150, of which the 1936 authorization constituted only a third. The wholesale prices of building materials in 1936, though rather higher than in 1935 or preceding years since 1930, were decidedly lower than in any other year since 1920. The average index of wholesale prices of construction materials, as calculated in the Internal Trade Branch of the Bureau on the 1926 average as 100, stood at 85·4 in 1936, compared with 81·2 in 1935; the average for the years, 1920-1935, was 98.8. The cost of building labour in 1936 was very slightly higher than in the preceding year, according to the Labour Department's index of wage rates, based on the 1913 avarage as 100. This index was 160·8 last year, compared with 159·8 in 1935. During the seventeen years for which building permits figures are available for the 58 centres, the maximum wages index was 203·2 in 1930, while the minimum was in 1913, the basic year.

Effect of Housing and Improvement Plans: —A feature of the situation in 1936 was the decided increase in the value of the residential building for which permits were taken out in the 53 centres whose data are given in detail. Largely as a result of the impetus given to the construction and improvement of dwellings by the Dominion Housing Act and the Government Home Improvement Plan, the value of the authorizations for residential building in these cities amounted to $15,070,135 in 1936; this was 37·9 p.c. higher than the 1935 total of $10,927,318, and also compared favourably with the aggregate for any of the preceding three years.

The *MacLean Building Review* makes a monthly tabulation of the value of construction contracts awarded throughout the Dominion; during 1936, these totalled $162,588,000, compared with $160,305,000 in 1935, $125,811,500 in 1934, $97,289,800 in 1933, $132,872,400 in 1932, $315,482,000 in 1931, $456,999,600 in 1930, $576,651,800 in 1929, $472,032,600 in 1928, $418,951,600 in 1927, $372,947,900 in 1926 and $297,973,000 in 1925. There was, therefore, an increase of 1·4 p.c. in 1936 as compared with the preceding year, while the 1936 total was also higher than that for any other year since 1931.

A brief analysis of the data since 1920 shows a general similarity in the year-to-year trends of contracts awarded and building permits issued, the only exceptions in this period being in 1935 and 1936. In each of these years a slight increase over the preceding twelve months was shown in the former, accompanied by a decline in the value of the construction authorized in the co-operating cities.

The value of the building permits issued by the 58 centres in 1936 constituted 25·4 p.c. of the total value of construction contracts awarded throughout the Dominion, while in 1935, this proportion was 29·0 p.c. and in 1934, 21·8 p.c. The percentages in the last four years were lower than in any other of the seventeen for which figures for the 58 cities are available. In 1921, when these centres reported their highest proportion of total building work in the country, the percentage was 48·6, while the average ratio in the years, 1920-1936, was 40·3 p.c.

Cities in New Brunswick, Alberta and British Columbia showed increases, on the whole, in the value of the building permits issued as compared with 1935, but in the remaining provinces, the totals were smaller. The largest absolute decline in this comparison was in Ontario, where the 1936 authorizations were lower by $4,591,359, or 19·3 p.c. The greatest proportionate decrease was in Manitoba; in that province, permits were taken out for buildings valued at $1,559,940, as compared with $2,945,175 in 1935.

Some 53 cities furnished detailed statements showing that they had issued 4,051 permits for dwellings estimated to cost about

$15,070,135, and approximately 17,000 permits for other buildings at a proposed cost of over $19,064,000, while engineering projects valued at about $42,124 were also reported during 1936. The average estimated cost per dwelling was therefore approximately $3,720, while the average for other buildings was about $1,122. The former category includes houses and apartments, and in many but not all cases, repairs and alterations. Permits for garages usually constitute a large proportion of the total number of buildings other than residential, but in most cases have a low valuation. During 1935, 3,600 permits were granted for dwellings at a proposed cost of $10,927,318, an average of $3,030; some 14,000 permits were also issued for other buildings valued at $24,700,000, giving a mean of about $1,770 per building. There were also engineering projects undertaken, valued at about $506,000.

The beneficial effects of the Dominion Housing Act and the Government Home Improvement Plan are shown in an increase of 37·9 p.c. in the value of the residential building authorized by 53 cities during the year under review as compared with 1935. The 1936 total was also higher than in any other year since 1931.

The value of the residential building authorized in Charlottetown, Halifax, Sydney, Fredericton, Moncton, Montreal, Shawinigan Falls, Sherbrooke, Westmount, Brantford, Chatham, Fort William, Galt, Hamilton, Kingston, London, Niagara Falls, Oshawa, Owen Sound, Peterborough, Port Arthur, Stratford, St. Catharines, St. Thomas, Sault Ste. Marie, York and East York Townships, Welland, Windsor, St. Boniface, Moose Jaw, Regina, Saskatoon, Lethbridge, Medicine Hat, Nanaimo, New Westminster, Vancouver, North Vancouver and Victoria was higher in 1936 than in the preceding year.

EMPLOYMENT CONDITIONS IN CANADA AT END OF FEBRUARY, 1937

Reports of Superintendents of the Employment Service

EMPLOYMENT conditions at the end of February, 1937, were reported by the Superintendents of the Employment Service to be as follows:—

Farming was quiet in the Maritime Provinces, but weather conditions were favourable for logging, so that many men found work in the woods. Saw-mills also were busy, manufacturing long lumber and spruce laths. Fishing was rather poor, except at Saint John, where large catches of gaspereaux, cod and haddock were reported; scallop-draggers likewise were busy. Mines in the New Glasgow area operated from 4¾ to 6 days per week; those in Cape Breton and vicinity worked from 2 to 5 days, with some idleness reported. Steel plants at New Glasgow continued with approximately 65 per cent employed, working 5 days per week, while other manufacturing concerns, which were working full time, reported little change, conditions being about normal. With the exception of the City of Saint John, little building construction was in evidence, but all contracts under way were progressing favourably. Road construction at Chatham was somewhat less, but Government snow-ploughs were doing excellent work in keeping open over 600 miles of highway. Transportation was brisk, but trade was only fair. A number of requests was received for maids and charworkers and placements were made.

Quietness prevailed in farming in the Province of Quebec and there was no increase in logging placements, although considerable activity in this industry was recorded in the Quebec office zone. Hull stated that few offers of employment had been received from factories in that vicinity; at Montreal, however, metals, clothing and boot and shoe concerns were busier, but cigars, tobacco and rubber, quiet. Port Alfred reported the hiring of skilled men in fairly large numbers in connection with paper production and in Quebec City, manufacturing conditions, generally, were favourable, while paper mills at Three Rivers retained the gains made in recent months. Construction contracts throughout the province were being carried out and though lessened activity was noted at Montreal, through the completion of several relief projects, about 1,300 men there were still employed. Retail trade compared favourably with that of last year and placements in domestic service, though somewhat below those of January, were fairly large.

A fair demand for experienced farm-hands was recorded in Ontario, with wages slightly higher. Inquiries regarding spring work were also coming in rapidly. Bush operations were impeded by deep snow, but placements of pulp cutters, tie-makers, teamsters, loaders and general bush-hands were made. All producing mines were running at full capacity and non-producers were marking time until fine weather, when surface work could be done at much smaller expense. A fair supply of well experienced miners and a large number of

inexperienced men were seeking employment in this industry. Manufacturing in general, continued to show improvement, especially in the iron and steel group and in textiles, although little additional help was being taken on. Some concerns, however, were in their "off season," but still were maintaining sizable staffs. Building construction was quiet, the chief work in this line being confined to alteration and renovation jobs, road work was also being carried on. Trade showed a little change. The demand remained steady for all classes of household help, charwomen, hotel and restaurant workers.

Few requests for farm-hands were listed in the Prairie Provinces, but numerous inquiries were received from both farmers and farm-hands regarding spring wages and where reasonable pay was offered, no difficulty was found in obtaining experienced men. Logging was fairly active. Mines, for the most part, were gradually reducing their crews, although those at Edmonton and Lethbridge were still busy. Manufacturing was active at Winnipeg, fair at Edmonton and quiet at Medicine Hat. Considerable activity was recorded in real estate in Winnipeg and building permits thus far this year were much ahead of those of 1936, but, elsewhere, building construction was quiet and relief projects continued. Snow shovelling also afforded some employment. Trade showed little change. More calls were received for domestic service, but as many applicants preferred city work, country positions were difficult to fill.

A fair number of orders was listed for farm-hands in British Columbia, although snow on the land still proved a hindrance to outdoor work. Pruning, also, had been delayed, owing to the weather. At Penticton, arrangements had been made for planting one thousand acres of peas in the northern part of the Okanagan Valley. Saw and shingle mills were running at full capacity, but other woods work was handicapped by the great depth of snow Coal mines at Nanaimo and vicinity were working full time, with additional men having been taken on recently. Gold properties also in various localities were retaining full crews and new claims were being staked. Factories at Nelson were busy. Building construction showed slight improvement, though still far from normal. Snow slides on railways and snow ploughing and clearance of highways afforded employment for numerous men. At Vancouver, a start was being made to relay the crews from the Government forestry and road camps, those men having earned a certain amount of money being recalled and their places filled by others. This will entail a movement of about 5,000 men. Dry docks and shipyards at Prince Rupert were busy, but quiet at Victoria, while the water front was active at New Westminster and Prince Rupert, but slack at Vancouver. Trade showed little change. Experienced domestics continued scarce in the Women's Division; there was, however, a large registration of young girls from 16 to 18 years of age, for whom full positions were available.

"The Brass and Copper Products Industry in Canada, 1935" is the title of a report issued recently by the Dominion Bureau of Statistics. The report covers the operations of brass foundries and other factories in Canada engaged chiefly in the manufacture of commodities (other than electrical supplies) from brass, bronze and copper. Seventy-nine foundries and 45 fabricating plants reported under this industry in 1935 and production was valued at $19,187,022 at factory prices; compared with outputs worth $19,309,314 in 1934 and $13,150,559 in 1933. The record output value for the industry was $36,115,581, attained in 1929. The number of employees in 1935 employed by these establishments was 4,246, compared with 3,932 in 1934. Salaries and wages aggregated $4,649,912 in 1935 as against 4,187,652 in 1934.

Regulations 60 and 61 of the Workmen's Compensation Board of Saskatchewan, which were recently approved by Order in Council and came into effect March 1, 1937, amend Regulation 32, approved March 21, 1930. Regulation 60 brings wholesale establishments entirely within the scope of Part I of the Act (providing for collective liability), whereas formerly only the shipping, receiving, packing and delivery departments of such establishments were included. Regulation 61 brings the erection of bill boards and bill posting under Part I.

In replying to a question asked in the House of Commons, Hon. C. D. Howe, Minister of Transport, gave information respecting wages and deductions for board, bedding and medical services of men who were employed by the railways on deferred maintenance work (Labour Gazette, July, 1936, page 608) during the summer of 1936. Under the scheme, the Canadian National Railways employed 7,987 men, who received $1,300,000 in wages, and the Canadian Pacific Railway employed 8,344 men, who received $1,326,026.17 in wages. The Dominion Government reimbursed the C.N.R. an amount of $1,300,000 and the C.P.R. $1,310,237.93.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN JANUARY, 1937

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on February 1 was 9,996, the employees on their payrolls numbering 987,719 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for January was 1,825, having an aggregate membership of 188,690 persons, 14·5 per cent of whom were without employment on February 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 66 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

(1) The Employment Situation At The Beginning Of February, 1937, As Reported By Employers.

Employment at February 1, 1937, showed a slight advance, according to data tabulated by the Dominion Bureau of Statistics from 9,996 firms whose payrolls aggregated 987,719 persons, compared with 985,644 in the preceding month. This increase of 2,075 workers since January 1, was smaller than the average gain indicated at February 1 in preceding years of the record, which commences with 1921, so that the index, after correction for seasonal influences, showed a decrease of slightly over one point, from 111·1 at January 1 to 109·9 at the beginning of February. However, this seasonally adjusted index was higher than in any month of 1936, and with the exception of January 1, 1937, was also higher than at any earlier date since the autumn of 1930.

An analysis of the returns by industries shows that the most pronounced recovery at the date under review was that of a seasonal character in manufacturing, in which there was an increase of 14,550 workers, or 2·8 per cent as compared with January 1, 1937. This gain, like the year-end loss which it succeeds, was smaller than the average indicated at the beginning of February in the sixteen preceding years for which data are available, but it is important to note that it resulted in the re-employment of a larger proportion of those laid off at January 1 than has been usual in the experience of the years since 1920, the year-end decline also having been less than normal. Within the group of factory employment, the iron and steel, textile and leather industries showed the greatest gains.

Among the non-manufacturing industries, logging, metallic ore mining and railway construction and maintenance also recorded heightened activity; the increased employment in the last-named was chiefly caused by snow-clearing operations. Declines were indicated, on the whole, in the remaining groups. Communications, transportation, building and highway construction, services and trade reported reductions in personnel, which in many cases, were of a seasonal character.

A brief review of the situation as at February 1, 1936, shows that the 9,394 firms from whom statistics had been received had reported an aggregate payroll of 927,006, as compared with 933,294 in the preceding month. The index then, however, was 5·7 points lower than at February 1, 1937, when it stood at 104·1.

The crude index of employment (average 1926=100) rose slightly from 103·8 at January 1, 1937, to 104·1 at the beginning of February, as already stated, while at February 1 in other years for which data are available, the unadjusted index was as follows: 1936, 98·4; 1935, 94·6; 1934, 91·4; 1933, 77·0; 1932, 89·7; 1931, 100·7; 1930, 111·6; 1929, 110·5; 1928, 102·0; 1927, 96·6; 1926, 91·8; 1925, 87·1; 1924, 91·7; 1923, 90·6; 1922, 79·9 and 1921, 91·2.

Employment By Economic Areas.

Improvement was recorded in Quebec and Ontario, while the movement was unfavourable in the Maritime and Prairie Provinces and British Columbia. Employment in all but the Western Provinces was more active than at the beginning of February of last year, being also in all five economic areas at a higher level than at February 1 in any of the years, 1932-1935.

latter group, vegetable food and electric current plants showed reduced activity, but lumber and iron and steel works reported considerably increased staffs. A much larger loss, on the whole, had been recorded at February 1 of last year, when 653 firms had reported 73,057 employees, or 4,135 fewer than at January 1, 1936. The index then was lower than at the date under review, standing

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

Maritime Provinces.—The trend of employment in the Maritime Provinces has very frequently been downward at the beginning of February in the sixteen preceding years for which data are available, the average loss in employment being over one per cent. At February 1 of the present year, activity showed a decline that rather exceeded the average, 1,511 persons having been laid off since January 1 by the 689 reporting firms, whose payrolls aggregated 77,471 workers; this was a reduction of 1·9 per cent as compared with the beginning of January. Logging, coal-mining, communications, retail trade and construction reported curtailment, that in the last-named being on a large scale; on the other hand, improvement took place in transportation and manufacturing. Within the

at 102.2, as compared with 107.5 at February 1, 1937.

Quebec.—Employment in Quebec showed a substantial increase at the date under review, when the working forces of the 2,370 co-operating employers aggregated 295,867, as against 288,851 at January 1, 1937. There were large gains, on the whole, in manufacturing, notably in leather, textile and iron and steel plants, while food, pulp and paper and clay, glass and stone works were slacker. Transportation, services and trade also showed reduced activity, but logging, mining and construction afforded more employment. The index at February 1, 1937, stood at 106·7, as compared with 95·2 at the same date of last year, when a small decline had occurred; the 2,225 firms making returns for the

beginning of February, 1936, had reported a staff of 263,046 persons, or 914 fewer than in the preceding month. In the experience of other years since 1920, employment in Quebec has usually advanced at February 1, but the gain indicated in the month under review considerably exceeds the average.

Ontario.—A moderate increase, on the whole, was shown in Ontario, where decided recovery in manufacturing, particularly in iron and steel, textile, leather and vegetable food factories, and in mining, more than offset reductions in logging, transportation, construction, services and retail trade. Data were received from 4,457 firms employing 421,056 persons at the date under review, as compared with 417,364 at the beginning of January. This gain of 3,692 workers was smaller than the increase that has been indicated, on the average, between January 1 and February 1 in the years, 1921-1936. The movement had been downward at the beginning of February last year, when the 4,162 employers making returns had reported an aggregate staff of 392,758. The index stood at 108·4 at February 1, 1937, as compared with 102·4 at the same date of last winter.

Prairie Provinces.—Employment in the Prairie Provinces has, with few exceptions, declined at February 1 in the sixteen preceding years for which records are available. The tendency was also unfavourable at the date under review, when the 1,445 co-operating employers reduced their payrolls by 3,595 persons, to 116,160 at February 1. Manufacturing showed an advance, marked improvement in iron and steel plants being partly offset by losses in food factories. Logging, metallic ore mining and steam railway operation and construction afforded more employment, but coal-mining, communications, local transportation, highway construction and maintenance, services and retail trade reported curtailment. The general contraction in industrial activity at February 1, 1937, was greater than the average indicated at that date in the years since 1920, also exceeding the decrease noted at the beginning of February in 1936; the 1,374 employers then furnishing returns had reduced their working forces to 118,550 from 120,154 at January 1,

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

(AVERAGE CALENDAR YEAR 1926=100)

—	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
Feb. 1, 1921	91·2	108·1	86·2	93·8	93·0	77·4
Feb. 1, 1922	79·9	88·2	71·1	84·7	82·4	74·8
Feb. 1, 1923	90·6	101·4	83·6	95·9	90·9	78·4

Oct. 1	110·1	117·9	106·0	112·6	108·6	108·1
Nov 1	111·0	119·4	110·3	112·8	106·0	105·4
Dec. 1	110·1	115·3	112·6	112·9	98·6	101·5
Jan. 1, 1937	103·8	109·5	104·0	107·5	94·2	95·4
Feb. 1, 1937	104·1	107·5	106·7	108·4	91·4	91·3
Relative Weight of Employment by Economic Areas as at Feb. 1, 1937	100·0	7·8	30·0	42·6	11·8	7·8

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns for the date under review.

1936. The index stood at 91·4 at the date under review, compared with 93·7 at February 1 of last year, but was higher than at the same date in 1935, 1934 or 1933.

British Columbia.—There was a decrease in employment in British Columbia at February 1, in which most of the main industrial divisions shared; logging, mining, construction and maintenance, services and manufacturing reported the greatest losses. In the last-named, food and lumber factories recorded declines, while the tendency was favourable in pulp and paper and metal works. The general curtailment in staffs compares unfavourably with the small increase that, on the average, has been indicated from January 1 to February 1 in the last sixteen years. The working forces of the 1,035 reporting firms aggregated 77,165, a loss of 3,527 employees as compared with their payrolls in the preceding month. Heightened activity had been noted between January 1 and February 1 in 1936, when the labour forces of the 980 co-operating establishments had been enlarged by 1,352 persons to 79,595 at the latter date. The index, at 94·1, was then rather higher than at February 1 of the present year, when it was 91·3.

Index numbers of employment by economic areas are given in Table 1.

Employment By Cities.

The trend of employment was downward in Quebec City, Toronto, Ottawa, Winnipeg and Vancouver, while in Montreal, Hamilton and Windsor the tendency was favourable.

Montreal.—Manufactures showed considerable recovery on the whole, notably in the footwear, textile and iron and steel groups, while tobacco and beverage, food and clay, glass and stone factories reported reduced activity. Transportation, construction and maintenance and trade also afforded less employment. Data were received from 1,368 firms employing 137,962 workers, or 2,235 more than at January 1. Industrial activity in Montreal has usually advanced between January 1 and February 1 in the experience of the years since 1923, when statistics for that city were first segregated, but the improvement recorded in the present report exceeds the average gain at February 1 in the period, 1923-1936. The index at the latest date stood at 91·8, or over four points higher than at the beginning of February in 1936; the 1,298 co-

TABLE II.—INDEX NUMBERS OF EMPLOYMENT BY PRINCIPAL CITIES

(AVERAGE CALENDAR YEAR 1926=100)

—	Montreal	Quebec	Toronto	Ottawa	Hamilton	Windsor	Winnipeg	Vancouver

Relative Weight of Employment by Cities as at Feb. 1, 1937	14·0	1·2	12·8	1·3	3·3	2·0	3·9	3·4

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated city, to the total number of all employees reported in Canada by the firms making returns for the date under review.

operating firms had then employed 131,723 men and women, as against 130,014 in the preceding month.

Quebec.—Returns tabulated from 175 employers in Quebec City showed that they had reduced their staffs from 12,287 at January 1 to 12,243 persons at February 1, the index falling slightly from 92·0 at the former to 91·7 at the date under review. Manufacturing afforded more employment, and transportation was also busier. Trade, services and construction, on the other hand, were seasonally dull. The index was practically the same as at the corresponding date of last year, when a larger decline had been noted.

Toronto.—Heavy seasonal losses took place in retail trade, while manufacturing showed improvement, mainly in vegetable food, pulp and paper, textile and iron and steel works. On the whole, there was a decrease of 1,904 in the number employed by the 1,519 co-operating firms, who had 126,536 employees. This reduction was decidedly smaller than that indicated at February 1 of a year ago, when the index of employment was 5·5 points lower than that of 101·9 at the date under review. The 1,415 employers from whom statistics were received at February 1, 1936, had an aggregate payroll of 117,547.

Ottawa.—There was seasonal curtailment in retail trade and construction, and manufacturing was also rather slacker. Two hundred and one establishments in Ottawa reported 13,110 workers, or 509 fewer than at January 1. The index of employment was fractionally lower than at the beginning of February, 1936, when a similar decline, on the whole, had been noted.

Hamilton.—Employment in Hamilton showed an advance, mainly in the manufacturing group, in which improvement was indicated by textile, iron and steel and other plants. There were, however, small losses of a seasonal character in trade and construction. Statistics were tabulated from 289 firms employing 32,731 persons, compared with 31,879 in the preceding month. The index, at 101·7, was nearly five points higher than at February 1 of a year ago; a smaller gain had then occurred.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

(AVERAGE CALENDAR YEAR 1926=100)

—	All industries	Manufacturing	Logging	Mining	Communications	Transportation	Construction	Services	Trade

Relative Weight of Employment by Industries as at Feb. 1, 1937	100·0	54·0	7·1	6·9	2·2	9·8	6·8	2·6	10·6

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated industry, to the total number of all employees reported in Canada by the firms making returns for the date under review.

Windsor.—Considerable recovery was indicated in automobile factories, while other industries showed little general change. The 175 co-operating firms employed 19,821 workers, as against 18,722 at January 1. The situation was decidedly better than at the same date in 1936, when advances on a smaller scale had been made. The index at February 1, 1936, had stood at 120·0, compared with 145·2 at the beginning of February in the present year.

Winnipeg.—The number employed in Winnipeg showed a contraction, mainly in transportation, construction and retail trade, while iron and steel and other factories reported improvement. Returns were compiled from 479 firms with 38,308 employees, compared with 39,540 in the preceding month. Employment was rather slacker than at February 1 of last year, when less extensive curtailment had been indicated by the 459 co-operating establishments, employing 39,033 persons, as compared with 39,315 at the beginning of January, 1936.

Vancouver.—Manufacturing on the whole reported moderately reduced employment, particularly in the lumber group, while vegetable food factories were more active; services, construction and retail trade also released employees. On the other hand, transportation showed improvement. The 438 reporting firms employed 33,748 persons, as against 33,938 at January 1. The index, at 104·7, was nearly seven points higher than at the same date in 1936, when 424 employers had reported 31,320 employees, as compared with 31,186 in the preceding month.

Index numbers of employment by cities are given in Table 2.

Employment By Industries.

Manufacturing.—Improvement was noted in factory employment at February 1, 1937, when 5,811 co-operating manufacturers reported 533,770 operatives, compared with 519,220 in the preceding month. This increase of 14,550 persons raised the unadjusted index from

TABLE IV.— INDEX NUMBERS OF EMPLOYMENT BY MANUFACTURING INDUSTRIES (AVERAGE 1926=100).

Industries	[1]Relative Weight	Feb. 1, 1937	Jan. 1, 1937	Feb. 1, 1936	Feb. 1, 1935	Feb. 1, 1934	Feb. 1, 1933	Feb. 1, 1932

[1] The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns at the date under review.

102·4 at January 1 to 105·3 at the beginning of February. The seasionally-adjusted index was 109·3 at February 1, 1937, compared with 110·9 in the preceding month. As already stated, both the seasonal curtailment at the beginning of January and the recovery at the date under review, were on a scale less than the average in the years, 1921-1936, but the gain at February 1 provided work for a larger-than-average proportion of the number (23,202 men and women) who had been released by the 5,827 factories reporting at January 1, 1937.

The 5,568 manufacturers furnishing data for February 1 of last year had reported 496,150 employees, as compared with 487,172 at the opening of 1936. The recovery then indicated had thus been on a much smaller scale than at the latest date, when the index was 6·9 per cent higher than at the beginning of February, 1936.

The February 1, 1937, crude index of employment in manufacturing stood at 105·3, compared with 102·4 in the preceding month, while at the beginning of February in the last sixteen years it has been as follows:—1936, 98·5; 1935, 90·1; 1934, 84·2; 1933, 75·0; 1932, 85·9; 1931, 96·1; 1930, 110·2; 1929, 112·8; 1928, 102·3; 1927, 98·2; 1926, 93·0; 1925, 85·8; 1924, 91·9; 1923, 92·0; 1922, 79·0 and 1921, 91·8.

The most pronounced improvement at the date under review over January 1, 1937, occurred in iron and steel plants, in which 6,300 additional employees were reported by the firms furnishing data; while this gain was smaller than the average increase between January 1 and February 1 in the years since 1920, it succeeded an advance at the end of the year that was contra-seasonal. Activity in this important group of industries was greater at February 1 than in any month of 1936, or indeed, than at any period since the spring of 1931. There were also substantial gains in leather and textile factories, with smaller additions to staffs in the lumber, musical instrument, pulp and paper, rubber, electrical appliance and non-ferrous metal industries. On the other hand, food, clay, glass and stone and electric current plants showed curtailment.

Animal Products—Edible.—There was a decrease in employment in this group at the beginning of February, exceeding that noted at the corresponding date last year; however, the index then, at 108·5, was ten points lower than at the date under review. Statements were tabulated from 283 firms employing 22,873 workers, as compared with 23,445 in the preceding month. Dairies, meat and fish-preserving plants reported losses.

Leather and Products.—Employment in boot and shoe factories very substantially increased, while other branches of the leather industry showed moderate advances. A combined working force of 22,103 persons was reported by the 301 co-operating manufacturers, who had 19,968 employees at the beginning of January. Most of the advance took place in Quebec and Ontario. Activity was greater than at February of a year ago, the index at the latest date standing at 108·6, compared with 104·5 at the same date in 1936.

Lumber and Products.—Little general change was indicated in sawmills, while furniture factories were busier; 292 workers were taken on by the 844 firms making returns, who had 37,767 on their staffs. The increase was much smaller than that registered at the beginning of February, 1936, but the index of employment then was lower by over five points. There were gains in the Maritime Provinces and Ontario, while unfavourable weather affected the situation in British Columbia.

Musical Instruments.—Thirty-five manufacturers of musical instruments (not including radios) reported considerably increased employment at February 1, as compared with the preceding month; their staffs numbered 1,273 persons, as compared with 989 at January 1. The index stood at 44·6, as against 41·9 at the same date of last year, when a reduction had been indicated.

Plant Products, Edible.—There was a slight decline in the vegetable food group, according to the 476 reporting establishments, which employed 29,494 workers, compared with 29,556 in the preceding month. Sugar and syrup factories showed losses, which were partly offset by additions to staffs in the cereal and biscuit and bakery divisions. A larger decrease had been indicated at February 1 of last year, when the index stood at 96·4, as compared with 101·2 at the date under review.

Pulp and Paper.—Pulp and paper mills showed little change on the whole, while paper product and printing and publishing factories reported moderate gains. The general index, at 102·5, was over six points higher than at February 1, 1936, when curtailment had been recorded. Data were received from 607 employers of 62,468 workers, as against 62,023 at the beginning of January, 1937; improvement in Ontario and the Western Provinces more than offset declines in the Maritime Provinces and Quebec.

Rubber Products.—The trend of employment in rubber factories was upward, 53 of these enlarging their payrolls from 12,211 persons

at January 1 to 12,421 at February 1. The index, at 97·5, was 3½ points higher than at the same date in 1936, when a rather larger gain had been indicated.

Textile Products.—The advance in employment in the co-operating factories was much more pronounced than that noted at February 1, 1936, and activity was then at a lower level than at the date under review. Cotton, silk, headwear, hosiery and knitting, garment and personal furnishing establishments registered important increases in personnel; the working forces of the 1,047 co-operating firms aggregated 103,912 persons at February 1, 1937, as compared with 98,608 in their last report. Ontario and Quebec showed marked improvement.

Tobacco, Distilled and Malt Liquors.—No general change in employment was noted in this division, gains in tobacco works offsetting losses in beverage factories. Returns for the beginning of February were tabulated from 187 manufacturers with 18,958 employees, or practically the same number as in their last report. Employment was rather brisker than at February 1 of a year ago, when many workers had been laid off by the co-operating establishments.

Chemicals and Allied Products.—Statements were compiled from 200 firms in this group, whose staffs aggregated 11,599, as compared with 11,663 at the beginning of January. Employment was more active than last winter; a slight shrinkage had also been noted at February 1, 1936, as compared with the preceding month.

Clay, Glass and Stone Products.—A downward movement was recorded in this group at the date under review, according to 203 manufacturers, whose labour forces included 8,153 workers, or 177 fewer than in the preceding month. Employment generally was brisker than at February 1, 1936, when curtailment on a larger scale had been indicated.

Electric Current.—A moderate falling-off was noted in electric current plants at the beginning of February; the 96 co-operating manufacturers reported 14,181 employees, compared with 14,342 at January 1. Activity was slightly greater than at February 1 of last year, although a smaller decline had then taken place.

Electrical Appliances.—Employment in electrical appliance works showed improvement from January 1, while the index was nearly ten points higher than at February 1 of a year ago, when a reduction had been indicated. Data were received from 126 establishments employing 17,186 operatives, as against 16,812 at January 1, 1937.

Iron and Steel Products.—There were important increases in employment in iron and steel factories, although the gains were smaller than the average at February 1 in the years since 1920. The recovery was most noteworthy in the railway car and locomotive, automobile and other vehicle, crude, rolled and forged, agricultural implement, machinery, structural iron and steel and heating appliance divisions. The improvement in Quebec and Ontario was most pronounced, but the trend was generally upward. Statistics were tabulated from 861 firms, whose staffs stood at 126,495, compared with 120,195 at January 1. The index, at 97·2, was over seven points higher than at the corresponding date of last year, when slightly larger advances had been indicated.

Non-ferrous Metal Products.—Lead, tin, zinc, copper and other works in this division recorded heightened activity. The gain in the group as a whole was not quite so large as that noted at February 1, 1936, when the index, at 123·2, was many points lower than at the date under review (viz., 143·4). The working force of the 170 co-operating manufacturers included 22,854 employees, or 147 more than at the beginning of January, 1937. Increases took place in Quebec and British Columbia, while the tendency in Ontario was downward.

Mineral Products.—One hundred and forty-two establishments in the mineral products group reported 14,013 workers, or practically the same number as in the preceding month. Employment in this division as a whole was better than at mid-winter in 1936, when a decline had been indicated.

Logging

Moderate improvement was recorded in logging, in which employment was at a higher level than at February 1, 1936. Statements were received from 361 operators employing 69,898 workers, as against 69,493 at January 1. The trend of employment was favourable in Quebec and the Prairie Provinces, but there were losses in the Maritime Provinces, Ontario and British Columbia.

Mining.

Metallic ore mining showed heightened activity, while the extraction of coal and other non-metallic minerals afforded less employment. On the whole, there was an increase of 882 persons in the forces of the operators furnishing returns, who numbered 399. Their staffs aggregated 68,128 employees, of whom

25,790 were engaged in the mining of coal, 34,695 in metallic ores and 7,643 in non-metallic minerals, other than coal. A decline had been indicated in the group as a whole at February 1, 1936, when the index was 18 points lower than at the date under review.

Communications.

The working force of the companies and branches reporting stood at 21,145 persons, compared with 21,363 in the preceding month, most of the reduction taking place on telephones. The number employed was rather greater than at the same date in 1936, when a larger contraction had been recorded.

Transportation.

Street Railways and Cartage.—There was a downward trend in employment in this division at February 1, which compares unfavourably with the increase occurring at the same date in 1936; however, the index then was over two points lower. The 237 co-operating employers had 26,003 persons on their pay-rolls, or 163 fewer than in the preceding month. Most of the decrease took place in the Prairie Provinces.

Steam Railway.—No general change was noted at the beginning of February, when 58,126 employees were reported on the operating staffs of the steam railways. A moderate decline had been indicated at February 1 of last year, and the index then stood at 71·6, as compared with 73·1 at the date under review.

Shipping and Stevedoring.—Employment in water transportation showed a further contraction; 109 employers released 677 workers from their pay-rolls, bringing them to 12,741 at February 1 of the present year. The index was several points higher than at the same date in 1936, when a minor gain had been recorded.

Construction And Maintenance.

Building.—Employment in building construction declined at February 1; the index, at 33·8, was many points lower than at the beginning of February a year ago, when a smaller reduction had been reported. Statistics were received from 725 contractors, with 13,822 persons in their employ at the date under review, as against 16,188 at January 1, 1937. The tendency was unfavourable in all five economic areas.

Highway.—The number of persons reported by 316 employers in the highway construction and maintenance group was 31,110, or 3,682 fewer than in the preceding month. Employment in this division was less than at February 1, 1936; a contraction had then also been indicated.

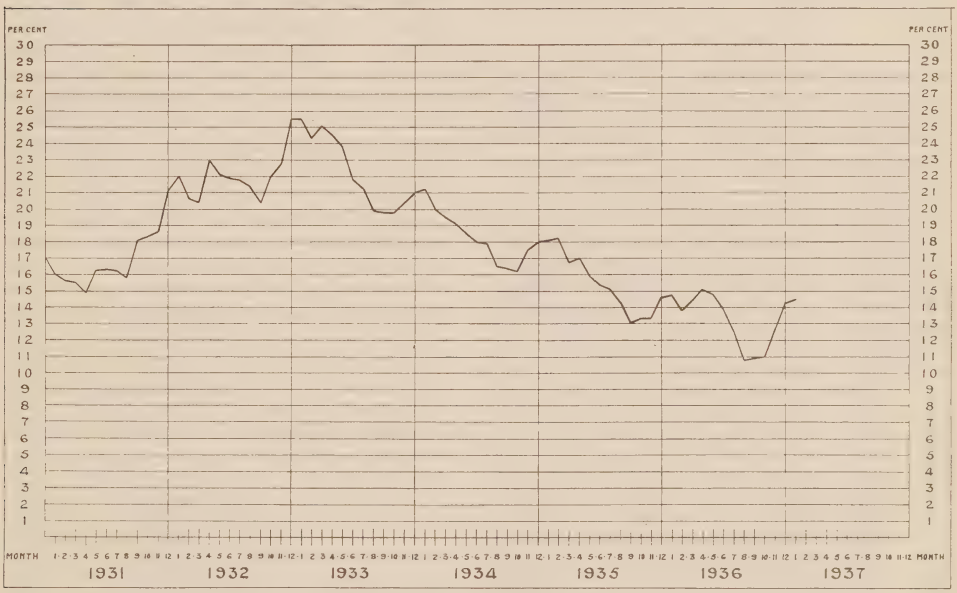
Railway.—Considerable additions to staffs were noted in railway construction and maintenance, due to track-clearance operations. Larger gains had been recorded at the same date in 1936, when the index was several points higher. Statements were tabulated from 36 employers in this group, with 22,560 persons on their payrolls, as compared with 21,232 in the last report. Increases in personnel were registered in Quebec, Ontario and the Prairie Provinces.

Services.

The service group was not so active as in the preceding month; 472 establishments had 25,962 employees, or 1,241 fewer than at January 1, 1937. Most of the loss occurred in hotel and restaurant employment. The index, at 119·1, was nearly three points higher than at February 1 of last year, when smaller declines had been noted in this industrial division.

Trade.

Following the heightened activity resulting from the Christmas and holiday season, there was a substantial falling-off in the number employed in trade at February 1. The index of employment stood at 128·4, compared with 121·6 at the same date of last year. The 1,343 trading establishments furnishing data reduced their payrolls from 11,207 employees at January 1, 1937, to 104,454 at the beginning of February. There were marked decreases in retail stores, while wholesale establishments showed a slight decline. The general curtailment was on a smaller scale than that reported at the beginning of February in 1936.



TABLES

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area, or industry, is of the total number of employees reported in Canada, by the firms making returns at February 1, 1937.

(2) Unemployment in Trade Unions at the Close of January, 1937

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged at work other than their own trades or who are idle on account of illness are not considered as unemployed. Unions which are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

The local trade union situation at the close of January remained much the same as in the preceding month, what nominal variation was apparent being in an unfavourable direction. Reporting for January were 1,825 labour organizations with an aggregate of 188,690 members, 27,379 of whom, or 14·5 per cent, were out of work on the last day of the month, contrasted with a percentage of 14·3 in December. When compared with the returns for January, 1936, the tendency was toward heightened activity during the month reviewed, though the change was but fractional, unemployment for that month standing at 14·8 per cent. British Columbia unions reflected a drop of activity of nearly 4 per cent from December, which was rather general throughout the various trades and industries, and in Alberta curtailment of about 3 per cent was evident, the coal mines and manufacturing industries particularly contributing to the decline. Recessions of lesser degree occured among Quebec unions while in Nova Scotia and New Brunswick employment was but slightly retarded. Improvement of a largely off-setting nature however, was shown among Ontario, Manitoba and Saskatchewan members, though the gains were not especially marked in any one province. In comparison with the returns for January, 1936 rather noteworthy increases in activity prevailed for Manitoba members, and in Alberta, Saskatchewan and Ontario, employment advancement on a more moderate scale was shown. The trend in New Brunswick was also upward, though the change was less than 1 per cent, of the recessions, the most important was noted in Quebec, while in Nova Scotia and British Columbia minor contractions were evident.

Each month the records of unemployment among local trade union members in the largest city in each province with the exception of Prince Edward Island, are tabulated separately. Halifax, Montreal and Vancouver members during January showed considerable slowing up in activity from December, and in

Saint John moderate losses were indicated. The trend in Regina and Edmonton was toward lessened employment, though the changes were but nominal. Toronto members, on the contrary, registered noteworthy increases in work afforded, and in Winnipeg, advances of somewhat lesser proportions were reflected. When contrasted with the returns for January, 1936, conditions for Winnipeg, Regina and Edmonton members were moderately improved during the month surveyed, and in Toronto and Saint John, the employment movement was slightly better. Montreal unions, however, indicated a rather marked falling off in available employment, and in Halifax and Vancouver, the situation also declined.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919	3·1	2·0	3·4	2·7	2·1	3·2	2·0	7·9	3·4
Average 1920	1·8	2·0	7·2	3·4	3·1	3·2	2·8	11·2	4·9
Average 1921	11·3	8·5	16·6	9·7	8·5	7·8	7·8	23·5	12·7
Average 1922	7·1	4·3	8·6	5·0	8·9	5·4	6·1	12·4	7·1

May, 1936	7·4	8·7	19·6	15·0	9·9	7·7	15·7	11·6	14·8
June, 1936	6·7	7·8	19·0	13·3	8·4	6·4	17·2	10·5	13·9
July, 1936	6·2	6·8	19·2	9·9	8·3	7·4	14·4	9·7	12·5
Aug., 1936	6·8	7·7	16·7	8·4	7·8	7·1	10·7	8·3	10·8
Sept., 1936	6·2	8·0	17·1	9·0	8·0	5·8	9·5	8·5	10·9
Oct., 1936	5·2	8·0	18·3	8·6	8·2	8·2	5·9	9·8	11·0
Nov., 1936	5·3	7·8	19·0	11·9	10·0	10·6	6·8	11·3	12·7
Dec., 1936	6·8	6·2	20·9	13·8	10·9	12·8	6·4	12·7	14·3
Jan., 1937	8·2	6·3	22·9	11·9	8·4	11·4	9·1	16·4	14·5

From the chart, which appears with this article and traces the course of unemployment by months, from January, 1931, to date, it will be noticed that the level of the curve at the close of January, 1937, has varied slightly from either the preceding month or January, 1936, unemployment remaining in much the same volume during the three months under comparison. The tendency, however, when contrasted with December conditions was nominally upward in an unfavourable direction, though when compared with January of last year fractional improvement was manifest by the projection of the curve.

The manufacturing industries, with 511 unions reporting during January a total of 64,750 members, showed that 10,018, or a percentage of 15·5 were idle on the last day of the month compared with percentages of 16·8 in December, 1936, and 15·4 in January, 1936. Garment and leather workers, and metal polishers, were substantially better engaged than in December, and conditions were slightly improved for hat, cap and glove workers, paper makers, and textile and carpet workers. Fur and glass workers were, however, decidely less active than in December and among cigar and tobacco, and wood workers, and bakers and confectioners, and general labourers, recessions on a much smaller scale occurred. Among jewellery, iron and steel, and brewery workers, printing tradesmen, and meat cutters and butchers, employment was but fractionally retarded. A much higher level of activity than in January, 1936, was indicated by textile and carpet, and wood workers, and metal polishers, while expansion of considerally lesser degree was evident among cigar and tobacco, jewellery, brewery, iron and steel and leather workers, meat cutters and butchers, printing tradesmen, bakers and confectioners, and paper makers. Glass workers, general labourers, and hat, cap and glove workers, were much slacker than in January, 1936, and among garment and fur workers, conditions were considerably less favourable.

Employment for coal miners eased off slightly during January from the preceding month, the 48 unions making returns, with a combined membership of 17,724 persons, showing that 1,249, or 7·0 per cent, were idle on the last day of the month, compared with 4·9 per cent in December. The curtailment evident from December was most noticeable in the province of Alberta, though in Nova Scotia, also, contributing declines on a smaller scale, were noted. In British Columbia activity tended

but slightly upward. The situation in coal mining, as a whole, showed a small measure of improvement from January, 1936, when unemployment stood at 8·9 per cent. In this comparison, Alberta unions indicated decided employment revival during the month reviewed, and British Columbia unions small increases in work afforded, while in Nova Scotia nominal recessions only were apparent.

The building and construction trades were somewhat quieter during January, than in either the previous month, or January, 1936, as was evident from the reports compiled from 198 associations, with 18,837 members. Of these, 8,231, or a percentage of 43·7, were out of work, in contrast with 40·0 per cent in December, 1936, and 41·5 per cent in January, 1936. Contractions in employment from December, involving the greatest number of members, were recorded by bricklayrs, masons and plasterers, and carpenters and joiners. Bridge and structural iron workers, reported a large percentage drop in activity from December, which, however, affected few workers, as their membership was small. Noteworthy recessions were also apparent among granite and stone cutters, and steam shovelmen, while activity for electrical workers was very slightly restricted. Plumbers and steamfitters, and tile layers, lathers and roofers, on the other hand, recorded moderate improvement, and among painters, decorators and paper hangers, and hod-carriers and building labourers, there was a very slight rise in work accorded. Heavy increases in unemployment were registered by carpenters and joiners, from January, 1936, and among tile layers, lathers and roofers, and bridge and structural iron workers, pronounced recessions were evident. Conditions were, however, considerably better for granite and stonecutters, and among steam shovelmen marked advances were noted. Electrical workers, and painters, decorators and paper hangers, indicated expansion of lesser degree, and the situation was also more favourable for bricklayers, masons and plasterers, plumbers and steamfitters, and hod-carriers, and building labourers.

There was little variation in the level of activity in the transportation industries during January from the preceding month, though the tendency was toward increased employment, the percentage of idleness standing at 8·2, in comparison with 8·6 per cent in December. An upward movement of employment was also apparent from January, 1936, when 9·2 per cent of the members reported were idle. The percentage for January, this year, was based on the returns tabulated from 815 assocations, with a total of 58,748 members, 4,791 of whom were without work at the close of the month. The steam railway division, which involved about 80 per cent of the entire membership reported in the transportation industries, showed a fractional rise in available work over both December and January, 1936, and among street and electric railway employees the tendency was also more favourable in each comparison, though the changes were merely nominal. Navigation workers, however, were decidedly quieter than in December and pronounced increases in unemployment were reflected from January, 1936. Among teamsters and chauffeurs, the employment trend was toward lessened activity when compared with December, but slightly improved conditions were shown from January, 1936.

Retail shop clerks during January maintained a practically unchanged situation from December, 1936, according to the reports forwarded by 4 associations, with 1,428 members. Of these, 68, or a percentage of 4·8 were idle at the end of the month as compared with a percentage of 4·7 in December. There was a slight lessening in work afforded from January, 1936, when 3·7 per cent of idleness was recorded.

Activity for civic employees subsided slightly during January from the previous month, the 82 unions furnishing reports, with an aggregate of 9,203 members, indicating an unemployment percentage of 3·5 in contrast with 1·5 per cent at the close of December, 1936. Slight losses in available work were also reflected from January, 1936, when 2·1 per cent of the members reported were without employment.

Reports were compiled at the close of January, from 129 unions in the miscellaneous groups of trades, involving a membership of 6,692 persons, 682, or a percentage of 10·2 of whom were unemployed, contrasted with 9·4 per cent in December, and 11·5 per cent in January, 1936. The situation for hotel and restaurant employees declined moderately from December, and among unclassified workers, theatre and stage employees, and barbers, there was some curtailment in work afforded. Stationary engineers and firemen, alone, indicated a favourable employment movement. When contrasting with the returns for January, 1936, hotel and restaurant employees reported a 4 per cent gain in activity during the period under survey, and barbers, and stationary engineers and firemen, improvement of somewhat lesser importance. The trend for theatre and stage employees, was also favourable, though the change from January a year ago was less than 1 per cent. Minor contractions in activity were apparent among unclassified workers.

TABLE II—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Month	Fishing	Lumbering and Logging	Mining	Manufacturing industries	Vegetable products	Pulp and paper products	Pulp and paper mill workers	Printing, publishing and lithographing	Electric current	Wood products	Fibres, textiles and textile products	Textile and carpet workers	Garment workers	Hat, cap and glove workers	Animal products	Iron and its products	Non-ferrous metals	Clay glass and stone products	Mineral products	Miscellaneous manufacturing industries	Building and construction	Transportation	Shipping and stevedoring	Steam railway operation	Local transportation	Communication	Telegraph operation	Telephone operation	Trade (retail shop clerks)	Services	Governmental	Miscellaneous	All occupations

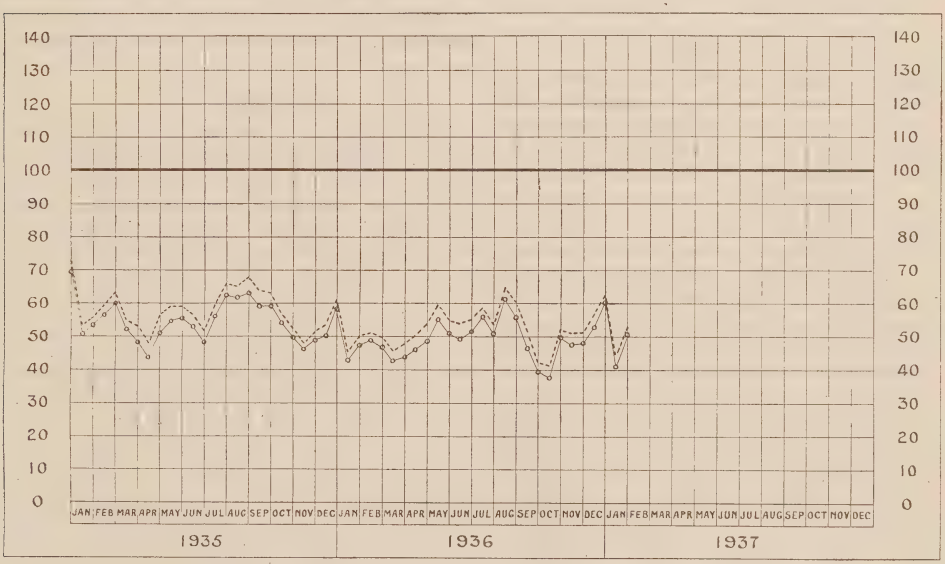
The fishing industry was considerably slacker during January than in either the previous month or January, 1936, as manifest by the reports tabulated from 4 associations including 593 members. Of these, 340, or 57·3 per cent, were idle at the close of the month as contrasted with percentages of 36·8 in December and 49·3 in January, 1936.



Unemployment in the lumbering and logging industry was in approximately the same volume during January, as in the preceding month, though conditions were much improved from January, 1936. This was apparent from the reports received from 2 unions, comprising a membership of 1,517 person, 2·4 per cent of whom were reported idle at the close of the month, compared with 2·3 per cent in December, and with a percentage of 11·6 in January, 1936.

Table I shows by provinces the percentages of members who were on an average unemployment each year from 1919 to 1936 inclusive, and also the percentages of unemployment by provinces for January of each year from 1919 to 1934 inclusive, and for each month from January, 1935, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

(3) Employment Office Reports for January, 1937

During the month of January, 1937, the volume of business, as shown by the average daily placements effected by the offices of the Employment Service of Canada, was nearly five per cent less than that transacted during the previous month, but fractionally higher than that of the corresponding period a year ago. Under the first comparison the heaviest declines were shown in farming and services, with others of smaller volume in trade, mining, and transportation. These losses were, however, partly offset by gains in construction and maintenance, logging and manufacturing, the highest being in the first named division. When compared with January of last year, all groups, except farming, construction and maintenance and trade reported increased placements, the most noteworthy expansion taking place in logging, services and manufacturing and the largest losses in farming and construction and maintenance. Changes in other groups were small.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

The accompanying chart shows the trend of employment since January, 1935, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen from the graph that the curves of vacancies

and placements in relation to applications declined sharply during the first half of January, but showed a marked rise during the latter half of the month and at the close of the period under review, both curves had risen to levels about 3 points higher than those shown at the end of the corresponding month a year ago. The ratio of vacancies to each 100 applications was 44·8 and 53·0 during the first and the second half of January, 1937, in comparisons with ratios of 45·3 and 50·1 during the same periods of 1936. The ratios of placements to each 100 applications during the month under review were 41·0 and 50·7, as compared with 42·5 and 47·9 during the corresponding periods a year ago.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during January, 1937, was 1,228, as compared with 1,281 during the preceding month and with 1,171 for January, 1936.

The average number of applications for employment received daily by the offices during the month under review was 2,527, in comparison with 2,156 in December and with 2,467 during January last year.

The average number of placements made daily by the offices of the Service during January, 1937, was 1,150 of which 873 were in regular employment and 277 in work of one week's duration or less, as compared with a total daily average of 1,209 during the preceding month. Placements in January a year ago averaged 1,109 daily, consisting of 720 in regular and 389 in casual employment.

During the month of January, 1937, the offices of the Service referred 30,271 persons to vacancies and effected a total of 28,746 placements; of these the placements in regular employment were 21,828, of which 16,898 were of men and 4,930 of women, while placements in casual work totalled 6,918. The number of vacancies reported by employers was 21,457 for men and 9,228 for women, a total of 30,685, while applications for work numbered 63,173, of which 48,585 were from men, and 14,588 from women. Reports for December, 1936, showed 33,284 positions available, 56,051 applications made and 31,411 placements effected, while in January, 1936, there were recorded 29,270 vacancies, 61,665 applications for work and 27,716 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1927, to date:—

Year	Placements		
	Regular	Casual	Totals
1927	302,723	112,046	414,769
1928	334,604	135,724	470,328
1929	260,747	137,620	398,367
1930	187,872	180,807	368,679
1931	175,632	295,876	471,508
1932	153,771	198,443	352,214
1933	170,576	181,521	352,097
1934	223,564	182,527	406,091

NOVA SCOTIA

During January, Employment Offices in Nova Scotia received orders for 10 per cent less workers than in the preceding month and over 27 per cent less than during the corresponding month of last year. There was a decrease also in placements of over 10 per cent when compared with December and of nearly 23 per cent in comparison with January, 1936. A decrease in placements under construction and maintenance was responsible for the decline from January of last year, as there were small gains in services, manufacturing and logging and nominal changes only in all other groups. Placements by industrial divisions included manufacturing, 28; logging, 49; construction and maintenance, 337; and services, 260, of which 225 were of household workers. During the month 100 men and 87 women were placed in regular employment.

NEW BRUNSWICK

The demand for workers, as indicated by orders received at Employment Offices in New Brunswick during January, was nearly 20 per cent less than in the preceding month and over 30 per cent below the corresponding month of last year. There was a decline also in placements of over 18 per cent when compared with December and of nearly 29 per cent in comparison with January, 1936. Placements under construction and maintenance and in services were considerably less than during January of last year and accounted for the decline under this comparison. These losses were, however, offset to a small extent by minor increases in logging, manufacturing and trade. Most of the placements effected during the month were in services, there being 415 placements in this group, including 345 of household workers. Placements in regular employment numbered 48 of men and 71 of women.

QUEBEC

There was a decline of over 3 per cent in the number of positions offered through Employment Offices in the Province of Quebec during January, when compared with the

preceding month, but a gain of 70 per cent in comparison with the corresponding month of last year. Placements were over 5 per cent less than in December, but nearly 74 per cent above January, 1936. Relief work and sewer and road construction continued to provide employment for large numbers of workers and placements of this kind, as in November and December, accounted for the increase recorded for the province, as a whole, over the corresponding month of last year. A small gain was reported in services, but there was a large decrease in bush placements and a somewhat smaller loss in manufacturing. Placements by industrial divisions included manufacturing, 78; logging, 688; construction and maintenance, 4,429; trade, 98 and services, 2,252, of which 2,130 were of household workers. During the month 5,311 men and 1,637 women were placed in regular employment.

Ontario

Orders received at Employment Offices in Ontario during January called for 14 per cent less workers than in the preceding month and over 17 per cent less than during the corresponding month of last year. There was a decrease also in placements of nearly 16 per cent when compared with December and of nearly 19 per cent in comparison with January, 1936. There was a substantial decline under construction and maintenance when compared with January of last year, as fewer placements were made on relief work. Small losses were also reported in farming and trade. Bush placements, however, were considerably higher and manufacturing showed decided improvement. The changes in other groups were unimportant. Industrial divisions in which most of the placements were effected during the month were manufacturing, 542; logging, 1,521; farming, 362; construction and maintenance, 1,161; trade, 194 and services, 3,091, of which 2,170 were of household workers. Placements in regular employment numbered 2,990 of men and 1,398 of women.

Manitoba

Opportunities for employment, as indicated by orders received at Employment Offices in Manitoba during January, were nearly 26 per cent less favourable than the previous month, but nearly 17 per cent better than during the corresponding month of last year. Similar percentages of change were reported in placements under both comparisons. Placements in farming, logging and services were higher than in January, 1936, and accounted for the increase under this comparison for the province as a whole. These gains were partly offset by a decrease under construction and maintenance. Changes in other groups were unimportant. Placements by industrial divisions included, logging, 322; farming, 2,584; construction and maintenance, 219 and services, 869, of which 800 were of household workers. There were 3,119 men and 666 women placed in regular employment during the month.

Saskatchewan

There was a decline of nearly 25 per cent in the number of positions offered through Employment Offices in Saskatchewan during January when compared with the preceding month, and of nearly 31 per cent in comparison with the corresponding month of last year. Placements also were over 29 per cent less than in December and nearly 38 per cent below January, 1936. There was a large decrease in farm placements when compared with January, 1936, but small increases in nearly all other groups, the largest of which were in services, construction and maintenance and logging. Placements by industrial divisions included, logging, 119; farming, 1,125; construction and maintenance, 196 and services, 731, of which 577 were of household workers. During the month 1,334 men and 519 women were placed in regular employment.

Alberta

During January, orders received at Employment Offices in Alberta called for over 4 per cent more workers than in the preceding month, but over 3 per cent less than during the corresponding month of last year. There was an increase in placements of nearly 15 per cent when compared with December, but a decrease of nearly one per cent in comparison with January, 1936. Placements in logging and farming were higher than in January of last year, but a loss under construction and maintenance almost entirely offset these gains. There were no changes of importance in other groups. Industrial divisions in which most of the placements were effected during the month were, logging, 447; farming, 852; construction and maintenance, 762 and services, 393, of which 332 were of household workers. Placements in regular employment numbered 2,099 of men and 264 of women.

British Columbia

Employment opportunities, as indicated by orders received at Employment Offices in British Columbia during January, were nearly 44 per cent better than in the preceding month and nearly 18 per cent above the corresponding month of last year. Slightly lower percentages of increase were reported

*1,731 placements effected by offices since closed.

in placements under both comparisons. A substantial gain in logging was mainly responsible for the increase in placements over January, 1936, although with the exception of a moderate decline in services, all industrial divisions showed improvement. Placements by industrial divisions included, logging, 559; farming, 63; construction and maintenance, 2,605; trade, 58 and services, 758; of which 512 were of household workers. There were 1,897 men and 288 women placed in regular employment during the month.

Movement of Labour

During the month of January, 1937, the offices of the Employment Service of Canada effected 21,828 placements in regular employment, 11,169 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 945 were granted the Employment Service reduced transportation rate, 899 travelling to centres within the same province as the despatching office, and 46 to other provinces. The reduced transportation rate which is 2·5 cents per mile with a minimum fare of $4 is granted by the railway companies to bona fide applicants at the office of the Employment Service who may wish to travel to distant employment for which no workers are available locally.

In Ontario, during January, 673 persons took advantage of the Employment Service reduced transportation rate, 667 of whom were bound for provincial situations, and 6 for centres outside the province. The latter were miners transferred from Sudbury to employment in the Hull zone. Within the province the Port Arthur office was instrumental in the despatch of 337 bush-workers, 3 mine workers, 3 cafe waitresses, 2 fishermen, and 2 domestics, the Fort William office of 194 bush-workers, and the Sudbury office of 27 bush-workers to various points within their respective zones. In addition, the Port Arthur zone received 12 bush men from Sudbury and Fort William zone, one miner from Timmins. Travelling to the Timmins zone were 69 bush men, 34 of whom secured their certificates for transportation at the North Bay office, 20 at the Sudbury office, and 15 at the Pembroke office. The Sault Ste. Marie zone was the destination of 13 bush men transferred from North Bay, and of 4 bush men sent from Sudbury. Manitoba transfers at the reduced rate during January numbered 90, of which 60 were provincial, and 30 interprovincial. All of these were effected by the Winnipeg office which despatched 56 bush workers, 2 highway construction workers, one farm hand, and one hotel waitress within its own zone, while the workers going outside the province were bound for the Port Arthur zone, and included 25 bush men, 3 domestics, one mine cook, and one machinist. Offices in Saskatchewan issued 66 certificates for reduced transportation during January, 56 of which were for points within the province, and 10 for outside centres. The movement was largely of bush workers, the Saskatoon office transferring 40 to Prince Albert, and the Prince Albert office 13 within the same zone. The Prince Albert zone also received one teacher from Saskatoon. From Yorkton one bush man was carried at the reduced rate to a point within the territory covered by that zone office. On a certificate granted at Regina, one teacher was conveyed to a situation within the Regina zone. The 10 persons proceeding outside the province were sent from Regina and were bush men destined to the Brandon zone. Business transacted by the Alberta offices during January involved the issue of 111 reduced rate certificates all of which were granted to persons going to employment in the Edmonton zone. Included among these were 80 bush-workers, 13 miners, 10 highway construction workers, 2 domestics, and one edgerman, despatched by the Edmonton office. and 4 bush men and one farm hand shipped from Calgary. The labour movement in British Columbia during January was to provincial points and comprised the transfer of 5 persons. On certificates secured at Vancouver 2 miners journeyed to Kamloops, one farm hand to Penticton, and one hotel cook to a point within the Vancouver zone. For employment within its own zone the Prince Rupert office transferred one teamster.

Of the 945 workers who were carried at the Employment Service reduced transportation rate during January, 513 travelled over the Canadian National Railways, 393 over the Canadian Pacific Railway, 35 over the Temiskaming and Northern Ontario Railway, 3 over the Northern Alberta Railway, and one over the Pacific Great Eastern Railway.

(4) Building Permits issued in Canada during January, 1937

There was a seasonal decline in the value of the building permits issued by 58 cities during January as compared with the preceding month, but the total was considerably higher than in January, 1936; the co-operating municipalities reported permits for buildings estimated to cost $1,684,502, compared with $3,282,166 in December, 1936, and $1,302,758 in January of last year. There was, therefore, a reduction of 48·7 p.c. in the first comparison,

but an increase of 29·3 p.c. in the second and more significant comparison.

Some 50 cities furnished detailed statements, showing that they had granted some 110 permits for dwellings valued at over $605,000, and more than 500 permits for other buildings estimated to cost approximately $850,000. In December, authority was granted for the erection of some 165 dwellings and 700 other buildings, estimated to cost approximately $1,200,000 and $1,700,000, respectively.

New Brunswick only, reported an increase in the value of the building authorized in January over December, 1936, there being a gain of $22,200 or 206·0 p.c. in this comparison. Of the declines elsewhere recorded, the most marked were those of $530,658 or 59·1 p.c. in Quebec, and $860,151 or 49·4 p.c. in Ontario.

As compared with January, 1936, Nova Scotia, New Brunswick, Quebec, Ontario, Saskatchewan and Alberta showed increases, that of $423,021 in Ontario being largest. In Manitoba and British Columbia, on the other hand, the value of projected building as represented by the building permits taken out showed reductions, that of $205,166 or 46·9 p.c. in the latter being considerable.

In Winnipeg and Vancouver there were decreases in the value of the building permits granted as compared with the preceding month, and also as compared with the same month of last year; in Montreal and Toronto there was a decline in the former, but an increase in the latter comparison. The following cities reported increases as compared with December and also as compared with January of last year,—Sydney, Fredericton, Quebec, Westmount, Brantford, Guelph, Kitchener, London, Niagara Falls, Stratford, York and East York Townships, Welland, Windsor, Regina, Calgary and Victoria.

Year	Value of permits issued in January	Indexes of value of permits issued in January (1926=100)	Indexes of wholesale prices of building in January (1926 average =100)

The small accompanying table gives the value of the building authorized by 58 cities during January of each year since 1920. Index numbers of wholesale prices of building materials in January of the same years are also given.

The 1937 figure was higher by 29.3 per cent than in January 1936, and was also higher than in 1935, 1934 and 1933, but with these exceptions was lower than in any other year since 1920. The wholesale costs of building materials in recent months have been rather higher than in the same period of the last few years, although they continue lower than in any of the years, 1930-1920.

The second accompanying table gives the value of the building permits issued by 58 cities in January, 1937, and December and January, 1936. The statistics for all but the present year are based on revised statements furnished by the civic officials after the close of the year. The 35 cities for which statistics are available since 1910 are indicated thus "x".

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

THE British *Ministry of Labour Gazette*, February, 1937, summarized the employment situation as follows:—

Employment in January showed a seasonal decline, but this was much less marked than in previous years. There was a decline in employment between December 14, 1936 and January 25, 1937, in the distributive trades, woodworking (including furniture manufacture), the printing and paper trades, metal goods manufacture, the motor vehicle industry, electrical apparatus manufacture, the wood textile and hoisery industries, the building industry, hotel, boarding house, etc. service, the food industries, and port transport service; there was also a seasonal decline in agriculture. On the other hand there was an improvement in employment in coal mining, the cotton and linen industries, hat and cap making, boot and shoe manufacture, stone-quarrying, and public works contracting.

It is estimated that at January 25, 1937, the number of insured persons, aged 16-64, in employment in Great Britain, exclusive of agricultural workers, was approximately 11,106,000. This was 26,000 less than at December 14, 1936, but 715,000 more than at January 20, 1936. There is normally a much greater reduction in employment between December and January; the more favourable position shown by the figures this year is only partly accounted for by the fact that outdoor employment at December 14, was affected by adverse weather conditions.

Among insured workpeople, aged 16-64 (excluding agricultural workers), the percentage unemployed in Great Britain and Northern Ireland at January 25, 1937 (including those temporarily stopped as well as those wholly unemployed), was 12·6, as compared with 12·2 at December 14, 1936, and 16·2 at January 20, 1936. In Great Britain the percentage at January 25, 1937, was 12·3, as compared with 11·9 at December 14, and 16·0 at January 20, 1936.

At January 25, 1937, the numbers of persons on the Registers of Employment Exchanges in Great Britain were 1,433,957 wholly unemployed, 183,668 temporarily stopped, and 71,598 normally in casual employment, making a total of 1,689,223. This was 60,504 more than a month before, but 470,499 less than a year before. The total of 1,689,223 included 1,318,595 men, 51,036 boys, 263,225 women, and 56,367 girls. The increase between December and January in the numbers unemployed was largely due to the registration of juveniles who reached the school-leaving age at the end of the December term.

The persons on the Registers included 1,439,293 insured persons who were applicants for insurance benefit or unemployment allowances, 134,364 other insured persons (including insured juveniles under 16 years of age), and 115,566 uninsured persons. Of the 1,439,293 applicants for benefit or allowances, 793,689 had claims admitted for insurance benefit, and 572,429 had applications authorized for allowances at January 5, 1937; the balance of 73,175 included 42,561 persons whose position under the conditions relating to contributions paid and benefit received had not been determined. 8,602 persons who had been disqualified for short periods from receiving benefit, and 22,012 persons whose needs had been held not to justify payment of unemployment allowances.

In Great Britain and Northern Ireland the total number of persons on the Registers of Employment Exchanges at January 25, 1937, was 1,766,362, as compared with 1,702,673 at December 14, 1936, and 2,229,961 at January 20, 1936.

United States

Employment and pay-rolls in the combined manufacturing and non-manufacturing industries surveyed monthly by the U. S. Bureau

of Labour Statistics declined between December and January, according to a statement issued by Secretary of Labor Frances Perkins.

The decreases were due largely to seasonal recessions in retail-trade establishments, following the sharp expansion in the preceding month for the holiday trade and to seasonal declines in manufacturing industries which were accentuated by the decreases due to labour disputes in the automobile industry.

Approximately 710,000 fewer workers were employed in January than in December in the industries surveyed and weekly pay-rolls were estimated to be $18,500,000 less than in the preceding month.

Between January 1936 and January 1937 total employment in these industries showed a gain of nearly 1,3000,000 workers and weekly pay-rolls were approximately $51,500,00 greater.

Manufacturing Industries:—Factory employment and pay-rolls normally decline from December to January, due to a seasonal slackening of activities in many industries and also to temporary shutdowns for inventory and repairs. Decreases in employment ranging from 0·4 to 9·7 per cent have been shown in 13 of the preceding 17 years for which data are available. The decline of 1·7 per cent or 146,000 workers in January of the current year compares favourably with the January changes in factory employment over the preceding 17 years, notwithstanding the adverse effect of the strike in the automobile industry. Factory pay-rolls have declined in all but two of the preceding 17 years, the January 1937 decline of 4·7 per cent or $9,100,000 being only slightly greater than seasonal.

Employment declines were recorded for both the durable and non-durable goods groups of industries over the month interval. In the durable goods industries, the decrease of 2·7 per cent in employment lowered the January 1937 index to 90·2. The January index, with the exception of November and December 1936 is the maximum recorded since May 1930 and indicates 902 workers employed in the durable goods group in January 1937 for every 1,000 employed in 1923-25, the index-base period. The group of non-durable goods industries showed a decline of 1·0 per cent in employment over the month interval. The January 1937 employment index for this group (103·0) is, with the exception of the four last months of 1936, above the level of any month since December 1929, and indicates the employment of 1,030 workers in January for every 1,000 employed during the years 1923-25.

Non-manufacturing Industries.—Eight of the 16 non-manufacturing industries surveyed showed gains in number of workers over the month interval. The largest increases were in year-round hotels (6,200 workers) and telephone and telegraph companies (4,300 workers). In the former industry, the January gain raised the employment level above that recorded in any month since July, 1931. An increase of approximately 2,200 workers in the metal mining industry raised the January, 1937, employment level for that industry above that of any month since January, 1931. Gains in employment were also reported for bituminous coal mining, crude petroleum producing, laundries, brokerage, and insurance.

The outstanding decline in employment from December to January was in retail trade where the estimated decrease was nearly 540,000. This seasonal decrease reflects the release of large numbers of temporary workers engaged to handle Christmas business. The general merchandising group of retail establishments, which is composed of department, variety, general merchandising stores, and mail-order houses, reported a decrease of 32·9 per cent or approximately 390,000 workers over the month interval. In the group of "other retail" establishments, employment decreased 5·4 per cent, or by approximately 150,000 workers.

Wholesale trade establishments reported a small decrease (0·3 per cent), electric light and power and manufactured gas companies reported an employment loss of 1·2 per cent, and the electric railroad and motor-bus operation and maintenance industry reported a falling-off of 0·1 per cent. A seasonal decline of 1·5 per cent was shown in the dyeing and cleaning industry, and quarries and non-metallic mines reported a seasonal recession of 7 per cent—due to a curtailment of operations made necessary by winter weather. Anthracite mines showed a falling-off of 1·3 per cent in employment coupled with a decrease of 22·9 per cent in pay rolls.

In the private building construction industry, there was a seasonal decrease of 11·5 per cent in number of workers over the month interval. This decline, however, was slightly less than the decreases shown in 4 of the 5 preceding years for which figures are available.

Public Employment.—Employment on projects of The Works Program was 2,652,000 in January, a decrease of 313,000 compared with the number employed in December. Decreases in employment occurred on projects operated by Federal agencies and on projects operated by the Works Progress Administration. Of the total number of workers engaged on The Works Program in January, 2,307,000 employees were working on projects operated by the Works Progress Administration. Total pay-roll disbursements on The Works Program for the month amounted to $138,000,000. The

value of material orders placed amounted to more than $37,000,000.

Approximately 200,000 workers were employed on construction projects financed by funds provided by the Public Works Administration in January. This was a decrease of 43,000, or 18 per cent, compared with the number employed in December. Total pay-roll disbursements amounted to over $15,000,000. The value of orders placed for construction materials was $19,000,000. Of the total number of workers employed on the program in January, 128,000 were working on projects financed from E.R.A.A. 1935 funds and 2,500 on projects financed from funds provided by the First Deficiency Appropriation Act of 1936.

More than 407,000 workers were employed in emergency conservation work (Civilian Conservation Corps) in January, an increase of 33,000 over the preceding month. By far the greater part of this increase occurred in enrolled personnel. Of the total number of workers engaged on this program in January, 360,000 were enrolled workers; 8,000, reserve officers; 2,000, educational advisers; and 37,000, supervisory and technical employees. Pay-roll disbursements for January amounted to $19,000,000.

In January approximately 125,000 employees were engaged on construction projects financed from regular governmental appropriations. This was a decrease of 19,000, or 13 per cent, compared with the number employed in December. Pay-roll disbursements for the month amounted to $13,000,000 and the value of orders placed for materials to $12,000,000.

Construction and maintenance of State roads employed 133,000 workers in January, a decrease of 27,000 or 17 per cent compared with December. The 16,000 employed on new construction and the 117,000 engaged in maintenance represented employment decreases of 24 and 16 per cent respectively, compared with December. Pay-roll disbursements for January totalled over $8,000,000.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor the full text of which appeared in the Labour Gazette for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the Provincial Minimum Wages Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of Federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wages scales of the respective provinces.

As respects contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, were superseded in 1930, in so far as wages and hours are concerned by an Act of Parliament known as "The Fair Wages and Eight Hour Day Act, 1930." This Act, however, has now in turn been superseded by The Fair Wages and Hours of Labour Act, 1935, which came into force on May 1, 1936. The clause relating to wages and hours in the last-named statute is in the terms following:—

"All persons in the employ of the contractor, subcontractor, or any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages;

"The working hours of persons while so employed shall not exceed eight hours per day or forty-hours per week except in such special cases as the Governor in Council may otherwise provide, or except in case of emergency as may be approved by the Minister."

The new Act like the 1930 measure, applies not only to contracts made with the Government of Canada for the construction, remodelling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did not appear in the 1930 legislation, which applies the fair wages policy to works of construction, remodelling, repair or demolition that are assisted by federal grant in the form of contribution, subsidy, loan, advance or guarantee.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules known as fair wages schedules, are thereupon included by the Department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade, or fair and reasonable hours on contracts for governmental supplies and equipment, the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work anld also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid out and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed, claim therefor may be filed with the Minister of the Department with which the contract has been made and payments of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Orders in Council, it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any dispute which may arise.

During the past month statements were received in the Department of Labour showing that the following contracts have recently been executed by the Government of Canada.

Department of Fisheries

Contract in Group "A" (Construction, Repair, Remodelling, etc.)

Contsruction of repairs to and overhaul of the C.G.S. *Malaspina*. Name of contractors, Victoria Machinery Depot, Ltd., Victoria, B.C. Date of contract, January 30, 1937. Amount of contract, $4.090, plus unit rates for chipping and zinc. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Blacksmiths	$0 75	8
Blacksmiths' helpers	0 55	8
Boilermakers	0 75	8
Bricklayers	0 90	8
Carpenters—ships	0 75	8
Caulkers—iron	0 75	8
Caulkers—wood	0 75	8
Electricians	0 68	8
Labourers	0 50	8
Machinists	0 75	8
Machinists' helpers	0 50	8
Moulders—iron	0 68	8
Painters	0 65	8
Patternmakers	0 75	8
Platers	0 75	8
Riggers	0 62	8
Riveters	0 75	8
Rivet holders	0 65	8
Rivet heaters	0 58	8
Ship's fitters	0 75	8
Teamsters	0 45	8
Teamsters with team and wagon	0 85	8
Welders—acetylene	0 75	8
Welders—electric	0 75	8
Truck drivers	0 45	8

N.B.—The wage rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

Department of Mines and Resources

Contracts in Group "B" (Manufacture of Supplies, etc.)

A contract governed by the "B" labour conditions was recently awarded by the Indian Affairs Branch of the Department of Mines and Resources to The Slingsby Manufacturing Co. of Brantford, Ont., for the manufacture of gray flannel.

Department of National Defence

Contracts in Group "A" (Construction, Remodelling, Repair, etc.)

Construction of a transformer vault at the Radio Station, Mann Avenue, Ottawa, Ont. Name of contractors, Ed. Monette Co., Ottawa, Ont. Date of contract, February 5, 1937. Amount of contract, $417. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Carpenters	$0 70	8	44
Cement finishers	0 60	8	44
Cement and concrete mixer operators:—			
Steam	0 70	8	44
Gasoline or electricity	0 50	8	44
Electricians (inside wiremen)	0 70	8	44
Labourers	0 40	8	44
Pipe fitters (surface—temporary work)	0 55	8	44
Plumbers and steamfitters	0 83	8	44
Roofers, felt and gravel	0 45	8	44
Roofers, sheet metal	0 75	8	44
Rodmen—reinforced steel	0 50	8	44
Watchmen	0 35	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Construction of an extension to the steam heating main to the Single Officers' Quarters, Royal Canadian Air Force, Trenton, Ont. Name of contractors, Frontenac Construction Co., Ltd., Toronto, Ont. Date of contract, February 9, 1937. Amount of contract, $2,365. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Asbestos insulation workers	$0 65	8	44
Carpenters	0 70	8	44
Cement finishers	0 60	8	44
Cement and concrete mixer operators (steam)	0 65	8	44
Cement and concrete mixer operators (gas. or elec.)	0 50	8	44
Compressor operators (gas. or elec.)	0 50	8	44
Drivers	0 40	8	44
Driver, horse and cart	0 55	8	44
Driver, team and wagon	0 75	8	44
Firemen—stationary	0 45	8	44
Labourers	0 40	8	44
Motor truck drivers	0 45	8	44
Motor truck driver and truck—			
1 and 2 tons	1 45	8	44
3 tons	1 95	8	44
4 tons	2 45	8	44
5 tons	2 95	8	44
Plumbers and steamfitters	0 75	8	44
Rodmen—reinforced steel	0 50	8	44
Sheet metal workers	0 70	8	44
Structural steel workers	0 80	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Construction of a sewage pumping station at the Dominion Arsenal, Valcartier, P.Q. Name of contractor, Mr. Romeo Parent, Beauport, P.Q. Date of contract, February 15, 1937. Amount of contract, $6,775. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Asbestos insulation workers	0 60	8	44
Brick and hollow tile layers	0 80	8	44
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 45	8	44
Carpenters	0 60	8	44
Cement finishers	0 55	8	44
Cement and concrete mixer operator (steam)	0 60	8	44
Cement and concrete mixer operator (gas. and elec.)	0 50	8	44
Compressor operator (gas. and elec.)	0 50	8	44
Driver, horse and cart	0 55	8	44
Driver, team and wagon	0 65	8	44
Drivers	0 40	8	44
Engineers, operating, steam:			
1 or 2 drums	0 60	8	44
3 or more drums	0 70	8	44
Hoist operators (gas. or elec.)	0 50	8	44
Electricians	0 65	8	44
Firemen—stationary	0 45	8	44
Labourers	0 40	8	44
Machinists	0 65	8	44
Motor truck drivers	0 45	8	44
Motor truck driver and truck:			
1 and 2 tons	1 45	8	44
3 tons	1 95	8	44
4 tons	2 45	8	44
5 tons	2 95	8	44
Painters and glaziers	0 55	8	44
Plasterers	0 70	8	44
Plasterers' helpers (mixing and tempering material)	0 45	8	44
Plumbers and steamfitters	0 65	8	44
Roofers, felt and gravel	0 45	8	44
Rodmen—reinforced steel	0 50	8	44
Sheet metal workers	0 65	8	44
Shovel operators—gas	0 85	8	44
Steam shovel engineers	0 85	8	44
Steam shovel cranemen	0 65	8	44
Steam shovel oilers	0 55	8	44
Watchman	0 35	8	44

N.B.—Where, by agreement or current practice, the working hours of any class are less than 44 a week, such lesser hours shall not be exceeded on this work.

Construction of alterations to the Officers' Mess at the Armoury, Belleville, Ont. Name of contractor, Mr. E. F. Rutherford, Belleville, Ont. Date of contract, February 5, 1937. Amount of contract, $925. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Brick and hollow tile layers	$0 90	8	44
Brick and hollow tile layers' helpers (continuously employed mixing and tempering mortar)	0 45	8	44
Carpenters	0 70	8	44
Cement finishers	0 60	8	44
Driver, horse and cart	0 55	8	44
Driver, team and wagon	0 75	8	44
Driver	0 40	8	44
Electricians	0 70	8	44
Labourers	0 40	8	44
Lathers—metal	0 70	8	44
Lathers—wood	0 65	8	44
Motor truck driver	0 45	8	44
Motor truck driver and truck:			
1 and 2 tons	1 45	8	44
3 tons	1 95	8	44
4 tons	2 45	8	44
5 tons	2 95	8	44
Painters and glaziers	0 60	8	44
Plasterers	0 80	8	44
Plasterers' helpers (continuously employed mixing and tempering material)	0 45	8	44
Sheet metal workers	0 70	8	44
Stonecutters	0 75	8	44

N.B.—The wage rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates ln any instance where such higher rates are fixed by provinciia legislation.

Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lessre hours shall not be exceeded on this work.

Laying of a water supply main to the Officers' Mess Building at Barriefield, Ont. Name of contractor, Mr. Donald A. McLeod, Kingston, Ont. Date of contract, February 26, 1937. Amount of contract, $1,490. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Pipe layers	$0 50	8	44
Plumbers and steamfitters	0 80	8	44
Labourers	0 40	8	44
Truck driver	0 45	8	44
Truck driver and truck: 1 to 2 tons	1 45	8	44
Teamster	0 40	8	44
Teamster, team and wagon	0 75	8	44
Watchman	0 35	8	44

N.B.—The wage rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by agreement or current practice, the working hour s of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Construction of a concrete tunnel and the provision of fittings for the extension of the heating system to the Power Sub-Station of the Barracks at Barriefield, Ont. Name of contractor, Mr. Thos. A. Andre, Kingston, Ont. Date of contract, February 27, 1937. Amount

of contract, $4,962.50. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Asbestos insulation workers	$0 70	8	44
Blacksmiths	0 65	8	44
Carpenters	0 75	8	44
Cement finishers	0 95	8	44
Cement and concrete mixer operator:			
Steam	0 65	8	44
Gasoline or electricity	0 50	8	44
Driver, horse and cart	0 55	8	44
Driver, team and wagon	0 75	8	44
Drivers	0 40	8	44
Engineers, operating, steam:			
Single or double drums	0 65	8	44
Three or more drums	0 75	8	44
Hoist operators—gas. or elec	0 50	8	44
Firemen—stationary	0 45	8	44
Labourers	0 40	8	44
Motor truck drivers	0 45	8	44
Motor truck driver and truck:			
1 and 2 tons	1 45	8	44
3 tons	1 95	8	44
4 tons	2 45	8	44
5 tons	2 95	8	44
Plumbers and steamfitters	0 80	8	44
Rodmen—reinforced steel	0 50	8	44
Shovel operators—gas	0 90	8	44
Steam shovel engineers	0 90	8	44
Steam shovel cranemen	0 70	8	44
Steam shovel firemen	0 55	8	44
Steam shovel oilers	0 50	8	44
Compressor operators—gas or elec.	0 50	8	44
Watchman	0 35	8	44

N.B.—The wage rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Contracts for the Manufacture, Overhaul and Reconditioning of Aircraft

Four contracts for the overhaul and reconditioning of Fairchild "71" Aircraft Nos. 630, 633, 642 and 647 were awarded during the month of February to the Fairchild Aircraft Ltd., Longueuil, P.Q., which were subject to the following fair wages schedule:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per week
Engine assembly:—		
Fitter (A.E.)	0 55	48
Fitter's helper (A.E.)	0 40	48
Machinist	0 55	48
Machinist's helper	0 40	48
Machine operators	0 50	48
Sandblaster	0 45	48
Labourers over 18 years of age	0 35	48
Labourers under 18 years of age	0 30	48
Airframe construction and assembly:—		
Fitter (A.F.)	0 55	48
Fitter's helper (A.F.)	0 40	48
Machinist	0 55	48
Machinist's helper	0 40	48
Woodworker (joiner)	0 55	48
Woodworker's helper	0 40	48
Welder	0 55	48
Welder's helper	0 40	48
Electrician	0 55	48
Electrician's helper	0 40	48
Painter	0 55	48
Painter's helper	0 40	48
Fabric worker—female	0 35	48
Fabric worker's helper	0 25	48
Upholsterer	0 55	48
Upholsterer's helper	0 40	48
Sand blaster	0 45	48
Labourers over 18 years of age	0 35	48
Labourers under 18 years of age	0 30	48
Erector	0 55	48
Erector's helpers	0 40	48
Sheet metal worker	0 55	48
Sheet metal worker's helper	0 40	48
Doper	0 50	48
Apprentices to fitters, machinists and sheet metal workers only—16 to 21 years of age:—		
1st year	0 20	48
2nd year	0 25	48
3rd year	0 35	48

NOTE.—Only one helper to be employed to each journeyman. Not more than one apprentice to be employed to each 5 journeymen.

Contracts in Group "B" (Manufacture of Equipment, Supplies, etc).

The following is a statement of contracts awarded by the Department of National Defence during the month of February for the manufacture and repair of various classes of equipment and supplies, which contracts included in all cases the "B" labour conditions above referred to:—

Nature of contract	Contractor
Blue serge jackets	Tip Top Tailors Ltd., Toronto, Ont.
Blue serge	Rosamond Woollen Co., Ltd., Almonte, Ont.
Blue forage caps	Wm. Scully Ltd., Montreal, P.Q.
Breeches	Workman Uniform Co., Montreal, P.Q.
Warm greatcoats	Workman Uniform Co., Montreal, P.Q.
Blue serge	Dominion Woollens & Worsteds Ltd., Toronto, Ont.
Blue frieze	Horn Bros. Woollen Co., Ltd., Lindsay, Ont.
Khaki drill	The Montreal Cottons Ltd., Montreal, P.Q.
Moleskin pantaloons	S. S. Holden Ltd., Ottawa, Ont.
Arm chairs	The Farquharson-Clifford Co., Ltd., Stratford, Ont.
Folding tables	The Canadian Office & School Furniture Co., Preston, Ont.
Drill jackets	S. S. Holden Ltd., Ottawa, Ont.
Overalls	Canadian Converters Co., Ltd., Montreal, P.Q.
Brass badges and buttons	Wm. Scully Ltd., Montreal, P.Q.

Nature of contract	Contractor
Transmitter and set of spare parts.	Northern Electric Co., Ltd., Montreal, P.Q.
Overhaul and modification of aeroplane engine.	Canadian Wright Ltd., Montreal, P.Q.
Complete overhaul of Wasp engine.	Canadian Pratt & Whitney Aircraft Co., Ltd., Longueuil, P.Q.
Reconditioning and modification of Siskin landplane.	Armstrong Siddeley Motors Ltd., Ottawa, Ont.

POST OFFICE DEPARTMENT

Contracts in Group "B" (Manufacture of Supplies, etc.)

The following is a statement of contracts awarded by the Post Office Department during the month of February, 1937, for various classes of manufactured goods, which contracts included in all cases the "B" labour conditions above referred to:—

Supplies ordered	Contractor
Metal dating stamps and type, brass crown seals, cancellers, etc.	Pritchard-Andrews Co., Ltd., Ottawa, Ont.
Rubber stamps, daters, etc.	Pritchard-Andrews Co., Ltd., Ottawa, Ont.
Letter carriers' uniforms	Pollack & Dorfman, Quebec, P.Q.
" "	M. Feldstein Son Co., Montreal, P.Q.
" "	Horn Bros. Woollen Co., Ltd., Lindsay, Ont.
" "	Uniform Cap Co., Ottawa, Ont.
Mail bag fittings	Fred W. Carling, Ottawa, Ont.
"	Smallman & Ingram Ltd., London, Ont.
"	Bell Thread Co., Ltd., Hamilton, Ont.
Scales	Pritchard-Andrews Co., Ltd., Ottawa, Ont.

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, Remodelling, Repair, etc.)

Construction of a public building at L'Islet, P.Q. Name of contractors, Messrs. Henri Lemelin and Joseph Lacroix, both of St. Romuald, P.Q. Date of contract, February 2, 1937. Amount of contract, $7,482 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Cement and concrete mixer operator —gas. or elec.	$0 40	8	44
Cement finishers	0 50	8	44
Stonemasons	0 70	8	44
Stonemasons' helpers (continuously employed mixing and tempering mortar)	0 35	8	44
Brick and hollow tile layers	0 70	8	44
Brick and hollow tile layers' helpers (continuously employed mixing and tempering mortar)	0 35	8	44
Stonecutters	0 60	8	44
Carpenters and joiners	0 50	8	44
Sheet Metal workers	0 55	8	44
Lathers, metal	0 50	8	44
Plasterers	0 70	8	44
Plasterers' helpers (continuously employed mixing and tempering material)	0 35	8	44
Painters and glaziers	0 50	8	44
Plumbers and steamfitters	0 55	8	44
Electricians	0 55	8	44
Labourers	0 30	8	44
Driver, horse and cart	0 45	8	44
Driver, team and wagon	0 55	8	44
Motor truck driver	0 35	8	44
Motor truck driver and truck:—			
1 and 2 tons	1 35	8	44
3 tons	1 85	8	44
4 tons	2 35	8	44
5 tons	2 85	8	44
Watchman	0 25	8	44

N.B.—The wage rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Construction of an enlargement to the wharf and improvements, Savary Island, Comox-Alberni District, B.C. Name of contractors, Victoria Pile Driving Co., Ltd., Victoria, B.C. Date of contract, February 1, 1937. Amount of contract, $10,665. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Pile driver foreman	$1 12½	8	44
Pile driver engineer	1 00	8	44
Pile driver man	0 90	8	44
Pile driver boomman	0 90	8	44
Pile driver bridgeman	0 90	8	44
Pile driver fireman	0 65	8	44
Pile driver labourer	0 40	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Construction of fishing harbour improvements at Pointe Jaune, Gaspe Co., P.Q. Name of contractors, Dumont & D'Amours, Enrg., Riviere du Loup, P.Q. Date of contract, January 25, 1937. Amount of contract, approximately $23,398.40. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Machinist	$0 55	8	44
Blacksmith	0 50	8	44
Carpenter and joiner	0 50	8	44
Timbermen and cribmen (using interchangeably such tools as: broad-axe, hammer, x-cut saw, auger, adze)	0 37½	8	44
Driver, horse and cart	0 45	8	44
Driver, team and wagon	0 55	8	44
Drivers	0 30	8	44
Motor truck driver	0 35	8	44
Motor truck driver and truck:—			
1 and 2 tons	1 35	8	44
3 tons	1 85	8	44
4 tons	2 35	8	44
5 tons	2 85	8	44
Drill runners	0 40	8	44
Piledriver engineer	0 55	8	44
Boatman	0 30	8	44
Fireman	0 35	8	44
Hoist operator—gas	0 40	8	44
Compressor operators	0 40	8	44
Labourers	0 30	8	44
Watchman	0 25	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Construction of bank protection work at Woodward's Channel, Lulu Island, Fraser River, B.C. Name of contractors, Gilley Bros., Ltd., New Westminster, B.C. Date of contract, February 16, 1937. Amount of contract, approximately $26,180. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Pile driver engineer	$1 00	8	44
Pile driver man	0 90	8	44
Pile driver boomman	0 90	8	44
Derrick scow engineer	1 00	8	44
Fireman	0 65	8	44
Bridgeman	0 90	8	44
Boomman	0 90	8	44
Powderman	0 55	8	44
Drill runners	0 55	8	44
Labourers	0 45	8	44
Watchmen	0 40	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Construction of a wharf at Dalseg's Landing (Nestor Falls), District of Kenora, Ont. Name of contractors, The John East Company Ltd., Fort Frances, Ont. Date of contract, February 3, 1937. Amount of contract, approximately, $4,997.69. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Carpenters	$0 60	8	44
Drivers	0 35	8	44
Driver, team and wagon	0 65	8	44
Blacksmiths	0 55	8	44
Engineer operator—steam double drum	0 65	8	44
Hoist operator—gas	0 45	8	44
Labourers	0 35	8	44
Motor truck drivers	0 40	8	44
Motor truck drivers and truck:—			
1 to 2 tons	1 40	8	44
3 tons	1 90	8	44
4 tons	2 40	8	44
5 tons	2 90	8	44
Powdermen	0 45	8	44
Timbermen or cribmen*	0 42	8	44
Tractor operator	0 45	8	44

* (Using interchangeably such tools as: broad-axe, /x-cut saw, hammer, auger, adze).

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Construction of a breakwater at MacDiarmid, District of Thunder Bay, Ont. Name of contractors, Hewitson Construction Co., Ltd., Port Arthur, Ont. Date of contract, approximately, $8,299.96. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Blacksmiths	$0 55	8	44
Labourers	0 35	8	44
Motor truck driver	0 40	8	44

Stonemasons' helpers (continuously employed mixing and tempering mortar)	0 35	8	44
Timbermen and cribmen (using interchangeably such tools as broad-axe, saw, hammer, cross-cut saw, auger, etc.)	0 37½	8	44
Tractor operators	0 40	8	44
Welders and burners—			
Acetylene or electric	0 50	8	44
On Steel erection	0 75	8	44
Watchmen	0 25	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Construction of a public building at Ste. Martine, P.Q. Name of contractor, Mr. J. Laurent Giroux, St. Casimir, P.Q. Date of contract, February 6, 1937. Amount of contract, $6,532.38 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Brick and hollow tile layers	0 70	8	44
Carpenters and joiners	0 50	8	44
Cement finishers	0 50	8	44
Concrete mixer operator (gas. or elec.)	0 40	8	44
Electricians	0 55	8	44
Labourers	0 30	8	44
Lathers, metal	0 50	8	44
Ornamental iron workers	0 50	8	44
Painters and glaziers	0 50	8	44
Plasterers	0 70	8	44
Plasterers' helpers (continuously employed tempering and mixing material)	0 35	8	44
Plumbers and steamfitters	0 55	8	44
Sheet metal workers	0 55	8	44
Stone cutters (granite, sandstone and limestone)	0 60	8	44
Stone masons	0 70	8	44
Driver, horse and cart	0 45	8	44
Driver, team and wagon	0 55	8	44
Motor truck driver	0 35	8	44

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Motor truck driver and truck:—			
1 and 2 tons	1 35	8	44
3 tons	1 85	8	44
4 tons	2 35	8	44
5 tons	2 85	8	44
Driver	0 30	8	44
Watchman	0 25	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Deepening the western channel of the St. Maurice River at Three Rivers, Quebec. Name of contractor, St. Francis River Dredging Co., St. Francois du Lac, P.Q. Date of contract, November 7, 1936. Amount of contract, approximately $8,616.94. The General Fair Wages Clause was inserted in the contract.

Cleaning and re-dredging drainage canal, Riviere Laguerre, Huntingdon Co., P.Q. Name of contractors, Cummins Construction Co., Montebello, P.Q. Date of contract, October 20, 1936. Amount of contract, approximately $33,000.00. The General Fair Wages Clause was inserted in the contract.

Contracts in Group "B" (Interior Fittings, etc.)

Installation of interior fittings for Post Office in the Municipal Building at Delhi, Ont. Name of contractors, Canadian Office & School Furniture Ltd., Preston, Ont. Date of contract, January 26, 1937. Amount of contract, $538. The "B" labour conditions above referred to were inserted in the contract.

Alterations and additions to the fittings of the Customs House at Saint John, N.B. Name of contractors, Wallace Manufacturing Co., Ltd., Sussex, N.B. Date of contract, January 20, 1937. Amount of contract, $625. The "B" labour conditions were inserted in the contract.

Installation of interior fittings in the Post Office in the Municipal Building at Normandin, P.Q. Name of contractors, Henri Lamelin and Joseph Lacroix, St. Romuald, P.Q. Amount of contract, $638.50. The "B" labour conditions were inserted in the contract.

Installation of wood fittings in the public building at Regina, Sask. Name of contractors, Canadian Office and School Furniture Ltd., Preston, Ont. Date of contract, January 23, 1937. Amount of contract, $4,469. The "B" labour conditions were inserted in the contract.

Installation of interior fittings in the public building at Farnham, P.Q. Name of contractors, Messrs. Paquet & Godbout, St. Hyacinthe, P.Q. Date of contract, February 15, 1937. Amount of contract, $1,037. The "B" labour conditions were inserted in the contract.

Installation of interior fittings in the public building at Mildmay, Ont. Name of contractors, The Canadian Office and School Furniture Ltd., Preston, Ont. Date of contract, February 4, 1937. Amount of contract, $793. The "B" labour conditions were inserted in the contract.

Installation of interior fittings of wood, bronze, marble, etc., in the Postal Terminal Building, Montreal, P.Q. Name of contractors, Fraser Brothers, Ltd., Montreal, P.Q. Date of contract, February 9, 1937. Amount of contract, $10,899. The "B" labour conditions were inserted in the contract.

Installation of interior fittings in the public building at Beauséjour, Manitoba. Name of contractors, Canadian Office and School Furniture Ltd., Preston, Ont. Date of contract, January 29, 1937. Amount of contract, $922. The "B" labour conditions were inserted in the contract.

ROYAL CANADIAN MOUNTED POLICE

Contracts in Group "B" (Manufacture of Supplies, etc.)

Contracts were awarded by the Royal Canadian Mounted Police during the month of February, 1937, to Wm. Scully Ltd., Montreal, P.Q., for the manufacture of cap covers; and to John Leckie Ltd., Toronto, Ont., for the manufacture of fishnets, etc. Both these contracts were subject to the "B" labour conditions above referred to.

By Order in Council published in the *Saskatchewan Gazette*, a new schedule of fees under the Vehicles Act and the Public Service Vehicles Act has been established throughout the province. The schedule covers practically all classes of motor vehicles operating in the province.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the department. Such agreements are summarized each month in the Labour Gazette. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Food, Drink and Tobacco

London, Ontario.—A Certain Brewery and the National Beverage Workers Union, Local No. 1.

Agreement in effect from March 31, 1936, to March 31, 1937, and thereafter from year to year until notice.

Only union members or those who will join the union to be employed. Brewers and foremen are exempt from the agreement but if not union members they may not do the work of journeymen.

Hours: for all employees other than engineers and watchmen, 9 per day, 5 on Saturdays, a 50-hour week, from April 1 to September 30, and 8 per day, 5 on Saturdays, a 45-hour week from October 1 to March 31. For engineers and watchmen, 48 hours to constitute a week's work throughout the year.

Overtime and work on five specified holidays: time and one-half.

Minimum weekly wage rates: coopers $30, engineers and firemen $26, truck drivers $25, helpers $22.50; bottlers operating machines $24.50, other bottlers $22.50; watchmen (for not more than 12 hours per day, 6 days a week), fermenting room and cold storage, brewhouse and washhouse $24.50.

All drivers and helpers employed at the brewery for one year, to receive two weeks' holiday with pay during the winter months; if employed less than a year but more than six months, one week's holidays with pay. Drivers, delivering half barrels and barrels and large loads to have helpers.

Any grievances concerning violation of this agreement are to be settled by a joint arbitration committee.

Transportation and Public Utilities: Electricity and Gas

Winnipeg, Manitoba.—Winnipeg Electric Company and their Gas Works Employees.

Agreement to be in effect from May 1, 1936, to April 30. 1938, and thereafter from year to year until notice.

Neither the company nor the employees to discriminate against any employee for being or not being a member of the employees' organization of the Gas Works Department. Foremen and subforemen shall not be members of this organization.

Hours: 8 per day, a 48-hour week, on the battery and steam boilers; 9 per day, a 54-hour week, for yardmen, labourers and other like employees.

Overtime: time and one-half.

Hourly wage rates: exhauster operators, 60½ cents; heaters, producer operators, pusher operators, 57½ cents; door lifter operators, 56 cents to August 31, 1936, 57½ cents thereafter; quenching car operators, 56 cents; boilermen, 49½ cents; boiler washer, 48½ cents; handymen, pipefitters, tinsmiths, yardmen, and labour employed in coal cars and purifying house or any part of the gas works, 40½ cents.

Employees with five or more years' service with the company to be entitled to holidays with pay if they have worked 193 days or more in the twelve months preceding May 1, the number of days holidays varying from 8 to 12 days according to the number of days worked.

Employees to be furnished free transportation.

When vacancies occur, men having seniority in the company's service will be given preference with due regard to efficiency.

The company through its accredited representatives shall meet and confer with the representatives of the employees on questions which may arise from time to time between the company and its employees.

In cases which may require immediate adjustment, the foreman may confer with representatives of the employees' organization and arrange the point. If the arrangement is not satisfactory to the employees they may appeal to the superintendent of the plant, but the employees must carry out the orders of the foreman pending the appeal to the superintendent.

Quebec Collective Labour Agreements Extension Act

The following agreement has recently been made obligatory by an Order in Council and noted in the next article of this issue:—

Building Trades Apprentices, Montreal.

Industrial Standards Act of Ontario

The following schedules have been made binding by Orders in Council and are summarized on page 363:—

Barbering Trade, Fort William and Port Arthur;

Barbering Trade, Sarnia.

The Medical Research Council of the Industrial Health Research Board (Great Britain) has published a bulletin entitled "A Borstal Experiment in Vocational Guidance", which gives the results of an investigation undertaken on the request of the Prison Commission. The object of the inquiry was to try whether tests of the kind selected would be useful to the authorities in allocating Borstal boys to their respective work-parties; and whether boys were allotted a particular kind of work on the recommendation of the psychologist were more successful in that work than boys not so recommended.

COLLECTIVE LABOUR AGREEMENTS EXTENSION ACT OF QUEBEC

Agreements Recently Made Obligatory and Further Applications

Recent proceedings under the Collective Labour Agreements Extension Act include the extension by Order in Council of an agreement affecting apprentices in the building trades in Montreal and district, which is summarized below, and notices of requests for the extension of agreements governing the barbering trade at Victoriaville which was published in the *Quebec Official Gazette* February 6, and of an agreement governing the hairdressing trade at Montreal, published in the issue of February 20.

The text of the Collective Labour Agreements Extension Act, Quebec, was printed in the LABOUR GAZETTE, May, 1934, page 417, and amendments to the Act were summarized in the issues of June, 1935, page 526, July, 1936, page 607, and December, page 1127. Under this Act applications may be made to the provincial Minister of Labour by either party to a collective agreement made between, on the one hand, one or more associations of *bona fide* employees, and on the other hand employers or one or more associations of employers, to have those terms of such agreement which concern rates of wages, hours of labour and apprenticeship made obligatory on all employees and employers in the same trade, industry or business within the territorial jurisdiction determined by the agreement. The application is then printed in the *Quebec Official Gazette,* and during the following thirty days, objections may be made to the Minister of Labour. After this delay, if the Minister of Labour deems that the provisions of the agreement "have acquired a preponderant significance and importance" that would make the establishment of these conditions advisable, an Order in Council may be passed making the terms obligatory on all employees and employers in the trade, industry or business in the territory included in the agreement from the date of the publication of the Order in Council in the *Quebec Official Gazette* for the duration of the agreement. The provisions of an agreement thus made obligatory govern all individual labour contracts in the trade, industry or business and district, except that those individual contracts which are to the advantage of the employee will have effect unless expressly prohibited in the agreement which has been approved by Order in Council. The applications for extension of agreements have been noted and the conditions of the various agreements made obligatory by Orders in Council have been given in the LABOUR GAZETTE beginning in the issue of June, 1934. Beginning with the issue of the LABOUR GAZETTE for July, 1935, the terms of agreements have been summarized instead of being printed in full.

BUILDING TRADES' APPRENTICES, MONTREAL AND DISTRICT.—An Order in Council, approved February 19, and published in the *Quebec Official Gazette,* February 27, makes obligatory the terms of the agreement between La Chambre de Construction Incorporée de Montréal (The Montreal Builders' Exchange) and Le Conseil des Métiers de la Construction de Montréal et de la Banlieue (The Building Trades Council of Montreal and District) and Le Conseil des Métiers de la Construction des Syndicats Catholiques, Incorporé (The Building Trades Council of Catholic Unions, Incorporated).

The Order in Council, which is an amendment by addition to the Orders in Council affecting the building trades in Montreal (LABOUR GAZETTE, May, 1936, page 460, October, page 954, and January, 1937, page 105), was published in the *Quebec Official Gazette,* February 27, and is in effect from February 27 until the expiration of the building trades agreement March 31, 1937.

The joint committee in charge of the enforcement of the building trades agreement has jurisdiction over the apprentices and this committee is to keep a complete record of all apprentices with dates of their employment with each employer.

Employers agree to do their utmost to instruct apprentices in the trades in which they are working.

Apprentices must be at least 16 years and not more than 25 years when beginning apprenticeship, except in the case of structural steel workers and ornamental iron workers, who may not begin before the age of 20. Exceptions may be made by the joint committee for an apprentice to begin after 25 years of age where it was impossible for serious reasons to begin previously.

Except for the plumbing, electrical, ornamental iron and structural steel trades, each employer may employ one apprentice in one or more trades and in addition one apprentice for each ten journeymen employed. In the ornamental iron or bronze industry, one apprentice may be employed for each four journeymen, and in the structural steel industry one apprentice for each seven journeymen.

The period of apprenticeship is as follows: four years for the trades of bricklayers and masons, carpenters and joiners, metal lathers, marble setters, painters, glaziers and decorators, plasterers, roofers (slate and tile and composition), sheet metal workers, electricians, plumbers and steamfitters; three years for absestos coverers, cement finishers, wood lathers; two years for ornamental iron workers, and structural steel workers.

After his period of apprenticeship an apprentice shall take an examination of competency before a board of examiners in conformity with this Act and the Orders in Council under it.

The regulation of hours and the payment of overtime at time and one-half is the same as for journeymen in the original agreement.

Wage rates are fixed as percentages of the legal minimum wages for journeymen. For trades requiring four years of apprenticeship, 30 per cent of journeymen's minimum rate in the first year, 45 per cent in second year, 60 per cent in third year, and 75 per cent in fourth year. For trades requiring three years' apprenticeship, 45 per cent during first year, 60 per cent during second year, and 75 per cent during third year. For the trade of structural steel and ornamental iron workers, 50 per cent during first year and 75 per cent during second year. For the plumbing and steamfitting trades, including automatic sprinkling, 20 cents per hour during the first year, 25 cents during second year, 30 cents during third year, and 40 cents during fourth year.

INDUSTRIAL STANDARDS ACT OF ONTARIO

Schedules of Wages and Hours Recently Approved by Orders in Council

THE Industrial Standards Act of Ontario, the text of which was printed in the Labour Gazette, June, 1935, page 534, with amendments in the issue of May, 1936, page 410, provides that the Minister of Labour for Ontario may, upon petition of representatives of employees or employers in any industry, convene a conference or series of conferences of employees and employers in the industry, in any zone or zones to investigate the conditions of labour and practices in such industry and to negotiate standard rates of wages and hours of labour. The employees and employers in attendance may formulate and agree upon a schedule of wages and hours of labour for all or any class of employees in such industry or district. If, in the opinion of the Minister a schedule of wages and hours for any industry is agreed upon in writing by a proper and sufficient representation of employees and of employers, he may approve of it, and upon his recommendation, the Lieutenant-Governor in Council, may declare such schedule to be in force "during pleasure" or for a period not exceeding twelve months stipulated in the schedule and thereupon such schedule shall be binding upon every employee or employer in such industry in the whole or any part of the province designated by the Minister, such schedule not coming into effect until ten days after publication of the Order in Council in *The Ontario Gazette*. The Minimum Wage Board has authority to enforce the provisions of the Act and of the regulations and schedules. Beginning with the July, 1935, issue of the Labour Gazette, summaries are given in this article of the schedules which have thus been approved.

Barbers, Fort William and Port Arthur.—An Order in Council, dated February 9, and published in *The Ontario Gazette*, February 13, makes binding a schedule of wages and hours governing the barbering trade in the cities of Port Arthur and Fort William.

The Order in Council is in effect from February 23, 1937 "during pleasure."

Work may be performed on any day except Sundays, Wednesdays after 12.30 p.m. and nine specified holidays, providing that work may be done on Wednesday afternoon in any week in which one of these holidays occur.

The trade is classified as follows: Class A consists of person regularly employed on a percentage basis by a master barber, Class B of master barbers who personally perform work at the trade or for any person who carries on a business in a one-chair establishment or who operates a barber chair in any shop as a separate unit. For classes A and B, the minimum wage rate is "such percentage of the earnings of the barber or chair operated by him as will ensure to the barber a minimum wage equivalent to what he would have received for the same work if he had been employed pursuant to an arrangement whereby he would receive 65 per cent of the amount taken in at the following shop prices": hair cut (adults) 40 cents; shampoo (plain), facial massage (plain), razor honing, 35 cents; hair cut (children), shave, singe, 25 cents; hair tonic, neck clip (ladies) 15 cents. The minimum rate for Class C (persons regularly employed on a weekly salary basis) $22 per week; Class D (persons who are not regularly employed at the trade) $3 per day except if employed on Saturday or the day preceding a holiday, for which minimum rate is $5 per day. If employed for less than a full day, 60 cents per hour with a minimum of 3 hours' pay.

No deduction to be made from minimum wages for material supplied, laundry service or operating expenses of any kind.

Apprentices to be governed by the Ontario Apprenticeship Act.

Barbers, Sarnia.—An Order in Council, dated February 9, and published in *The Ontario Gazette*, February 13, makes binding a schedule of wages and hours governing the barbering trade in the city of Sarnia.

The Order in Council is in effect from February 23, 1937, "during pleasure."

This schedule is similar to the one summarized above for the barbering trade at Port Arthur and Fort William. The only difference is that in the list of shop prices on which the minimum wage is fixed, those jobs for which 35 cents is shown at Port Arthur and Fort William are 50 cents at Sarnia, and those for which 15 cents is shown are 25 cents at Sarnia.

PRICES, RETAIL AND WHOLESALE, IN CANADA, FEBRUARY, 1937

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was again upward, both the cost of the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being higher than in January. The advance in the former was due to the higher cost of foods and in the latter chiefly to higher prices for iron and steel, and non-ferrous metals.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of average retail prices in sixty-nine cities was $8.49 at the beginning of February as compared with $8.41 for January; $8.07 for February, 1936; $7.59 for February, 1935; $6.67 for March, 1933 (the low point in recent years); and $11.83 for February, 1930. Many items in this list of foods advanced somewhat in cost during the month under review, the most important increases being in potatoes, meats, lard, bread and flour. Declines were slight, except for a substantial fall in the cost of eggs. Price changes in the fuel group were slight and no changes were reported in rent. Including the cost of these two groups with that of foods the total budget was $17.12 at the beginning of February as compared with $17.04 for January; $16.58 for February, 1936; $16.06 for February, 1935; $15.41 for June, 1933 (the low point in recent years); $22.12 for February, 1930; $21.07 for February, 1922; $26.92 for July, 1920 (the post war peak); and $14.54 for February, 1914.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics resumed the advance in February, following a slight reaction during the last half of January. On a weekly basis the index was 83 for the week ended February 26 as compared with 81·6 for that ended January 29 and 81·9 for that ended January 13. The latest figures available on a monthly basis are for January, when the index number was 81·3 as compared with 72·5 for February, 1936; 71·8 for February, 1935; 63·5 for February, 1933 (the low point in recent years); 93·9 for February, 1930; 98·3 for February, 1922; 164·3 for May, 1920 (the post war peak); and 64·8 for February, 1914. The advance during the month under review was due in large part to higher prices for iron and steel and certain non-ferrous metals. Among the latter the price of copper has risen sixty per cent during the last year, lead sixty-two per cent and zinc fifty-six per cent. Other important price changes during February were declines in wheat, raw silk, raw sugar and coffee during the last two weeks. Egg prices advanced during the final week following an almost steady decline since the beginning of the year.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of February of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The price of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amount due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which figures were available when the publication of retail prices statistics was begun, that is for January, 1910, in the LABOUR GAZETTE for February, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of

(Continued on page 372)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost or the quantities of different foods required for an average family

price per cord from price quoted. f. Petroleum coke. g. Natural gas used extensively. h. Including lignite. i. Including conveniences. r. Mining company houses in district $5–$10 per month; others, five and six rooms, $10–$35. s. Delivered

(Continued from page 364)

the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number for rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

Retail Prices

The upward movement in the price of meats was more pronounced than in the previous month, the principal increases being, sirloin steak which advanced from 22·9 cents per pound in January to 24 cents in February, rib roast from 17 cents per pound to 17·8 cents, mutton from 21 cents per pound to 22·2 cents, and fresh pork from 20·6 cents per pound to 21·6 cents. Exceptions to this movement were in the prices of cured meats, bacon and pork ham being slightly lower. Lard advanced from an average price of 15·9 cents per pound in January to 16·7 cents in February. Egg prices were again substantially lower, declines being considerably smaller in the western provinces than in the eastern. The Dominion average price for fresh grades was down from 39·4 cents per dozen in January to 31·6 cents in February. Creamery butter averaged ½ cent per pound higher at 30·8 cents. Bread also was fractionally higher at 6·7 cents per pound, there being increases in several cities. Canned tomatoes have averaged

†The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

‡For the week ended February 26, 1937, monthly figures not yet available.

*Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

gradually higher month by month since May, 1936, the price then being 11·1 cents per tin as compared with 13 cents in February, 1937. Dry beans averaged 7·2 cents per pound as compared with 6·9 cents the previous month and 5·4 cents in February, 1936. Potatoes were considerably higher during the month in nearly all localities, the price per ninety pounds averaging $1.81 in February and $1.55 in January. The price of anthracite coal was practically unchanged in the average.

Following are the prices reported for Welsh coal, "cobbles" and "French nut"—Halifax, $15.50; Charlottetown, $12.90; Moncton, $15.50; Saint John, $14; Quebec, $13; Three Rivers, $15 and $14; Sherbrooke, $15 and $15.50; St. Hyacinthe, $13.50; Montreal, $13.25 ad $13.50; Ottawa, $15.25; Kingston, $14.50; Belleville, $15; Peterborough, $15.75; Oshawa, $14.75; Toronto, $14.50 and $14; St. Catharines, $15; Hamilton, $14.50 and $14; Brantford, $16.50; Galt, $16; St. Thomas, $16; Cobalt, $18; Timmins, $18; Port Arthur, $17.25; Fort William, $17.25; Winnipeg, $20.

Minimum Wage Orders in British Columbia respecting Apprentices.

The British Columbia Gazette of February 11, 1937, contains an Order pursuant to the terms of Male Minimum Wage Act and the Female Minimum Wage Act, providing "That all Orders made prior to the 11th day of February, 1937, shall not apply to any apprentice serving his apprenticeship under a contract of apprenticeship, pursuant to the provisions of the 'Apprenticeship Act', being chapter 3 of the Statutes of British Columbia, 1935, and all such Orders are hereby varied accordingly."

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

The following notes afford information as to recent changes in prices in Great Britain and certain other countries. Tables giving the official and certain other index numbers of cost of living, retail and wholesale prices in Great Britain and several of the principal commercial and industrial countries are included in "Prices in Canada and Other Countries, 1936" which is a supplement to the January issue of the LABOUR GAZETTE.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1930=100, was 102·9 for January, an increase of 0·8 per cent for the month. Of the food and tobacco groups, an advance of 4 per cent in cereals was partly offset by declines in the other groups. Industrial materials on the whole were 3 per cent higher with advances recorded in all of the eight groups, of which non-ferrous metals rose 6·2 per cent and wool 5·7 per cent.

The *Statist* index number, on the base 1867-1877=100, was 99·2 at the end of January, an increase of 0·6 per cent for the month. Foodstuffs as a whole were practically unchanged, advances in vegetable food and sugar, coffee and tea being practically balanced by a decline in the animal food group. Among industrial materials, textiles and sundries were higher, while minerals declined.

COST OF LIVING.—The Ministry of Labour's index number, on the base July, 1914=100, was 151 at the beginning of February, showing no change from the previous three months. A slight decrease in food prices was counteracted by slight advances in clothing and sundries prices.

France

WHOLESALE PRICES.—The General Statistical Office index number, on the base July, 1914=100, was 512 for January, an advance of 2·6 per cent for the month. Every group showed an increase over the December level.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 105·3 for January, an increase of 0·3 per cent for the month. The most notable changes for the month were increases of 7·7 per cent in non-ferrous metals and of 6·8 per cent in rubber.

COST OF LIVING.—The official index number, on the base 1913-1914=100, was 124·5 for January, an increase of 0·2 per cent for the month due to small advances in food and sundries prices.

United States

WHOLESALE PRICES.—*Dun and Bradstreet's* index number (in continuation of Bradstreet's index number) which is based on the sum total of the prices per pound of 96 articles of common use, was $11·2320 at February 1, an increase of 0·9 per cent for the month. Increases were recorded in livestock, fruits, hides and leather, textiles, oils, naval stores and building materials, and decreases in breadstuffs, provisions, metals and miscellaneous commodities.

Dun's index number, based on the cost *per capita* of a year's supply of commodities was $203·206 at February 1, a decrease of 1·6 per cent for the month, due to decreases in prices of miscellaneous commodities and of food, except meat.

National Research Council

The nineteenth annual report of the National Research Council published recently, stated that "improvement of industrial technique and the better utilization of Canada's resources in men and materials continued to be the keynote of the work carried on in the National Research Laboratories during the year ended March 31, 1936." The report contains brief reviews of the work undertaken in the several laboratory divisions and other activities of the Council. The financial statement for the fiscal year 1935-36, indicates that revenue for the year was obtained from three main sources, namely parliamentary appropriation $522,615.38; Special fund, $20,625.01; and trust fund, $115,085.94, a total of $658,326.93.

Total expenditures for the year amounted to $629,337.77, and are divided into two classes: (A) expenditures in connection with the operation of the laboratories at Ottawa; (b) expenditures in connection with the promotion of research outside these laboratories, including co-operative investigations carried on under the associate committees of the Council, assistance to individual researchers, post-graduate scholarships, and contributions to other organizations with which these laboratories have arrangements for the exchange of information.

The Workers Educational Association of Canada has recently issued its study circle pamphlet No. 1. This bulletin deals with the Rochdale plan of consumer co-operation and has been prepared by J. G. Perold, M.A., B.D., of the Department of Economics, University of Toronto.

FATAL INDUSTRIAL ACCIDENTS IN CANADA IN 1936

Analysed according to Industries, Localities and Months

An analysis of fatal industrial accidents in Canada during the calendar year 1936, by industries, causes, provinces and months is presented in the accompanying tables. The accidents recorded are those occurring to persons gainfully employed during the course, or arising out, of their employment. Also included are fatalities from industrial diseases reported chiefly by provincial workmen's compensation boards. Quarterly statements, each giving a table of accidents occurring during the period covered, appeared in the Labour Gazette for May, August and November, 1936, and February, 1937.

The record is compiled from reports from the following governmental authorities: The Board of Railway Commissioners for Canada; the Explosives Division of the Federal Department of Mines; the Workmen's Compensation Boards of Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia; the Ontario Chief Factory Inspector; the Ontario Railway and Municipal Board; and the British Columbia Department of Mines. Reports were received from the correspondents of the Labour Gazette, resident in the principal industrial centres throughout Canada.

Industrial accidents reported in the press are also included in the record after inquiry has been made to avoid duplication. Most of the accidents in agriculture are recorded from press reports, and while it is not known to what extent the accidents in this industry are covered, it is believed that in this respect the record is fairly complete. To a great extent, however, the information obtained from press reports is used to supplement information received from official sources.

Table I gives an analysis of accidents by industries and causes, Table II by provinces and Table III by months, these last two also including summary figures for 1935, which are a final revision of the figures published in the Labour Gazette, March, 1936, by the inclusion of accidents occurring in 1935 which were reported too late for incorporation into the annual statements. These accidents were included in the supplementary reports in the Labour Gazette for May, August and November, 1936, and February, 1937. The figures for 1936, being still incomplete, are accordingly to some extent not comparable with the completed figures for 1935.

In some industries where considerable changes in figures from year to year appear, these may be attributed to changes in industrial conditions or to particular occurrences. For example, in logging there was an increase in the number of fatalities from 116 to 130, and in the mining group there was an increase in metalliferous mining from 103 to 121, apparently arising out of increased employment, with relative increase in exposure to risk, while the increase from 50 to 94 in water transportation resulted largely from the sinking of three ships during the fall of 1936. Similarly the decrease from 69 to 42 in coal mining may be largely explained by the fact that there were two serious accidents in this industry in 1935.

The most serious disaster during the year under review occurred on October 17, when a sandsucker foundered and sank in a storm on Lake Erie, Ontario, and eighteen members of the crew were drowned. Findings of a special commission which was appointed to investigate into the cause of the tragedy disclosed that the loss of the vessel was due "to shifting of her cargo of sand caused by the incursion of water through her open hoppers into the hopper space, which condition became aggravated by the continued admission of water to her hoppers and possibly in her special buoyancy space, and finally resulted in her foundering." While the cause of the vessel sinking so rapidly after her cargo took a sudden list turning the vessel over on her side, remains in doubt, the responsibility for the loss of life was charged to the first and second officers who perished with the ship. They failed, the commission found, in not being sufficiently alert in obeying the master's orders to get the life boats out and the crew aboard. The captain, one of the seven survivors, as well as all other members of the crew, were exonerated from blame. The commission added however that the captain was open to censure for failing to have life boat drill aboard the vessel, and in permitting an unauthorized person, the first officer's wife, to be aboard.

Another serious disaster occurred in steam railways near Downie, British Columbia, on March 2, when a tender which had been derailed in a snowslide broke loose from a crane and crashed into a group of workers who were clearing another slide which had occurred about one mile farther down the grade. Sixteen of the men were killed and five injured when they were caught between the 15-foot snow banked walls and were crushed against the engine. A chinook wind had loosened the heavy snowfall of the past

(a) These fatalities include accidents to fishermen and seamen outside Canadian waters and such accidents are assigned to the provinces in which the various ships were registered, and exclude accidents to Canadian fishermen and seamen on boats registered in another country For quarterly reports of accidents see the LABOUR GAZETTE for May, August and November 1936, and February 1937.

(b) Revised figures for 1935.

(a) Decennial census of 1931. (b) Annual census of industry, 1934. (c) Annual census of industry, 1935. (d) Fishermen only, annual census of industry, 1935. (e) Revised figures for 1935.

(Continued from page 375)

winter, sending down numerous slides through the mountains and creating a further danger of slides and a flood threat over great territories.

While making its last run of the season, a motorship foundered and sank in a storm on Georgian Bay, Ontario, on November 21, and seven members of the crew were drowned. Ten survivors reached shore on rafts which they threw clear before leaving the ship. On November 13, a tug sank on Lake Huron, Ontario, and the whole crew of five were drowned. This accident is believed to have been caused by a boiler explosion. On June 17, six log drivers were drowned in Duparquet Lake, Northern Quebec, when a motor-driven canoe capsized in a storm. There were seven men crossing the lake in the large canoe when they were caught in the squall; but one of them managed to swim to an island. Four other loggers were drowned at Seven Sisters Falls, Manitoba, on June 13, when a motorboat capsized in swift waters while they were gathering logs. Six fishermen were drowned off Magdalen Islands, Quebec, on April 17, when their motorboat capsized in a rough sea; and three fishermen were asphyxiated from exhaust fumes in a boat off Galiano Island, British Columbia, on October 23. Three trappers were drowned in Lac Ile a-la-Crosse, Saskatchewan, on June 24, when a canoe capsized in a storm. On May 23, a pilot, a mechanic and two prospectors lost their lives in an aeroplane crash near Lake Chibougamau, Quebec. On August 15, a shift boss, a drill operator and a helper were killed when buried by a cave-on of a stope in a mine at Kirkland Lake, Ontario. Another three miners were drowned in Beresford Lake, Manitoba, on September 9, when a canoe upset. Three miners were killed when they fell 200 feet down a shaft when a platform collapsed as their drill went out of control, at Kirkland Lake, Ontario, on November 4. A conductor and two brakemen were killed in a collision of a passenger train with a work train, at Novar, Ontario, on September 16.

Fatalities by Causes

The classification of fatal accidents according to causes shows that the largest number, 345, came under the category "by moving trains, vehicles, etc." This includes all accidents due to cars or engines, including mine and quarry cars, and to automobiles and other power vehicles and horse-drawn vehicles, as well as accidents caused by moving implements (both those impelled by power and those drawn by horses), by moving watercraft and by aircraft. The largest number of accidents thus caused, 108, were in connection with watercraft (14 of these were in logging, 35 in fishing and trapping, 41 in water transportation). Also 89 were caused by persons being struck or run over by, or crushed by or between cars and engines, 62 of these being engaged on steam railways; 82 appear under the heading, automobiles and other power vehicles and implements; 26 were caused by animal-drawn vehicles and implements; 12 were due to derailments and collisions (all of which were in steam railways); 12 were caused by mine and quarry cars; 8 by persons falling from or in cars or engines; and 8 by aircraft.

"Falls of persons" caused 197 fatalities, including 75 falls into pits, shafts, harbours, rivers, etc., (some of which resulted in drowning), 54 falls from elevations, 17 falls from loads, etc., 16 due to collapse of support, 8 into holds of vessels, 8 down stairs and inclines, 7 on sharp objects, 6 from ladders, 3 due to falls on the level, and 3 into tanks. vats, kilns, etc.

Fatalities numbering 172 were caused by "falling objects", of which 54 were due to falling trees and limbs, 51 to objects falling in mines and quarries, 26 to objects falling from elevations, loads, piles, 21 to collapse of support, 10 to breaking or loosening of straps, cables, etc., and 10 to other falling objects.

Next in order as a cause came "dangerous substances", 135 in number, of which 39 were due to explosive substances, 30 to electric current, 24 to conflagrations, 17 to hot and inflammable substances and flames, 12 to steam escapes, boiler explosions, compressed air, 12 to gas fumes, etc., and 1 to mine explosions from gas, coal dust, etc.

Animals caused 33 fatalities, including 26 due to horses; and 26 were caused by hoisting apparatus. Fatalities numbering 25 were caused by striking against or being struck by objects, of which 7 were due to striking against objects, and 18 to being struck by objects. In connection with the handling of objects there were 25 fatalities, 20 caused by prime movers, 12 by working machines, and 10 by tools.

The category "other causes" includes 77 fatalities of which 6 were deaths following infection, not elsewhere specified, 23 due to industrial disease, strain, etc., 3 to drownings, not elsewhere specified, 8 to shooting and violence, 16 to cave-ins, land slides, ice jams, etc., 19 to lightning, frost, storms, sunstroke, and 2 accidents as to which no particulars were available.

Fatalities by Provinces

The classification of fatal accidents according to provinces shows that the largest number, 408, occurred in Ontario. There were 244 in Quebec, 178 in British Columbia, 72 in Nova Scotia, 55 in Manitoba, 50 in Alberta, 39 in Saskatchewan, 20 in New Brunswick, 6 in Prince Edward Island, and 2 in the Yukon and Northwest Territories. In Ontario the largest proportion of fatalities occurred in transportation and public utilities, where there were 97, with 81 in mining, non-ferrous smelting and quarrying, 47 in agriculture, 46 in manufacturing, 45 in construction, 34 in service, 27 in logging, 17 in trade, 8 in fishing and trapping, 5 in electric light and power, and 1 in unclassified. In Quebec the largest number, 63, was also in transportation and public utilities, with 31 in logging, 29 in manufacturing, 27 in service, 25 in agriculture, 21 in construction, 20 in mining, non-ferrous smelting and quarrying, 13 in trade, 9 in fishing and trapping, 5 in electric light and power, and 1 in unclassified. In British Columbia there were 59 fatalities in logging, 35 in transportation and public utilities, 27 in mining, non-ferrous smelting and quarrying, and 16 in manufacturing. In Nova Scotia, Manitoba and Alberta there were respectively 22, 10 and 12 fatalities in mining, non-ferrous smelting and quarrying, and no other industry suffered so many fatalities in these provinces. In Saskatchewan the largest number, 18, was in agriculture, and transportation and public utilities, in which there were 6, had the greatest number in New Brunswick.

Fatalities by Industries

The total number of fatalities recorded for the year was 1,074, being classified under the various groups of industries as follows: transportation and public utilities, 238, or 22·16 per cent of the total; mining non-ferrous smelting and quarrying, 173, or 16·11 per cent; logging, 130, or 12·10 per cent; agriculture, 124, or 11·54 per cent; manufacturing, 107, or 9·96 per cent; construction, 102 or 9·50 per cent; service, 87, or 8·10 per cent; fishing and trapping, 55 or 5·12 per cent; trade, 42, or 3·91 per cent; electric light and power, 12, or 1·12 per cent; finance, 2, or ·19 per cent; and unclassified, 2, or ·19 per cent.

The table of fatalities by months shows the highest point to have been reached in October, with 130 being recorded in this month, with 112 in July, 107 in June, and 106 in August. The low point for the year, 57, was reached in April. The table gives the numbers of persons gainfully employed in most of the industries, the latest census figures available being given in each case. For agriculture, logging, construction, trade, finance, service, etc., the figures were those of the decennial census of 1931, for manufacturing, from the annual census of industry for 1934, for mining, fishing, electric light and power, steam railways, street and electric railways, telegraphs and telephones, and express, from the annual census of industry for 1935.

Prior to 1932 figures had been included showing for each industry the accident frequency, that is the number of fatalities per 1,000 persons employed. While the figures as to numbers employed were not in any instance those for the year under review, it was considered that they afforded a reasonably accurate estimate for this purpose, namely, to show the accident ratio in each industry as compared with the others. In the case of 1932, 1933, 1934, 1935 and 1936, however, the difference in numbers employed has been so marked that figures for earlier years, though the latest available, do not afford even approximate estimates and frequency rates based on them would be misleading and are therefore not given. The latest figures available as to numbers employed, however, are included for general comparative purposes.

Fatal and Non-fatal Accidents in Canada recorded by Provincial Workmen's Compensation Boards

The Labour Department's records of industrial accidents include only fatal accidents and fatalities arising out of employment, that is from industrial diseases, etc. The only information of a comprehensive nature as to non-fatal accidents is from the Workmen's Compensation Boards in the various provinces, except that in manufacturing, mining, and steam and electric railway operation accidents are dealt with by various governmental departments and commissions, and these are also covered by the Workmen's Compensation Boards.

The annual reports of the several Workmen's Compensation Boards are reviewed from time to time in the LABOUR GAZETTE, information being given as to accidents, amounts paid in compensation, etc. The annual reports of the Provincial Workmen's Compensation Boards for 1935 were summarized in the following issues: New Brunswick, Nova Scotia and Saskatchewan, May, 1936, pages 416-419; Manitoba, July, 1936, pages 611-612; Ontario, August, 1936, pages 703-704; Quebec, September, 1936, page 781; British Columbia and Alberta, October, 1936, pages 908-909.

INDUSTRIAL ACCIDENTS, NON-FATAL AND FATAL IN CANADA, 1930, 1931, 1932, 1933, 1934, 1935, AND 1936, REPORTED BY PROVINCIAL WORKMEN'S COMPENSATION BOARDS

(a) Accidents requiring medical treatment but not causing disability for a sufficient period to qualify for this compensation. The period varies in the several provinces; figures not reported by some boards.
(b) Saskatchewan from July 1, 1930.
(c) Cases of "medical aid only" included only after Sept. 1, 1931.
(d) Preliminary figures. (e) Subject to further revision.

None of the provinces has jurisdiction over all industries, so that the accidents recorded are those in certain industries only. Most of the Boards deal with accidents in logging, mining, manufacturing, construction, transportation and public utilities, excluding agriculture, trapping, finance, domestic service, etc., but including to some extent fishing, trade and government service.

The accompanying table summarizes the figures as to non-fatal accidents recorded by the several Workmen's Compensation Boards for 1930, 1931, 1932, 1933, 1934, 1935 and also gives some preliminary figures for 1936. It may be observed that the Department of Labour's figures show 1,009 fatal industrial accidents as occurring during 1935, while the total number of fatal accidents which were included by the Provincial Workmen's Compensation Boards for that year was 706, these figures including none for Prince Edward Island. This difference is largely accounted for by the fact that the Provincial Boards do not include accidents in all industries. In addition, however, the Board's records include only accidents to employees, while the Labour Department's records include accidents to all persons when occupied in industry, including employers and workmen carrying on their own business, and there are many such, particularly in trucking, trade, etc., as well as in agriculture.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Judgment Against Local Officers of U.M.W.A. in Nova Scotia Affirmed

In the LABOUR GAZETTE, October, 1936, p. 970, a summary was given of a decision of Mr. Justice Hall of the Nova Scotia Supreme Court on September 5, 1936, awarding damages to the plaintiffs in an action brought by five members of the Amalgamated Mine Workers of Nova Scotia against four officers of the local union of the United Mine Workers of America at Springhill and against the district board member of the U.M.W.A.

The claim for damages was based on charges of unlawful conspiracy against the plaintiffs to prevent their employment by the Cumberland Coal and Railway Company, a subsidiary of the Dominion Coal Company, and of coercion and intimidation of the company for the same purpose.

On appeal, Mr. Justice Hall's judgment was affirmed, three members of the Court holding that the appeal should be dismissed. The Chief Justice, Sir Joseph Chisholm, and Mr. Justice Doull dissented and would have allowed the appeal.

Since 1919, the Company had been party to a collective agreement with District 26 of the U.M.W.A. The agreement did not stipulate that only members of the U.M.W.A. should be employed but most of the miners at Springhill were members of that union until 1932 when a considerable number joined the newly-formed Amalgamated Mine Workers of Nova Scotia. By January, 1935, all but a small number had returned to the U.M.W.A. and the strike was called on January 24, 1935, to induce the company to refuse employment to the five men who had been active in organizing the rival union and were still outside the U.M.W.A.

Mr. Justice Hall stated the grounds on which he considered the plaintiffs entitled to recover damages as follows:

(1) The defendants acted in combination, not with a single view to advance the interests of their union but with the main or ulterior intent to injure the plaintiffs; and

(2) They threatened to commit or procure an illegal act with the intention and effect of intimidating the officers of the company into refusing to employ the plaintiffs.

The first reason he based on the evidence as to the facts and on certain decisions of the English Courts including *Allen v. Flood* (1898) A.C. 1, *Quinn v. Leathem* (1901) A.C. 495, *Ware and de Freville Ltd. v. Motor Trade Association* (1921) 3 K.B. 40 and *Sorrell v. Smith* (1925) A.C. 700. These cases all have to do with civil liability for conspiracy to injure another. Only *Allen v. Flood* was a trade union case and the Trade Disputes Act, 1906, settled the question as far as it concerned liability for interference with employers or workmen by stipulating that no act done in contemplation or furtherance of a trade dispute shall be actionable merely because it is done in pursuance of an agreement or combination by two or more persons or on the ground that it induces some other person to break a contract of employment or that it is an interference with the trade, business or employment of some other person or with the right of some other person to dispose of his capital or his labour as he wills (ss. 1, 3.).

The second ground of Mr. Justice Hall's judgment related to the "illegal act" of withdrawing the maintenance men.

The wilful breaking of a contract knowing or having cause to believe that the probable consequence of such breach will be to expose valuable property to destruction or serious injury is an indictable offence (Criminal Code, s. 499a) and the threat to withdraw maintenance men was a threat to do an illegal act.

It is noteworthy that the trial judge and two members of the Appeal Court appeared to consider the collective agreement between the company and District 26 of the U.M.W.A. as a legal contract. Under the Trade Union Act, 1871, of the United Kingdom, a collective agreement may not be enforced by any Court. As regards the legal position of collective agreements in Canada, apart from the effect of statute law in Quebec, the judgments of the Judicial Committee of the Privy Council in *Caven v. C.P.R.* (1925) 3 D.L.R. 841 and *Young v. C.N.R.* (1931) 1 D.L.R. 645 appear to be the only ones throwing light on the matter. Mr. Justice Hall observed:

"It was also frankly stated that so long as the mines remained closed the maintenance men would continue to perform their duties but if the company attempted to work the mines with the blacklisted men the maintenance men would be withdrawn. The latter course would be a direct breach of the U.M.W.'s contract with the Company."

Section 16 of the collective agreement between the company and the U.M.W.A. reads:

In case of either local or general suspension of mining, either at the expiration of this contract or otherwise, the engineers, firemen, pumpmen, fanmen and such other maintenance men necessary to protect the mines shall not suspend work except at the option of the operator but shall fully protect all the company's property under their care... But it is understood and agreed that the operator will not ask them to hoist any coal produced by non-union labour for sale in the market.

Mr. Justice Mellish, in the appeal case, stated "the relevant facts as disclosed in the evidence," pointed out that "it is not denied that the plaintiffs had the legal right to refuse to be members of the said association" and concluded that "the defendants were an efficient agency causing wilful damage to the plaintiffs without just cause or excuse and that they are responsible in damages therefor."

Mr. Justice Ross, with whom Mr. Justice Carroll concurred, expressed agreement with the conclusion of the trial Judge—

"that the defendants acted in combination, not with a single view to advance the interests of their union, but with the main or ulterior intent to injure the plaintiffs . . . . It is suggested that there was no purpose to injure the plaintiffs apart from the desire to bring them into the United Mine Workers and that a finding to the contrary is against all the evidence. With the highest respect, I cannot agree . . . . The intention clearly expressed was that those men should be discharged from the employ of the company. Others were given a chance to join but so far as the plaintiffs were concerned there was no alternative but dismissal . . . . . It might here be said, by the way, that this was a curious observance on the part of the defendants of that term of their contract which provides that the right to hire and discharge is vested exclusively in the operator [section 6 of collective agreement] . . . . . To punish the plaintiffs and not to promote the interests of the union seemed to be the objective . . . . .

I do not see why there should be so much dubiety about the provisions of the contract covering maintenance men. Under no circumstances were they to be withdrawn during a local or general suspension of mining, only it was understood and agreed that the operators would not ask maintenance men to hoist any coal produced by non-union labour for sale in the market. Subject to that condition, the maintenance men were to remain and fully protect the company's property.

I think the appeal should be dismissed."

The Chief Justice, in expressing his dissent, stated that in the result he agreed with Mr. Justice Doull that the appeal should be allowed. He considered that

The compelling reason for the employer's refusal to give the plaintiffs their lamps was the loss the stoppage of work was causing the owners of the colliery . . . . . This and not any threat, if threat in fact was made, was why the plaintiffs were refused work.

Mr. Justice Doull held—

That there was any purpose of injuring them apart from the desire to bring them into the United Mine Workers which was in my opinion a legitimate purpose, seems to me to be against all the evidence. . . . . let us look at the acts which are alleged as indications of a purpose to injure the plaintiffs.

The first is the picketing. There is no doubt that the association agreed to picket the mine. For what purpose? Certainly not to keep out these five men or twelve men or even seventy men. It takes a force of 1,230 men to operate these mines and any of these men might go into the mine but would be certain to be sent home. The picket was for the purposes: 1. To see what would happen,—whether the resolution to stop until the plaintiffs and their associates would come in would be effective; 2. to keep check on the United Mine Workers' men and see that they were carrying out orders and to no doubt persuade any others to remain away from work.

Another point remains. The defendants are liable if they adopt illegal means to carry out their purpose even assuming the purpose to be in itself a legal one. The illegal method charged is the alleged threat to call out the maintenance men. Threats in order to come within this category must be threats to do what the defendants had no right to do. Their contract with the company was that maintenance men were not to be withdrawn in the case of a tie-up under certain conditions, and I have no doubt that a threat to break a contract would be within the class of illegal means.

The discussion was as to whether the maintenance men would under this clause be justified in coming out, if coal were being produced by those who were not members of their union. Even if they gave the manager to understand that if he was taking out coal with non-union labour the maintenance men would be withdrawn, it would be at least arguable that they would be within their contract. McLeod knew this perfectly. He does not indicate that the men ever threatened to break their contract. It seems to me also that on January 28, the matter was purely an academic question. There were clearly at that time not enough men out of the U.M.W. to operate the mine. If there were enough to operate the mine, the difficulty about getting maintenance men would not be a very serious one . . . . . I can gather from the evidence no threat to break the contract.

Johnston et al v. Mackey et al (1937) 1 Dominion Law Reports, 108 and 443.

THE LABOUR GAZETTE

PREPARED AND EDITED BY

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 37] APRIL, 1937 [NUMBER 4

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

A CONTRACTION in employment was recorded at the beginning of March, according to returns received by the Dominion Bureau of Statistics from 9,988 employers of labour, each with a minimum of fifteen employees, and representative of all industries except agriculture, fishing, hunting and highly specialized business. The working forces of these firms aggregated 975,862 persons, as compared with 987,879 in the preceding month. This decline was mainly due to unusually large seasonal reductions in logging operations, for which weather conditions in some localities and industries have recently been unfavourable, hastening the closing of the camps. The index number (based on the 1926 average as 100) stood at 102·8, as compared with 104·1 in the preceding month, while at March 1 in the last sixteen years it was as follows:—1936, 98·9; 1935, 96·4; 1934, 92·7; 1933, 76·9; 1932, 88·7; 1931, 100·2; 1930, 110·2; 1929, 111·4; 1928, 102·6; 1927, 97·5; 1926, 92·6; 1925, 88·1; 1924, 91·8; 1923, 91·0; 1922, 82·9 and 1921, 89·1.

At the beginning of March, 1937, reports were forwarded to the Department of Labour by 1,841 local Trade Unions involving a total of 190,018 members. Of these, 26,001 were registered as idle, a percentage of 13·7 as contrasted with percentages of 14·5 at the beginning of February, 1937, and 13·8 at the beginning of March, 1936.

Reports received by the Department of Labour from the offices of the Employment Service of Canada showed a decline in the volume of business transacted during February, 1937, when the average daily placements were compared with those of the preceding month, but a slight gain over that of February a year ago. Total placements for the month under review, however, were slightly less than in February, 1936, as there was one less working day. The highest losses under the first comparison were recorded in farming and construction and maintenance, and in the second instance in construction and maintenance, with a substantial gain noted in logging. Vacancies in February, 1937, numbered 24,840, applications 48,787 and placements in regular and casual employment 23,230.

In retail prices the cost per week of a family budget of staple foods, fuel and lighting, and rent was practically unchanged at $17.13 at the beginning of March as compared with $17.12 for February; $16.63 for March, 1936; $16.10 for March, 1935; $15.41 for June, 1933 (the low point in recent years); and $21.96 for March, 1930. In wholesale prices the weekly index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 advanced week by week during March, being 86·3 for the week ended March 26 as compared with 83·0 for the week ended February 26. The advance was due in the main to higher prices for grains, iron and steel products, lumber and non-ferrous metals. On a monthly basis the index number was 82·9 for February, 1937; 72·4 for March, 1936; 71·9 for March, 1935; 63·5 for February, 1933 (the low point in recent years); and 91·8 for March, 1930.

The latest available information reflecting industrial conditions in Canada is given in the table on page 390. The index of the physical volume of business in February was about one and one-half per cent lower than in the previous month but almost ten per cent higher than in February, 1936. Of the principal groups of factors used in the construction of the index the greatest advance during the month under review as compared with January was in mineral production, due to increased exports of copper, nickel and asbestos, to greater imports of bauxite and to increased shipments of gold and silver. The other groups to show increases in the same comparison were construction and electric power output. Manufacturing, trade employment, carloadings, imports and exports were lower. All of these principal groups were higher in February, 1937, than in February a year ago. Information for March shows advance in wholesale prices, carloadings, contracts awarded and in sugar manufactured, both as compared with the preceding month and with March, 1936. Employment was somewhat lower than in February but higher than in March, 1936.

*Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

†For the week ended March 26, 1937.

(1) Calculated from yields of Canadian bonds. (2) For group figures see articles elsewhere in this issue.

(3) Adjusted for number of business days and seasonal variations.

(4) Figures for end of previous month.

(5) Figures for four weeks ending March 27, 1937, and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending March 27, February 27 and January 30, 1937; March 21, February 22, and January 25, 1936.

(7) MacLean's Building Review.

(8) Index numbers are adjusted when necessary for seasonal variation.

The number of strikes and lockouts recorded for March was 21, involving 5,382 workers, with a time loss of 37,088 man working days as compared with 19 disputes in February, involving 2,404 workers and a time loss of 19,346 days. The most important disputes during March involved furniture factory workers in several establishments in Ontario, cotton textile factory workers at Sherbrooke, P.Q., and woollen factory workers at St. Johns, P.Q. A strike of foundry workers at Point Edward, near Sarnia, Ont., led to a serious disturbance but did not cause much time loss. In March, 1936, there were 15 disputes, involving 2,872 workers with a time loss of 17,144 days, the more important disputes involving loggers in Vancouver Island, B.C., shoe factory workers at London, Ont., and leather handbag workers at Toronto, Ont. Of the twenty-one disputes recorded for March, fourteen were recorded as terminated, three resulting in favour of the employers affected, three in favour of the workers involved, compromise settlements being reached in seven cases, while the result of one dispute was partially successful. Seven disputes, involving approximately 1,370 workers, were recorded as unterminated at the end of the month. These figures do not include those strikes and lockouts in which employment conditions were not longer affected but which had not been called off or definitely declared terminated by the unions involved.

"Sit-Down" strike declared illegal in Canada

The advent of what is known as the "sit-down" strike in the United States and the possibility of the extension of such tactics in Canada, has resulted in declarations of its illegality by Canadian authorities.

This form of strike action in the United States has been utilized by organizations connected with the Committee for Industrial Organization, headed by Mr. John L. Lewis, in its campaign to organize workers in the mass production industries. (The formation of the Committee for Industrial Organization and the subsequent suspension of its component unions from the American Federation of Labour was reviewed in the Labour Gazette for December, 1935, page 1088, and August, 1936, page 680.)

Replying to a question in the House of Commons on March 24, Hon. Ernest Lapointe, Minister of Justice, made the following statement regarding "sit-down" strikes:—

"A 'sit-down strike,' so-called, is, I understand, instituted and carried out by the employees of a factory or other industrial or commercial concern, who, having entered the premises legally in connection with their work, illegally remain and take possession of such premises and hold same by physical force against the owners and employers. A sit-down strike in Canada would be entirely illegal, and would not only tend to undermine all respect for law and order, but would, if proceeded with on any large scale, likely disrupt the business and administration of the country. Such a sit-down strike would also likely tend to create a riot and public disorder, which is contrary to the views of organized labour in this country. Legitimate means of redressing grievances already exist in Canada.

"The sit-down strike shall not be permitted to obtain any footing here. The administration of justice is of course committed to the provincial authorities and they are exclusively responsible for it. But the Dominion Government is prepared to utilize all the resources and agencies at its command and to the extent of its legal powers to the end of restraining and eliminating this illegal mode of procedure in Canada."

In the Ontario Legislature, Hon. Mitchell Hepburn, Premier of the Province, made a strong pronouncement against "sit-down" strikes, declaring that those who participate in such are trespassing, which is illegal.

On March 5, Magistrate O. S. Woodrow of Sarnia, in imposing a fine on one, and suspending sentence on fifty-five other persons found guilty on charges of trespassing at a Point Edward foundry, said: "Let it be known from this Bench that we will not countenance in any way the adoption of such means of remedying grievances if grievances exist."

Mr. Justice A. C. Kingstone, in an address to the grand jury, opening an Ontario Supreme Court session, described sit-down strikes as "absolutely illegal" and added that such action would not be tolerated in Canada.

In only two instances have determined efforts been made to apply the tactics of the "sit-down" strike in Canada, and in both cases they were unsuccessful. There have been, however, a few cases where strikers remained in their work places until warned to leave the same day. One of the latter included a dispute in a wheel factory at Windsor, Ont., in December, 1936, where the police were called and escorted the strikers out of the plant. (Labour Gazette, January, 1937, page 19). As recorded on page 410 of this issue, striking foundry workers at Point Edward (Sarnia) were forcibly ejected from the plant by other employees. At Calgary, meat packers on strike remained in the plant for seven days, but on police warrants were arrested and appeared in court on charges of "forcible detention of property," etc (Labour Gazette, March, 1937, page 300).

Industrial Disputes Investigation Act

During the past month the major event in the Canadian industrial situation was the settlement of the railway dispute involving approximately 117,000 workers. When a deadlock occurred on March 25, direct negotiations were resumed between the railway companies and representatives of the union as a result of the intervention of the Minister of Labour, Hon. Norman McL. Rogers. Within forty-eight hours, there resulted the amicable adjustment of the chief matter at issue—the restoration of the wage deduction. The steps leading up to the negotiations and the settlement are dealt with in an article on page 401.

The findings of the Board of Conciliation and Investigation established in connection with the dispute between the London Street Railway Company and its employees are given in the section commencing on page 396.

Other proceedings included the establishment of one Board, and the withdrawal of an application for the establishment of a Board in another case.

Canadian Delegation at World Textile Conference

A representative Canadian delegation was in attendance at a world conference of the textile industry which on April 2 commenced its sessions in Washington on the invitation of the United States President, Franklin D. Roosevelt. The terms of reference of the conference, which was convened by the Governing Body of the International Labour Organization, included the examination of "all those aspects of the textile industry which, directly or indirectly, may have a bearing on the improvement of social conditions in that industry." Each of the participating States (the principal textile manufacturing countries of the world) was represented on a tri-partite basis—government, employers and employees. This conference represents the first attempt which has been made by the International Labour Organization to review the general situation of a world-wide industry in order to explore the possibility of improving its social standards as determined by wages, hours of labour and working conditions.

The Canadian delegation was as follows:—

Representing the Government of Canada—Mr. Gerald H. Brown, Assistant Deputy Minister of Labour, Ottawa; advisers to the Government representative—Mr. J. F. Marsh, Deputy Minister of Labour for province of Ontario, Toronto; Mr. Gerard Tremblay, Deputy Minister of Labour for province of Quebec, Quebec; Mr. Alfred Charpentier, President, Confederation of Catholic Workers of Canada, Montreal; Mr. A. S. Whiteley, Secretary, Royal Commission on the Textile Industry, Ottawa.

Representing the Employers of Canada—Mr. H. G. Smith, Chairman of the Board of Directors, Mercury Mills, Ltd., Hamilton, and past president of the Canadian Woollens and Knit Goods Manufacturers' Association; advisers to employers' rapresentative—Mr. Jackson H. Marx, President, Associated Textiles of Canada, Ltd., and President of the Silk Association of Canada, Montreal; Mr. A. V. Young, President and General Manager, Hamilton Cotton Co., Ltd., Hamilton, and President of the Cotton Textile Institute; Mr. Douglas Hallam, Secretary, Primary Textiles Institute, Toronto, Ont.

Representing the Workers of Canada—Mr. P. M. Draper, President, Trades and Labour Congress of Canada, Ottawa; advisers to the workers' representative—Mr. Alphonse Morrissette, President of Local No. 2647, United Textile Workers of America, and Financial Secretary, Trades and Labour Council, Three Rivers; Mr. Alexander Welch, member of Local Union No. 2495, United Textile Workers of America, Toronto; Mr. Arthur Laverty, President of Local Union No. 2499, United Textile Workers of America, Cornwall.

A complete report of the proceedings of the conference will be given in the May issue.

Quebec legislation against Communism

An Act "to protect the province against communistic propaganda" has been passed by the Legislature of Quebec. The Bill, as introduced, makes it "illegal for any person, who possesses or occupies a house within the province, to use it or allow any person to make use of it to propagate communism or bolshevism by any means whatsoever."

The Attorney General is empowered upon satisfactory proof of the utilization of any such premises to propagate communism to order the closing of the house for a period of one year. An explanatory note in the Bill indicates that "the owner or his legal representatives may, however, have the closing order suspended upon proving ignorance of the house being used for such purpose, and by guaranteeing, by means of security, that it will not be again so used."

Similarly, the owner may obtain the cancellation of the closing order by proving that "the house has not been used in contravention of this Act during the twelve months preceding the closing order."

In addition, the Bill specifically provides that "it shall be unlawful to print, to publish in any manner whatsoever, or to distribute

in the province any newspaper, periodical, pamphlet, circular, document or writing whatsoever propagating or tending to propagate communism or bolshevism."

Protection for Alberta trade unions

Designed to give workers of Alberta greater protection in their trade unions, and the right of collective bargaining, a measure known as "the Freedom of Trade Union Association Act" was introduced recently in the Provincial Legislature.

Under this proposed Act, employers including the management and directors of a corporation, are prohibited from interfering with the rights of workers to organize or join trade unions. Penalties are provided for violation of the Act, a fine not exceeding $100 or a term of 30 days' imprisonment for any employer who by threats or dismissal attempts to prevent employees from becoming trade union members.

Wage increases in Nova Scotia steel and coal industries

A recent press despatch states that General Superintendent J. H. Fraser of the Dominion Steel and Coal Corporation had announced a 7½ per cent wage increase, retroactive from April 1, 1937, to all employees of the company and its subsidiary companies in Eastern Canada and Newfoundland.

It was also stated that officials of the Dominion Coal Company, a subsidiary of the Dominion Steel and Coal Corporation, and officers of the United Mine Workers Union had signed a new wage agreement for two years retroactive from February 1, 1937. The new agreement, covering approximately 10,000 miners in Cape Breton and Cumberland Counties in Nova Scotia, gives workers earning $4 a day or less a nine per cent increase and other men, including contract miners, a six per cent raise.

Law of picketing in Canada

"The Law of Picketing in Canada" is the title of an article, the first part of which appears in the University of Toronto Law Journal, Volume II, No. 1, issued in February, 1937. The Journal is published once a year and the concluding part of the article will be in the issue for February, 1938.

The author, Professor J. Finkelman of the Law Faculty of the University of Toronto, devotes some thirty pages to a short history of the law in England and the legislation in Canada and a detailed analysis of Section 501 of the Criminal Code of Canada with reference to the leading English cases on picketing and certain Canadian decisions. Part II of the article is to be devoted to the civil aspect of the law affecting picketing.

Annual report of Canadian National Railways

On March 15, the annual report of the Canadian National Railway System for the year ending December 31, 1936, was tabled in the House of Commons by the Hon. C. D. Howe, Minister of Transport. The report shows that operating expenses during 1936 were $171,477,690.07 and operating revenues amounted to $186,610,489.38, leaving a net revenue of $15,132,799.31. After providing for interest on funded debt amounting to $49,184,622.87 and taxes, rentals and other cash requirements of $8,723,888.05, and interest on Government loans of $527,682.21, the cash deficit was $43,303,393.82 compared with $47,421,464.80 in the previous year.

According to the report, the average number of employes in service during the year 1936 was 78,836 as compared with 75,053 in 1935, an increase of 3,783, or 5·04 per cent. The total payroll expense for 1936 was $111,221,129 as compared with $104,861,521 in 1935, an increase of $6,359,609. These figures do not include employees and their compensation engaged under the special unemployment relief arrangement with the Dominion Government.

Under the various pension plans in effect on the Canadian National Railway System, 834 employees were retired during the year; pensioners deceased during the year numbered 410; and the number on pension at December 31, 1936, totalled 6,292 to whom $3,946,110 was paid, compared with $3,381,072 in 1935. The report shows that out of every operating revenue dollar, nearly 55 cents went to labour, while fuel amounted to almost ·09 cents, other expenses ·28 cents and taxes and other accounts ·08 cents.

In co-operation with the Dominion Government arrangements were made by the Canadian National Railway to provide employment of about 5,000 men from relief camps during the summer months of 1936. In addition to this number, the report states that upwards of 1,000 men were employed by the railway in connection with the relief program. The work undertaken consisted of maintenance and betterment work usually performed by extra gangs but did not reduce the normal seasonal program of such work which was somewhat in excess of that in 1935. The Government assumed the charges for wages and transportation of the relief workers amounting to $1,324,344, and the railway assumed the charges for supervision, timekeeping, train service and the conversion of equipment units into boarding and sleeping cars amounting to

$1,136,000. Of this amount, $1,015,000 was maintenance expense, the balance capital. The report concludes this section with a statement that "the plan was beneficial to the railway and assisted the Government in dealing with the difficult problem of unemployment."

Annual reports of the Canadian National (West Indies) Steamships and the Canadian Merchant Marine were also tabled by the Minister of Transport.

Supreme Court of United States sustains Railway Labour Act and minimum wage legislation

In a unanimous decision given on March 29, the United States Supreme Court upheld the provisions of the Railway Labour Act. This decision was delivered in a case concerning the Virginian Railway Company and a group of its employees. The Railway Labour Act provided for arbitration of disputes by a series of adjustment boards for the purpose of collective bargaining upon wages and conditions of Labour (Labour Gazette, July, 1934, page 655, and August, 1926, page 792).

In another decision, delivered on the same day, the right of States to prescribe minimum wages for women was upheld when the Court sustained the constitutionality of the Washington State minimum wage legislation.

By this decision the Supreme Court changed its position on this issue. In 1923, it invalidated the District of Columbia Minimum Wage Law (Labour Gazette, May, 1923, page 461) and in 1936 it declared unconstitutional the minimum wage legislation of New York State (Labour Gazette, June, 1936, page 480).

U.S. National Labour Relations Act sustained.

Since the above was written, the United States Supreme Court on April 12 upheld the constitutionality of the National Labour Relations (Wagner) Act in four cases by a vote of 5 to 4 and unanimously in a fifth. The five cases came to the Supreme Court on appeals from rulings of the National Labour Relations Board, set up by the Act. All grew out of the discharges of employees who had been active in labour organizations.

The National Labour Relations Act (Labour Gazette, April, 1935, page 343) guarantees workers the right to organize and bargain collectively with their employers through representatives of their own choosing. It forbids employers to interfere with, restrain or coerce employees in the exercise of that right. Employers also are forbidden to dominate any labour organization or contribute financial or other support to it. The act further states that it shall be unfair for an employer to encourage or discourage union membership by any condition of employment, or to discharge or otherwise discriminate against an employee because he files charges or gives testimony under the act.

The National Labour Relations Board, established by the act, is empowered to conduct elections among employees when a dispute arises as to which of two or more labour organizations represents a majority of the employees.

Railway Employees' Pensions in the United States

In the Labour Gazette for July, 1934, page 655, reference was made to the passing of an Act by the United States Congress to provide a retirement pension system for railroad employees. This measure was declared unconstitutional by the United States Supreme Court in May, 1935 (Labour Gazette, June, 1935, page 511). In August, 1935, Congress passed a new Rail Pension Law (Labour Gazette, June, 1936, page 505) providing for a contribution of 3½ per cent of railway payrolls by employers and an equal contribution by the railway employees. In June, 1936, this enactment was also declared unconstitutional by the Supreme Court of the District of Columbia. On the suggestion of the President of the United States, representatives of the railroads and the employees agreed to confer on the subject, and it was announced recently that a voluntary agreement covering pensions had been arrived at between the two parties.

The agreement, which will affect 1,500,000 railway workers, after Congress enacts legislation to validate the arrangement, provides for a total tax of 5 per cent of the payroll (of all salaries up to $300 a month for any one worker) to be equally borne by employer and employee. The tax will increase by gradual stages until it reaches 7 per cent in 1949. This levy will be paid into, and all annuities under the plan will be paid out of, the United States Treasury. Administered by the Railway Retirement Board, this plan provides that any employee is eligible to retire voluntarily upon attaining the age of 65 years, but may retire at 60 after completing 30 years of service, with a reduction in the annuity at the rate of one-fifteenth for each year under 65. A maximum pension of $120 a month is provided, and a minimum annuity for persons who have had at least 20 years of service, this minimum being related to the monthly compensation according to a graduated scale of percentages. In no event, however, can the annuity be less than the old-age benefit that the employee would receive under the Socital Security Act.

Death benefits to families of employees who die before retirement; retirement because of disability; annuities for pensioners' widows and the taking over by the government of all pension rolls now maintained by railways are also provided for in the agreement.

Skilled labour shortage foreseen in United States metal industry

In a supplement to its service letter of March 18, 1937, the National Industrial Conference Board of the United States deals with the possibility of a shortage of skilled labour. The article discusses whether a shortage of labour can exist in the United States wtih unemployment still measured in millions. "Many employers" it is stated, "particularly in the metal-manufacturing industries, insist that it is impossible to secure the number of qualified craftsmen that they require. Organized labour contends that there cannot be a shortage of skilled labour in the mechanical trades, because many of the members of unions covering these trades are unable to find work."

The study then discusses what constitutes a shortage of labour and concludes that a scarcity of labour is determined by "the availability for employment of specific types of labour in establishments seeking such labour."

The most important contributing cause of the shortage of skilled labour, it was considered, "was the suspension, during the depression, of most company training programs. Since it is conservatively estimated that 5 per cent of the skilled labour of the country withdraws from service each year because of death or obsolescence, practically 25 per cent of the skilled labour reserve was permanently lost during the depression, while very few replacements were being trained." In tables accompanying the article a shortage of 7,158 skilled workmen is reported by 404 metal working establishments surveyed, while only a shortage of 201 workmen was shown in 55 non-metal working industries such as leather, lumber, public utilities, rubber, etc.

The study concludes that there is "little doubt but what the scarcity of highly skilled craftsmen is becoming more acutely felt in the metal-working industries. In some cases only a few additional men are needed. In other cases the operation of another shift is made impossible by the lack of skilled labour to man the shift. It is encouraging, however, to note that industry on a wider scale than heretofore is taking steps to train men for the needs of the future, and while the effects of this increase in training programs will not be immediately apparent, it is at least reassuring to know that a movement is under way to prevent the problem of labour shortage from becoming progressively more serious."

Federal housing and repair activities in U.S.A.

The third annual report of the Federal Housing Administration of the United States, for the year ending December 31, 1936, states that the gross business transacted in three years by that organization totalled $1,350,157,149, including mortgages selected for appraisal, commitments to insure large-scale housing projects, and modernization and repair notes insured. Approximately $810,000,000 of this total sum was transacted during the year 1936. Modernization and repair notes numbering 1,326,102 amounting to $500,220,642 were insured up to January 1, 1937. Of this amount, $246,149,913 were insured during 1936, a gain of 10 per cent over 1935. The report also states that in addition, it is estimated that the better-housing campaign sponsored by the Federal Housing Administration has generated over $2,000,000,000 worth of modernization and repair work which does not show in its own records. Careful check-ups have disclosed that for every dollar of repair work insured by the Federal Housing Administration approximately $4 have been spent on jobs paid for in cash or financed by other methods.

The entire program of the Federal Housing Administration, it is estimated, has created the equivalent of at least 1 year's work for 2,000,000 men. In many localities, where formerly there was much unemployment among building workers, shortages of skilled labour are now being reported.

Codes in Alberta

In the article on Codes in Alberta on page 317 of the Labour Gazette for March, 1937, an error was made in the statement relating to the decision of an Edmonton magistrate regarding the Commercial Printing Code. It was stated that the order in council was invalid because no date had been specified for bringing the Code into effect. This was not the reason for the magistrate's decision. He stated that the order in council merely "approved" the Code and did not expressly declare that it should be in effect, as required by the Department of Trade and Industry Act.

According to a press despatch from Washington, the Social Security Board of the United States recently paid the first claims for old age benefits under the Social Security Act. The Board expects about 314,000 claims for Federal old age benefits during 1937.

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

DURING the month of March a Board of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act was established by the Minister of Labour to deal with a dispute between the Canadian Marconi Company and certain of its employees being coast station telegraphers, ships' telegraphers and trans-oceanic telegraphers, members of the Canadian Marconi System Division No. 59, Commercial Telegraphers Union. The personnel of the Board is as follows,—Mr. H. H. Ward, Ottawa, Ontario, chairman, appointed on the joint recommendation of the other board members, Mr. F. Curzon Dobell, Montreal, P.Q., nominated by the company, and Mr. Thomas Taylor, Toronto, Ontario, nominated by the employees. Two hundred employees are stated to be directly affected by this dispute. They seek revision of the wage agreements (marine and trans-oceanic) entered into in 1929; also changes in certain operating practices.

It was reported in the Labour Gazette for August, 1936 (page 682) that an application for the establishment of a Conciliation Board had been received from certain employees of the Winnipeg Electric Company being trackmen, members of the Winnipeg Electric Trackmen's Unit, One Big Union. The dispute related to the interpretation of the seniority clause of the agreement, the men claiming that the company, in refusing to re-employ certain men who had less than six months' service, had violated the seniority clause. The company pointed out, however, that the wage agreement applies only to men who have attained seniority, and that no employee attains seniority until he has worked six months either continuously, or continuously barring such interruption as may be caused by lay-off resulting from lack of work. The men have now withdrawn the application, stating that the question will be taken up with the company when the agreement is next revised.

The proceedings leading up to the settlement of the wage dispute between the Canadian National Railways and Canadian Pacific Railway and various classes of their employees is given on page 401.

Report of Board in Dispute between the London Street Railway Company and its Employees

The findings of the Board of Conciliation and Investigation established to deal with a dispute between the London Street Railway Company and certain of its employees were received in the Department of Labour on April 7. The dispute related to the request of the employees, 180 in number, for restoration of the 10 cents by which their hourly wage rates had been reduced, and for one week's holidays with pay each year. The personnel of the Board was as follows,—Mr. H. H. Ward, Ottawa, Ontario, chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other Board members, Mr. F. J. White, London, Ontario, nominated by the company, and Mr. Fred Bancroft, Oakville, Ontario, nominated by the men. The report was signed by the chairman and Mr. Bancroft. Mr. White submitted a minority report. The texts of these reports are given below:—

Report of Board

In the matter of a dispute between the London Street Railway Company (Employers), and certain of its employees being motormen, conductors, bus operators, shopmen, barnmen, trackmen, etc., members of Division No. 741, Amalgamated Association of Street and Electric Railway Employees of America, (Employees).

To the Honourable Minister of Labour,
Ottawa, Ont.

Sir,—The Board of Conciliation and Investigation appointed by you under the terms of the Industrial Disputes Investigation Act, commenced its sittings in London, Ontario, on March 15th, 1937. The first sitting of the Board was taken up by the members of the Board in discussing the terms of the reference and the procedure to be adopted at the inquiry; taking oaths of office and arrang-

ing suitable accommodation in the Federal Building in London for the hearing of evidence and for holding conferences, and arranging with the parties to the dispute to commence the hearings on the following day.

Since that date a number of sittings of the Board have taken place. It was found at one stage in the proceedings that it was necessary to adjourn for a time. During the inquiry discussions occurred between the parties to the reference and the members of the Board in an effort to bring the participants in the dispute to a settlement, and one conference was held between the representatives of both parties, and in addition the President of the Company, to see if it was possible to reach an agreement in the matter.

From the outset the members of the Board made every effort to bring the parties together, repeatedly suggesting conferences for this purpose. The Board succeeded in bringing the parties into conference with this object in view, but eventually found that the parties could not agree and that it would be necessary for the Board to make a report and recommendations.

On the morning of March 16th, 1937, in the Federal Building in London, Ont., the Board called the parties together and informed them of the nature of the inquiry and proceeded under the terms of the reference. The following representatives appeared before the Board:—

For the London Street Railway Company: Mr. Leonard Tait, Manager and Secretary-Treasurer, and Mr. P. J. W. Glasgow, representing the President of the Company, Mr. R. J. Ivey.

For the Employees: Mr. James B. Axford, President, Division 741, Amalgamated Association of Street and Electric Railway Employees of America; Mr. Lewis Parker, Financial Secretary of Division 741, and Mr. Magnus Sinclair, International Officer, member of the General Executive Board of the Amalgamated Association.

The items in the dispute are clearly stated in the reference as the following quotation will indicate:—

> "The present demands are that these reductions shall be restored, namely, 10 cents per hour, and that such restoration shall be retroactive and take effect as of date October 1st, 1936. Demands are also made by the employees that they be given one week's holiday with pay each year. Attached hereto are copies of agreements of working conditions, none of which are in controversy save only as stated above."

There are three items to the dispute, namely:—

(1) The restoration of a reduction of wages of 10 cents per hour made in stages during 1931 and 1932.

(2) The request that such restoration shall be dated back to October 1st, 1936.

(3) The request of the employees for a week's holiday each year with pay.

The working conditions are set out in detail in agreements in existence dating back to 1929 and 1930, and these conditions with the present practice of working conditions are not in dispute, and both parties to this controversy agreed in this respect. These agreements, two in number, are attached to this report. Both sides agreed that the statement in the reference was correct, that the only items in dispute are the three items mentioned in this report.

Since the year 1931 the parties herein involved could not agree upon the wage reductions, the employees taking the cuts under protest. So that the working conditions outlined in the documents attached to this report are mutually satisfactory and there was no suggestion that they should be disturbed. With this in mind the members of the Board endeavoured, during the early part of the proceedings, to try and bring the parties together on wages particularly, in the hope, that if this was accomplished it might not be difficult to arrange the other two items between the parties, and then the whole agreement could be signed. The early discussions at the hearings were quite informal, each side stating its case plainly without going into the nature of formal evidence. When it was found that an agreement could not be obtained at this stage more formal evidence was presented and a great deal of information was given by both sides and many exhibits filed.

The financial history of the company was outlined, the terms of the franchise as far back as 1875 discussed, and the changing conditions of transportation. Losses in revenues from the peak earnings and the nature of the recovery from the low point in the depression surveyed, as well as revenues and operating expenses of the company over a period of many years. Comparative wage scales of the classes of employees involved in Canada and the United States were also presented. With the filing of the very extensive exhibits, the members of the Board were supplied with a great deal of information upon which their judgment might be guided.

The employees presented evidence to show that the company ought to restore the reduction—in their opinion—because the wage rate of 45 cents per hour for operators was quite low when compared with other street railways in Ontario and Canada, and produced a great many figures to support their statement.

The representatives of the company stated that they were not going to question the figures submitted by the men relative to wages, and rested their case largely on what they termed "inability to pay". And to support this statement they filed statements to show their position in this respect. They also presented statements to show the annual earnings of the employees during the year 1936.

Both sides presented their arguments with care and keenness, but the obviously friendly relations of the employees and the management were not disturbed at any time. The employees' representatives stated that they were willing at all times to negotiate in a "conciliatory and give and take spirit". The representatives of the company in their final position indicated that they preferred to leave the matter to the Board, and consider the recommendations of the Board when the award was made. Under these circumstances it became the duty of the Board to make its report at once.

The members of the Board endeavoured to reach a unanimous award, but the absence of the signature of one of our colleagues will attest that this was not attainable.

It seems from the evidence, that the employees have had a cut in wages of 10 cents per hour since 1932, and that in 1931 the cut amounted to 5 cents per hour. This was reached in the two years mentioned in four stages. The hourly rate of wages was cut from 55 cents per hour for one-man car or bus operator to 45 cents per hour. At the present time, the hourly rate is 45 cents per hour for one-man car and bus operators. All the operators are now in this one-man operator class. The employees, comparing this class of service with a great many places in Canada and the United States, mentioned such places in Ontario as Hamilton, where this class of employee is paid 58 cents per hour, Windsor, where 58 cents per hour is paid, Toronto, with 65 cents per hour, and Ottawa, with 54 cents per hour, as amongst the comparisons. And they also mentioned that a Board of Conciliation in 1932 by a majority award had declared that the wage rate then should be 50 cents an hour in London, Ont., but the cut to 45 cents per hour was imposed. In addition the cost of living was thoroughly gone into, to show the comparison between these places and London, and the men claimed that, generally speaking, the cost of living in London, when measured by the Department of Labour's measuring stick, was as high or higher than any of the cities mentioned above.

The representatives of the company didn't challenge these statements. They largely confined themselves to pointing out the company's inability to pay any increase in wages at the present time. They stated very definitely that their inability to raise new capital made it imperative, that they had to get the money on which to proceed with the business out of earnings. They did not hesitate to agree to the position, that the London Street Railway Company had followed a plan, during at least the last five or six years, of gradually transforming the street car system to a system largely operated by buses. The company's representatives informed the Board that "30 per cent of the service is given by street cars, securing approximately 40 per cent of the revenues, while 70 per cent of the service is performed by small capacity buses, securing about 60 per cent of the revenues". And the representatives of the company were quite frank in stating, that during the transformation and the acquiring of new equipment of every kind that not one dollar of new capital had been obtained, but that the money required was obtained from the earnings of the company. Further the representatives of the company intimated before the Board that they would not argue that the wages being paid were enough. The great obstacle, in their opinion, was inability to pay. The distribution of the company's earnings was carefully inquired into by the Board as far as the annual reports were concerned.

Taking everything into consideration, including all the claims of the company, and the claims of the employees; after a careful survey of the history of his situation, particularly since 1931 when the wage cuts commenced, and giving careful consideration to all the exhibits filed by both sides, and the evidence given, and the improved condition of the company since the turn upward from the low point in the depression it does seem to the members of the Board that, at this time, consideration should be given to the reduced wages of those who have served the company so loyally through trying times, and that the point has been reached when the employees' wages should be considered as well as the plan of transforming the physical assets of the company, which the members of the Board had the pleasure of inspecting.

Therefore, we recommend, award and report as follows:—

Items 1 and 2.

That the 10 cents per hour reduction be restored, and the wage rates of all employees involved in this dispute be restored accordingly commencing March 31st, 1937.

Item 3.

That the request for a week's holiday with pay should be given consideration by the company with a view to working out a plan whereby holidays with pay can be given to the employees. And that the plan of the last several years of providing holidays with pay to some employees should be developed until all employees come within its scope.

Should the terms of this award be acceptable, the two agreements covering working conditions which are in existence at present, dating back to 1929 and 1930, should be completed to include the recommendations as above which cover the only items in dispute. These two agreements which reflect the conditions not in dispute are attached to this report.

Mr. White will submit a minority report.

Respectfully submitted,

(Sgd.) H. H. WARD,
Chairman.

(Sgd.) FRED BANCROFT,
Member.

London, Ont., April 6th, 1937.

Minority Report

Re Conciliation Board, to which has been referred the dispute between the London Street Railway Company and certain of the Employees of that Company

To The Honourable the Minister of Labour,
Ottawa, Ontario.

Sir,—1. While agreeing in part with the report dated April 6th, 1937, and signed by my colleagues of the Board, I regret that I must dissent from the recommendation dealing with the wage rates per hour.

2. The Company appears to have made every effort to economize. Managerial and office expenses are low, and no method was pointed out by which expenses can be further reduced without interfering with the services rendered by the Company to the public.

3. While the Company's representative agreed that no new capital had been raised to transform the street car system into a joint street car and bus system, it was clearly stated that the funds for financing necessary improvements came from the yearly earned net income, which had been properly allocated to depreciation reserve.

The Company's representative clearly outlined the procedure in allocating net income earned, to depreciation reserve accounts, claiming that net income earned had not been sufficient in recent years to meet the full amount of actual depreciation occurring in operating a joint system of street cars and buses.

The apparent fact that the street car system has rapidly depreciated in recent years, and that the Company was faced with heavy renewals if the system was to be continued as a street car system, contributed in a very large measure to the policy of substituting buses.

Whether the Company continues as a street car system, as a joint street car and bus system, or as a bus system only, does not alter the fact that the company must earn sufficient funds to cover the wear and tear experienced in operation, if it is to continue to properly serve the public.

4. After hearing all the evidence, and endeavouring to come to a conclusion "according to the merits and substantial justice of the case," as provided by section twenty-six of the Industrial Disputes Investigation Act, and while my personal desire is to recommend for the employees as high a wage as possible, there are some stubborn facts to be taken into consideration.

5. Owing to—

(*a*) The obligations of the Company,
(*b*) The fact that the Board explored the possibility of increasing the revenue by advancing the fares charged, and that the representatives of both the parties to the dispute questioned the proposal, as likely to defeat its own ends,
(*c*) The fact that in the meetings of the Board with the representatives of the parties to the dispute no practical suggestion was made beyond the methods now in use whereby revenues can be increased,
(*d*) The reduced revenues from operations in recent years, which are greatly below those of the period when the fifty-five cent rate was paid,
(*e*) The present financial position of the Company,
(*f*) The prospects for the immediate future,
(*g*) The hope that the Company will be able to continue to serve the transportation needs of the citizens of London in an acceptable manner, with

improvements when justified, brings me to the opinion that the highest wage rates it can afford to pay would be an increase of two cents per hour over the rates now prevailing.

6. I therefore recommend that the rates be increased by two cents per hour, dating from March 31st, 1937.

7. I join with my colleagues in the recommendation that the request for one week's holiday per year, with pay, should be given consideration by the Company, with a view to working out a plan to provide such holidays for all the employees.

8. I wish to express my admiration of the demeanour of the representatives of both parties to the dispute, in the presentation of their respective views before the Board. The discussions were, at all times, carried on in an amicable manner, and while holding firmly divergent views on some features of the reference, those views were presented in a moderate, gentlemanly way. I was particularly pleased with the evident friendliness existing between the employees and the manager.

9. May I also express my satisfaction in the patient, able conduct of the Board meetings by the Chairman, and say that it has been a pleasure to serve with my colleagues of the Board. My only regret is that the considerations mentioned, according to my judgment, prevent me from joining in a unanimous report.

Respectfully submitted,

(Sgd.) J. F. WHITE,
Member of the Board.

London, Ontario, April 6th, 1937.

Alberta Labour Disputes Act

The Alberta Gazette, of March 15, contained the report of the Board of Conciliation and Investigation, appointed by the Minister of Trade and Industry to inquire into a dispute between the Union Packing Company Limited, of Calgary, and the Calgary Meat Packing and Purveying Local of the Canadian Victuallers and Caterers Union (Labour Gazette, March 1937, pages 299-300).

In regard to wages, the Board recommended that all employees be given an increase of three cents per hour, effective from March 1, 1937. Also, the Department of Trade and Industry is requested to determine existing rates at the competing Calgary plant in an endeavour to ascertain the minimum rate being paid in each department, and subsequently to furnish the Union Packing Company, Limited, with a copy of such minimum schedule, which shall be adopted by the Company, not later than May 1, 1937.

The Board further recommended that the five employees who were laid off on February 1, 1937, should be recompensed by the Company, at regular wages on the basis of a forty hour week, from that date to February 8, the day on which they, in common with the other employees, refused to accept the ruling of the Minister that they must return to work before the Board of Conciliation could function. Further, that the strikers should be called back to work not later than March 15, without favour or prejudice and with the rights formerly enjoyed.

Another recommendation was "that seniority, coupled with ability and adaptability, be taken into consideration in the laying-off, re-employment, and promotion of employees."

The Board, while recognizing the right of association, expressed the opinion that "it would be unjust to lay down any principle."

General recommendations, applicable to the entire packing industry, were submitted, viz: (1) the desirability, if possible, of supplying special equipment that would reduce working hazards; (2) a limited apprenticeship system.

Training for Unemployed in Great Britain

In a report of the Board of Education and the Statistics of Public Education for England and Wales entitled "Education in 1935" reference is made to the provision of authorized courses of instruction for unemployed boys and girls under the Unemployment Act, 1934. The report states that these courses were provided wherever warranted, and attendance was made obligatory upon a large number of boys and girls. Evening classes were provided for unemployed adults in certain districts. The subjects taken in these classes were largely of a practical nature and the report groups them generally under three main headings, viz.: various practical subjects, 245 classes; Commercial and Academic subjects, 94 classes; Physical Training and First-Aid, 79 classes. It is stated that by far the greatest number of classes have been in woodwork, boot and shoe repairing and physical training, but that a substantial number, however, have also been held in needlework and dressmaking, cookery, art and art crafts, motor engineering, wireless, commercial subjects, music and singing, and English including dramatic work and foreign languages.

SETTLEMENT OF RAILWAY WAGES DISPUTE

Following two weeks' negotiation and discussion between the railway managements and representatives of the railwaymen a compromise was reached on March 29 in regard to the restoration of the basic wage rates on the Canadian Pacific and Canadian National Railways, the settlement providing for the removal by progressive steps of the entire 10 per cent wage deduction within a period of twelve months from April 1, 1937. The railways had already made effective on February 1 of this year the first change in the deductions recommended in the majority report of the Conciliation Board which had enquired into this dispute, the 10 per cent deduction being reduced to 9 per cent on that date. The new agreement provides that this 9 per cent deduction will be reduced progressively at the rate of 1 per cent every two months until the end of 1937, the balance or 4 per cent to be reduced in two stages, 2 per cent on February 1, and the final 2 per cent on April 1, 1938, the basic wage rates being thus restored on the latter date.

This agreement dispelled the threat of a strike which the employees had by ballot authorized the union officials to call unless a settlement satisfactory to them was obtained. During the negotiations the Minister of Labour, Honourable Norman McL. Rogers, had kept in constant touch with the situation, and when a deadlock occurred he called both parties into conference at Ottawa on Good Friday, March 26. As a result of the Minister's discussion with the respective parties, it was agreed that direct negotiations would be resumed in Montreal on the following day, Saturday. On Monday the parties reached an amicable agreement. The Honourable Mr. Rogers in voicing his satisfaction with respect to the settlement, stated that "the Canadian railways and the employee organizations have established a fine tradition of adjusting their differences by collective bargaining and direct negotiation. That tradition was worth preserving. It had been maintained in the present instance. I think the settlement is most creditable to both parties to the dispute".

The Board of Conciliation and Investigation which dealt with this dispute had presented a majority and a minority report early in February. The original request of the men was for the immediate discontinuance of the 10 per cent wage deduction and restoration of the basic wage rates provided in the respective agreements between the railways and their employees in effect prior to 1931. The chairman of the Board, Honourable Mr. Justice A. K. Maclean, and the Board member nominated by the companies, Mr. W. Sanford Evans, of Winnipeg, recommended the lowering of the wage deduction by 1 per cent on February 1, 1937, an additional 1 per cent not later than August 1, and another 1 per cent not later than November 1, 1937, the deduction being thus reduced from 10 to 7 per cent. In addition a greater change in favour of the employees was to be made in the wage deductions whenever, and to the extent, that the revenues of the railways exceeded certain figures, calculations to be made every quarter and the manner of calculation to be that, for every increase of $7,500,000 in the combined gross operating revenues of the railways over the revenues of 1935, a reduction of ½ per cent in the wage deduction was to be accounted as having accrued to the employees, and when the percentage of accruals became higher than the fixed percentage then in effect or due, the higher percentage was to be substituted for the fixed minimum percentage one month after the end of the quarter year.

Mr. Bancroft in his minority report disagreed with this recommendation and urged the elimination during 1937 of the entire 10 per cent wage deduction in the following manner: 4 per cent on February 1 and 6 per cent in three equal instalments on the first day of the months of May, August and November, respectively, or, in the alternative, that 4 per cent of the wage deduction be eliminated on February 1, and that on June 1 negotiations be entered into to determine when the other stages of the elimination of the deductions from pay cheques should occur during 1937.

New Agreement

Following is the text of the new agreement reached on March 29:

Agreement betweeen the Canadian National Railways Company and the Canadian Pacific Railway Company respectively, and their various classes of Employees, made at the City of Montreal on the 29th day of March, 1937.

The parties hereto agree that the 10 per cent deduction from each employee's pay cheques, calculated on existing basic rates of pay, under the terms of the Agreement dated 3rd November, 1934, shall be adjusted so as to reduce the rate of deduction to be effective as follows:

Effective	*Amount of deduction*
February 1, 1937	9 per cent
April 1, 1937	8 per cent
June 1, 1937	7 per cent
August 1, 1937	6 per cent
October 1, 1937	5 per cent
December 1, 1937	4 per cent
February 1, 1938	2 per cent
April 1, 1938	0 per cent

CONCILIATION WORK OF THE DEPARTMENT OF LABOUR FROM JANUARY 1, 1937, TO MARCH 31, 1937

CONCILIATION proceedings are carried on by the Department of Labour for the most part under the provisions of the Conciliation and Labour Act which empowers the Minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, preliminary inquiries and mediation by officers of the Department result in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation.

The Department of Labour has on its staff conciliators and mediators who are stationed at Vancouver, Toronto, Ottawa, and Montreal. The territory of the officer resident in Vancouver comprises the four western provinces. The conciliation officer resident in Toronto confines his activities to Ontario, while the officer in Montreal covers the province of Quebec and the Maritime Provinces. The headquarters of the Chief Conciliation Officer are at Ottawa.

The following statement covers the more important conciliation matters dealt with during the period January 1 to March 31, 1937. (An article covering the period October 1 to December 31, 1936, appeared in the Labour Gazette, January, 1937, page 13.)

Cotton Mill Workers, Welland, Ont.—A strike occurred on December 22, 1936, of employees of the Empire Cotton Mills, Limited, Welland, Ontario, the workers demanding wage increases of approximately 20 per cent. Mill conditions, the quality of cotton used and the speed of production were also matters of dissatisfaction. The Company had, a short time before, made effective an upward adjustment in wages of approximately 6 per cent. Officials of the Department of Labour of Ontario intervened in the matter but a settlement was not reached. On January 13, 1937, steps were taken by the federal Department of Labour towards finding some solution of the problem, and on the same day the federal Member of Parliament for Essex West requested that the Department intervene. The following morning a request for the conciliation services of the Department was received from a representative of the Welland Textile Workers' Union, which had been organized subsequent to the strike. An officer of the Department interviewed, in Montreal, the President of the employing Company and his assistant. The position of the Company was that the large majority of the employees desired to return to work but were prevented from so doing by mass picketing. They agreed with the departmental officer that if the employees would resume work at once all would be taken back without discrimination, that certain adjustments would be made in the wages of the lower paid classes, and a general wage increase made effective when business improved. The conciliator then proceeded to Welland and, with the assistance of an officer from the provincial Department of Labour, was successful, after considerable difficulty, in arranging for a secret ballot to be taken on the offer made by the employers. The ballot, taken by the civic authorities on January 22, rejected the offer by a vote of 653 to 130, with 6 spoiled ballots. Following this, application was made for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, but as the Act applies directly only to mines and other public utility industries the consent of both parties to the dispute was necessary. The Company, however, would not agree to the establishment of a Board but indicated that it would be willing to co-operate with the Department in any efforts which might be made towards a settlement. On February 10 word was received in the Department that, with the assistance of officers of the provincial Department of Labour, a settlement, substantially on the basis of the proposals put before the strikers by the federal conciliator in January, had been reached. It was stated that 865 employees of this plant were affected by the dispute.

Glass Factory Workers, Hamilton and Wallaceburg, Ont., and Redcliffe, Alta.,—On August 19, 1936, a strike occurred in the plant of the Dominion Glass Company, Limited, Mamilton, Ontario, involving approximately 535 employees, members of the American Flint Glass Workers' Union of North America. This was followed by sympathetic strikes at the plants of the Dominion Glass Company at Wallaceburg, Ontario, and Redcliffe, Alberta. Details of these strikes were given in the September, 1936, issue of the Labour Gazette. No request was received from either party to the dispute for the conciliation service of the federal Department

of Labour, but early in December, 1936, the Department of Labour, on its own initiative, interested itself in the matter and separate conferences were held with officials of the Dominion Glass Company, Limited, and with representatives of the Union. At the close of March arrangements were being made for a conference between the parties directly concerned with the hope that a basis of settlement might be found.

Labourers, Toronto, Ont.—On January 14, 1937, a representative of the Toronto District Trades and Labour Council requested the services of a conciliation officer of the Department of Labour in connection with a dispute between the members of Toronto Wreckers' Local of the International Hod Carriers, Building and Common Labourers' Union of America, and a contractor in that city. It was stated that this Local had an agreement with the contractor that only union labour would be employed but that a few days previously the contractor had given a contract for certain demolition work to another contractor not a party to this agreement and this latter contractor was employing non-union labourers on the work. The Union representatives alleged that this was a direct violation of the terms of their agreement and in consequence picketed the premises. A departmental officer investigated the matter, and separate and joint conferences were held. The position of the contractor was that the work in question was, for reasons stated, not a contract in the usual sense and therefore it did not come within the terms of the agreement. Before negotiations were concluded, however, one of the union men instituted court proceedings against the contractor in connection with another claim, and the contractor refused to negotiate further.

Street Railway Employees, Vancouver, B.C.—Failing an agreement as to wages and working conditions through negotiation with the British Columbia Electric Railway Company, Limited, certain of its employees, members of Local No. 101, Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, Vancouver, B.C., early in January, 1937, intimated to the Department that they desired the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act. The conciliation services were offered and accepted by the parties to the dispute, and an officer of the Department held separate and joint conferences which resulted in an agreement being signed on February 27 which covers a three-year period. period.

Meat Packers, Vancouver, B.C.—In the January, 1937, issue of the Labour Gazette reference was made to a strike of members of Local No. 95, Meat Cutters and Packing House Employees' Union, employed by Burns and Company, Limited, Vancouver, B.C. The strikers alleged discrimination because of union affiliation but this was denied by the Company. A conciliation officer of the federal Department of Labour and the Deputy Minister of Labour for British Columbia had mediated, but at the close of the year the dispute remained unterminated. During the month of January these officers continued their efforts to find some basis of settlement, and at the end of the month the federal conciliator interviewed the general manager of the Company at Calgary, Alberta, relative to the matter. The employees had agreed to refer the dispute to a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act but as this statute applies directly only to disputes in mines and certain public utilities the joint consent of both parties was necessary, and this was refused by the employing Company. Early in February announcement was made by the Provincial Government that a Board of Inquiry under the provincial Inquiries Act had been established to deal with the case, with Judge J. C. McIntosh of Victoria as Commissioner.

Compressed Air Workers, Montreal, P.Q.—On February 28, 1937, a strike occurred of 62 caisson workers (sand hogs) employed by Angus Robertson, Limited, on work at the Alexandra Pier, Montreal, P.Q., the men demanding wage increases of approximately 75 per cent. This dispute received the immediate attention of conciliation officers of the Department of Labour, and conferences held on March 4 and 5 resulted in an agreement being signed, effective for the duration of the contract for the Pier construction. The rates specified were approximately 33 per cent above the former rates, and adjustments in the scale of pressures were made. Work was resumed on March 6.

Coal Handlers, Montreal, P.Q.—On February 24, 1937, a delegation representing the National Independent Coal Handlers' Association of Montreal, Inc., interviewed officials of the Department of Labour in regard to certain grievances they had against the coal companies of that City with which they are employed. Full details of these complaints were set out in a letter to the Department under date of March 10, and the matter was at once referred to the departmental conciliator resident in Montreal. This

officer conferred with the men's representative, but as certain officials of some of the employing companies were absent from the city further investigation was delayed till the end of the month.

Coal Miners, Cumberland, B.C.—On February 19, 1937, the Department of Labour was advised that a dispute had arisen between the Canadian Collieries (Dunsmuir), Limited, Cumberland, B.C., and the employees, members of Cumberland Local, District 18, United Mine Workers of America, the miners having made a request for the restoration of a bonus which had been eliminated some years ago. A conciliator of the Department, accompanied by the President of District 18, United Mine Workers of America, visited Cumberland and held conferences with the executive committee. The representatives of the men were reminded of the fact that at the convention of District 18 held in Calgary, Alberta, in January it had been decided not to ask for wage adjustments at any of the mines under the jurisdiction of the United Mine Workers of America during the present year. The departmental officer returned to Vancouver, and on the 23rd was advised that the executive committee had agreed to carry on work under existing conditions until the end of the year.

Coal Miners, Cumberland, B.C.—On March 13, 1937, the conciliation services of the Department were requested by the Cumberland Local of District 18, United Mine Workers of America, in connection with the dismissal of a miner employed by the Canadian Collieries (Dunsmuir), Limited, Cumberland, B.C. A conciliator visited Cumberland on the 14th and, upon learning the full facts of the situation, suggested that the matter be taken up under the terms of the existing agreement. He further suggested that if an understanding was not reached in this manner the question should be taken up with officials of District 18, United Mine Workers of America, at Calgary. It is understood that these suggestions were followed.

Pottery Workers, Hamilton, Ont.—On March 13, 1937, the Department of Labour was advised that six employees of the Sovereign Potteries, Hamilton, Ontario, had been dismissed, allegedly for union activities, and the services of a conciliation officer were requested. This request was granted, and on March 15 an officer of the Department conferred, in Hamilton, with the parties to the dispute. It was ascertained that for several months the employees of this firm had discussed the matter of organizing a Potters' Union but no definite action had been taken. On March 6 three employees were discharged, and the following day a mass meeting was held to again discuss the question. Following this meeting three more employees were discharged. The position of the employers was that the dismissals were due to unsatisfactory service on the part of the persons dismissed and that union affiliation had no bearing whatever on the matter. They stated that one case had been reconsidered and that the man would be reinstated, but no further concessions would be made. In the circumstances the departmental officer was unable to render further assistance.

Textile Factory Workers, Sherbrooke, P.Q.—A strike occurred in the plant of the Dominion Textile Company, Limited, Sherbrooke, P.Q., on March 10 involving approximately 840 employees. The strikers demanded increased wages and changes in the method of distributing the work. A conciliator of the federal Department of Labour, assisted by an officer of the Government of Quebec, arranged conferences between the Manager of the Company and a committee representing the employees. The Manager requested that the employees submit in writing their full demands. This was done, and the Manager stated that he would take these proposals to Montreal and have them discussed at the Company's head office. A few days later the Company submitted an increased wage schedule, proposals for better working conditions, and undertakings for the recognition of a mill committee and that no employee would be discharged because of his participation in the strike. The workers' committee accepted these proposals tentatively, subject to approval of all the employees. Later the offer was accepted by a majority of the employees and the strike terminated on the morning of March 19.

Coal Miners, Canmore, Alta.—A strike occurred at Canmore, Alberta, on March 18, 1937, of local miners employed by the Canmore Coal Company, Limited, due to a dispute in respect to the interpretation of a clause of the agreement which was in force. The Industrial Disputes Investigation Act provides that a strike in the coal mining industry shall not occur until the matters in dispute have been dealt with by a Board of Conciliation and Investigation. A representative of the Department of Labour brought this matter to the attention of the President of the United Mine Workers of America and suggested that the strike should be terminated at once. Work was resumed on March 23. Approximately 200 miners were involved in the strike.

Railway Employees throughout Canada.—In November, 1936, a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act was established to deal with a dispute between the principal Canadian railways and various classes of their employees numbering approximately 100,000, over the request of the employees for the discontinuance of the existing 10 per cent deduction in basic rates of pay. The report of the Board was submitted to the Minister of Labour early in February, 1937, but the findings proved to be unacceptable to the representatives of the employees. Subsequently direct negotiations were resumed but the concessions offered by the employing Companies were rejected on March 24 and a strike appeared imminent. At this juncture the Honourable Mr. Rogers, Minister of Labour, invited the Presidents of the Canadian National Railways and the Canadian Pacific Railway Company and representatives of the employees concerned to meet him at Ottawa, and separate conferences were held on the 26th. As a consequence it was agreed that direct negotiations would be resumed without prejudice the following morning in Montreal. Late in the evening of the 29th an announcement was made that an amicable settlement had been reached. Details of the settlement will be found elsewhere in this issue.

Longshoremen, Montreal, P.Q.—During the past several months representations have been made from time to time to the Department of Labour in respect to the situation which has developed in the Port of Montreal regarding the employment of longshoremen. During the season of 1936 there was an agreement in effect between the Shipping Federation of Canada and the National Independent Union of Longshoremen of the Island of Montreal, which was automatically renewed late in the fall of 1936 to cover the season of 1937. During the winter months the International Longshoremen's Association organized a local union in that Port and has made representations to the effect that the majority of longshoremen employed by the Shipping Federation are members of that Association. The National Independent Union of Longshoremen contend that they represent the majority of the longshoremen employed in this Port. The position of the Shipping Federation is that there is an agreement in effect with the National Independent Union of Longshoremen, that this latter body carried out its undertakings last season and that there is no reason to doubt that it will continue to meet the requirements of the agreement. Numerous conferences have been held with the parties involved, and at the end of March the matter was still receiving the attention of the Department.

Longshoremen, Vancouver and Victoria, B.C.—Longshoremen, members of the International Longshoremen's Association, in the Ports of Vancouver and Victoria, have on several occasions within recent months made complaint to the Department of Labour that they are being discriminated against by the Shipping Federation of British Columbia and by certain dock owners in these two Ports. The Shipping Federation of British Columbia has agreements in both these Ports with longshoremen who are members of Canadian associations. An officer of the Department has held a number of conferences with the interested parties and is making an investigation in order that the Department may be fully aware of the actual situation.

35830—2½

Mineral Production in Quebec

According to a preliminary statement issued by the Bureau of Mines, Department of Mines and Fisheries, Quebec, the annual mineral production of Quebec for 1936 reached a new record figure, with $49,535,495, thereby exceeding the previous peak of $46,454,820 in 1929 by nearly 7 per cent.

A large increase of over 40 per cent, is also recorded in the production of non-metallics in 1936 compared with 1935. Shipments of asbestos are reported to have risen from 210,467 tons to 301,287 tons, and the value of production of magnesitic dolomite has increased from $486,084 to $769,176. An increase of 28·7 per cent in the production of metallic substances in 1936 over the preceding year, continues the uninterrupted rise in production from year to year in this group. The figures for 1936 show a total value of $30,639,518 compared with $12,367,932 six years ago. Only a slight improvement in the building industry and the production of building materials is recorded in the statement.

A statement issued by the Workmen's Compensation Board of Ontario indicates that during the quarter ending March 31, 1937, a total of 14,016 accidents were reported to the Board in the industries in Schedule 1 of the Act, 73 of which were fatal. In Schedule 2 industries 469 accidents were reported, including 11 fatal cases, and 515 Crown cases, 9 of which were fatal were reported during the last quarter, making in all 15,000 accidents of which 93 were fatal.

STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1937

The following table shows the number of disputes, workers involved, and time loss for March, 1937, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in man working days
*Mar. 1937	21	5,382	37,088
*Feb. 1937	19	2,404	19,346
Mar. 1936	15	2,872	17,144

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes".

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

While the number of strikes and lockouts recorded for March was only slightly greater than in February, the number of employees involved and the time loss incurred were substantially higher owing to the occurrence of two disputes involving relatively large numbers of workers and causing considerable time loss, namely the strike of furniture factory workers in several localities in Western Ontario and that of cotton factory workers at Sherbrooke, P.Q. The strikes of meat packing employees and coastal longshoremen at Vancouver, B.C., and of fur factory workers at Winnipeg, Man., which began in 1936, were still in progress. In March last year a large percentage of the time loss was due to strikes of loggers in Vancouver Island, B.C., shoe factory workers at London, Ont., and leather handbag workers at Toronto, Ont.

Three disputes, involving 502 workers, were carried over from February and eighteen disputes commenced during March. Of these twenty-one disputes, fourteen terminated during the month, three resulting in favour of the employers affected, three in favour of the workers involved, compromise settlements being reached in seven cases while the result of one dispute was recorded as partially successful. At the end of March, therefore there were on record seven disputes recorded as strikes or lockouts, namely: meat packing workers, Vancouver, B.C., fur factory workers, Winnipeg, Man., longshoremen, Vancouver, B.C., tobacco workers, Kingsville, Ont., rubber factory workers, Kitchener, Ont., woollen textile factory workers, St. Johns, P.Q., and beverage dispensers, Toronto, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to three such disputes, namely: motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; glass factory workers at Hamilton and Wallaceburg, Ont., and Redcliff, Alta., August 19, 1936, one employer; and restaurant employees, Toronto, Ont., Febuary 1, 1937, one employer. The dispute involving shoe factory workers employed by one firm in Toronto, Ont., commencing January 14, 1937, and added to the above list in February, is recorded as having lapsed by the end of March, the employer having closed the factory in Toronto and moved to another city.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistance or allowances for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

The report, dated March 3, 1937, of the Board, appointed under the Alberta Labour Disputes Act to deal with the dispute in February involving meat packing employees in one establishment at Calgary, Alta., is outlined elsewhere in this issue. As stated in the February issue of the Labour Gazette, the Board recommended that the dismissed employees should be reinstated with compensation, that wages should be increased and that certain improvements should be made. It has been reported that by the end of March the employing company had not accepted the Board's recommendations.

A reported strike of silver miners at Mayo, Yukon Territory, on February 9 was mentioned in the Labour Gazette for March. Reports have since been received that the men demanded a reduction in the rate for board from $2.85 per day to $2.00 and that as a result of negotiations this was conceded, to be in effect from April 1. Work was resumed on February 14, it being agreed that February 12 and February 13 should be days off. One hundred and fifty men were involved.

A minor dispute involved twenty-three ice handlers at Peterborough, Ont., for one-half hour about March 1, the men securing an increase in wages from 20 cents per hour to 30 cents.

A minor dispute involved about fifty employees in one meat packing establishment in Toronto, Ont., for one-half hour on March 24. The employees requested an increase in wages and, ten per cent being agreed to, work was resumed.

A minor dispute involved about sixty employees in an asbestos brake lining establishment at Peterborough, Ont., for about one hour on March 31, an increase in wages of twenty-five per cent being requested. As a result of a conference with the management a compromise was agreed to and work was resumed.

A stoppage of work in a number of men's clothing contractors' shops occurred in Montreal, P.Q., from March 10 to March 16. The contractors had attempted to secure higher prices for making up the goods for the manufacturers following increases in wages to be paid under an agreement between the employers and the Amalgamated Clothing Workers' Union effective from January 1 (Labour Gazette, January, 1937, p. 104). Some of the manufacturers having refused to increase the prices, the contractors closed their shops, throwing about 2,000 employees out of work. As a result of conferences presided over by the chairman of the joint committee under the Quebec Collective Labour Agreements Extension Act a settlement was reached to be in effect until the expiration of the agreement on July 1, 1938. Out of the one hundred contractors' shops involved twelve had reached a settlement by March 12 and by March 16 only a few small manufacturers had not agreed to the settlement. There was no dispute between the workers and the employers.

A cessation of work in one coal mine at Florence, N.S., for one day, March 9, involved 675 workers. The dispute was between the machine runners and their helpers as to the division of the contract earnings at piece rates, the management not being involved. The helpers demanded fifty per cent of the earnings instead of forty per cent. The machine runners agreed to this and work was resumed next day.

A cessation of work in an automobile accessory manufacturing establishment at Windsor, Ont., employing about 150 workers, on March 15 has been reported. The employer is reported to have stated that the establishment was closed owing to a shortage of materials but the employees claim that the stoppage was in anticipation of a request for increased wages and a strike of members of the United Automobile Workers' Union. On the following day a delegation of employees submitted proposals for an increase in wages with a minimum rate of 45 cents per hour, eight hours per day, five days per week, recognition of seniority and a shop committee, also no discrimination against union membership. The establishment was reported to be picketed on March 18 and March 19 but by March 24 was operating with almost a full staff. It was not stated under what conditions operations were resumed.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

Meat Packing Workers, Vancouver, B.C.—The inquiry by Mr. Justice J. C. McIntosh, appointed by the provincial government, as a commissioner under the Public Inquiries Act, began on March 17 and evidence was taken until March 30 when the inquiry was adjourned pending negotiations for a settlement. Evidence had been given as to the dismissal of twenty-five workers in December, 1936, claimed by the union to be for union activity, following which over 150 of the remaining employees ceased work on December 29. The efforts of the British Columbia Department of Labour and the western representative of the Federal Department of Labour to bring about a settlement or have the dispute referred to a Board under the Industrial Disputes Investigation Act were described in the evidence. At the suggestion of the Commissioner the representatives of the employing company and of the employees involved in the dispute met with the Commissioner on March 31 to negotiate a settlement if possible.

Fur Factory Workers, Winnipeg, Man.—The inquiry by a Commission, appointed by the provincial government under the Manitoba Evidence Act to inquire into this dispute, resumed its hearings on March 15, and it was reported that the taking of evidence was expected to be completed by March 26 when the Commission would adjourn for the preparation of argument by counsel. During the month charges under the Minimum Wage Act were laid against ten fur manufacturers, some of which were involved in the strike. The arrest of a number of pickets on charges of assault, etc., was reported. The representatives of an employer were charged with assault in connection with serving a court notice on a union official. An injunction against picketing one of the establishments had been renewed. On March 25 the Furriers' Guild of Canada, to which most of the employers belong, granted recognition to a newly organized union, the Manitoba Fur Employees' Association, with a reported membership of about two hundred.

Longshoremen (Coastwise Work), Vancouver, B.C.—As stated in the March issue of the Labour Gazette, the water transport unions in United States ports at various times refused to handle cargo not loaded in Canada by members of the International Longshoremen's Association and the crews of United States ships in the ports of Vancouver and Victoria refused to work the ships for the unloading of cargo if members of the International Longshoremen's Association were not employed. The port of New Westminster was declared "open" by this union. On March 20 the shipping companies' associations in the United States ports informed the union that this constituted a violation of the agreements terminating the strike in the United States early in February. The work on ships held up was then allowed to be carried on; but as certain Canadian coastal shipping companies refused to make agreements with the locals of the international unions the latter stated that picketing in Canadian ports would continue. The Vancouver City Council requested the Minister of Transport to inquire into the refusal of dock owners to allow members of the International Longshoremen's Association to unload ships when asked for by the ship owners' representatives even if the dock owners had agreements with other unions. The Minister referred the request to the Harbour Board.

Loggers, Flanders, Ont.—A number of employees in three camps of one company ceased work on March 4 demanding reinstatement of employees alleged to have been dismissed for union activity. It was reported that some of the dismissed men were camp stewards who made complaints about food and certain working conditions. In one camp the discharged man was reinstated and the complaint as to food disposed of, there having been a delay in the delivery of food owing to the road conditions. Work was resumed on March 6. In the other camps the employer stated that the men were dismissed for breaking the rules, ruining a saw, and for incompetent work. In these camps the dismissed men with some of the strikers left the camp. About 175 workers out of 1,200 in the three camps were reported to have ceased work.

Metal Miners, Mountauban-Les-Mines, P.Q.—Employees in one lead and zinc mine, including mill and yard workers, ceased work on March 4 demanding an increase in wages with a minimum of 25 cents per hour. As a result of conciliation by an officer of the provincial Department of Labour a settlement was reached providing for an increase of 25 cents per day immediately and a further increase of 25 cents per day in three months, also fortnightly pay, no charge for cashing cheques, and a shop committee. Work was resumed on March 8. It was agreed that the men would be paid for the three days lost.

Coal Miners, Canmore, Alta.—Employees in one mine ceased work on March 9, their demand for the employement of additional helpers having been refused. The management pointed out that as work on some operations was becoming slack there were plenty of men already employed to whom the work should be given, so that they need not be laid off, instead of taking on new employees; also that the matter should be taken up as required in the agreement. The western representative of the Department of Labour dealt with the dispute as stated elsewhere in this issue. The district secretary of the United Mine Workers of America visited the locality and as a result of discussions with the management and the employees work was resumed on March 23. Arrangements for negotiations for a renewal of the agreement expiring on March 31 were made.

Coal Miners, Stellarton, N.S.—Employees in one mine ceased work for one day, March 11, refusing to enter the mine with a certain engineer operating the hoist. It appears that a complaint had been made as to improper operation previously, but on investigation it was ascertained this was due to a misunderstanding and the engineer was not to blame. Work was, therefore, resumed next day.

Bakers, Toronto, Ont.—A number of bakers employed by a bakery and confectionery company operating a number of stores ceased work on March 1, demanding the reinstatement of four employees alleged to have been dismissed for union activity. A union committee had demanded wage increases, reduced hours and recognition of the Bakery and Confectionery Workers' International Union. As a result of negotiations brought about by officers of the Trades and Labour Council, a settlement was effected providing for the return of the strikers and men dismissed, also for payment of wages on the basis of fifty-one hours per week and no discrimination. Union recognition, however, was refused. Work has resumed on March 16.

Tobacco Workers, Kingsville, Ont.—Employees in one establishment ceased work for an hour on March 10, demanding an increase in piece rates. It appears that on changing to a different kind of leaf the workers claimed they could not earn as much as before. The management claimed that they could earn more and that during the period when the change was made they had been working only

part time. It was agreed that after two days trial wages would be adjusted and work was resumed. Later a five per cent bonus was given.

Tobacco Workers, Kingsville, Ont.—A number of employees in one establishment ceased work on March 18 demanding an increase in wages, piece rates, owing to a change in the work. The strikers remained in the building but on being warned by the Mayor that this was illegal they moved out and picketed the establishment. A number of time workers entering for work were intercepted but after a warning by the Chief of Police the pickets allowed them to enter. As a result of mediation by a representative of the Ontario Department of Labour a committee of the strikers negotiated a settlement with the management on March 28 providing for an increase in piece rates to meet the change in work, operations to be resumed on April 1 by eighty workers and by others on the following days as production proceeded. The management, however, refused to take back all of the strikers, apparently on the ground that some were not efficient and that others had instigated the sit-down tactics and illegal picketing. The settlement was not accepted by the main body of strikers, only twenty-one reporting for work on April 1, and the establishment was picketed again. The management claimed that a large percentage of the employees were satisfied and were kept from work by intimidation and that the low earnings cited were not for full time work. The strikers in the meantime had organized the Kingsville Tobacco Workers' Union. At the end of the month the dispute was unterminated.

Rubber factory workers, Kitchener, Ont.—Employees in one establishment ceased work on March 24, demanding increased wages, reduced hours and recognition of the United Rubber Workers of America. The strikers remained in the factory over night but negotiations between the management and union officials began and the strikers moved out. On March 31 agreement had been reached on most of the points in dispute and early in April a settlement was reached and work was resumed on April 3 and the days following. A compromise on the wage increase was made.

Tannery Workers, Owen Sound, Ont.—Employees in one establishment ceased work on March 20 demanding a twenty per cent increase in wages, time and one-half rates for overtime, and 54 hours per week. As a result of mediation by a representative of the Ontario Department of Labour a compromise was reached at a wage increase of ten per cent with time and one-half rates for overtime, and work was resumed on March 23.

Cotton Factory Workers, Sherbrooke, P.Q.—Spiners in one establishment ceased work on March 10, causing the factory to be closed, involving over 600 other employees who it appears supported the strikers. The strikers demanded increases in wage rates and changes in work which affected earnings. It appears that the dispute arose over work on new machines, earnings being lower than expected. A settlement was reached as a result of conciliation by a representative of the Quebec Department of Labour and a special conciliator appointed by the Federal Minister of Labour at the request of the member of Parliament for the district. A new schedule of wages was agreed upon providing for increased rates and for more satisfactory working conditions and it was arranged that a committee of employees would be recognized by the management. The settlement was submitted to a vote of all employees and was approved by a substantial majority on March 18. Work was resumed partially the next day and generally on March 22.

Woolen Textile Workers (Weavers, Dyers, Etc.), St. Johns, P.Q.—Employees, approximately 65, in one establishment employing dyers, bleachers, etc., ceased work on March 16, demanding increases in wages, reduction in hours worked, and recognition of the National Catholic Federation of Textile Workers, and on March 18 they were jointed by 78 employees in a woollen textile mill under the same management, also demanding recognition of the union. Conciliation by a representative of the Quebec Department of Labour did not result in a settlement. The strikers agreed to arbitrate but the management refused. At the end of the month a settlement had not been reported.

Carpet Weavers And Setters, Peterborough, Ont.—Employees in one establishment ceased work on March 20 to secure an increase in wages of twenty-five per cent, being the restoration of a reduction made during the depression. Negotiations between officers of the union and the management resulted in an increase of ten per cent being made, and work was resumed on March 29.

Cotton Factory Workers, Welland, Ont.—A number of workers employed on the night shift in one factory ceased work on March 30, alleging discrimination by the management in making adjustments in wages and working conditions following a strike which terminated on February 9. It is reported that only twenty-five or thirty of the

employees caused the stoppage, thus indirectly involving over one hundred other employees, by turning off the power, and tried to induce the day shift to strike. Most of the night shift resumed work on the next shift and the others were declared by the management to have forfeited their positions. It was stated that the allegations had been investigated twice by an officer of the Ontario Department of Labour but had not been substantiated. The officers of the United Textile Workers of America stated that the stoppage should not have occurred as there had been no negotiations or authorization for such action.

Furniture Factory Workers, Western Ontario.—Employees in a number of factories in several localities ceased work on March 1 to secure an agreement with the manufacturers as negotiations for a renewal of that in effect from August 5, 1935, to June 30, 1936, had not been successful. This agreement had been extended under the Ontario Industrial Standards Act to all furniture factories throughout the province except the Toronto district. The strike was called by the District Council of the Furniture Workers' Union of the United Brotherhood of Carpenters and Joiners of America and involved workers at Hanover, Wingham, Chesley, Stratford, Kincardine, Listowel, Lucknow, Owen Sound, Strathroy, Kitchener, Hespeler and Preston. The union demands included the forty-four hour week with time and one-half rates of pay for overtime, a minimum rate of 50 cents per hour for skilled classes, 43 cents for semi-skilled, 35 cents for unskilled and 20 cents for boys under twenty-one years of age. As a result of conferences with officials of the Ontario Department of Labour an agreement was reached which provided for two zones, B including the following cities and surrounding areas; Toronto, Hamilton, St. Thomas, London, Woodstock, Kitchener, Guelph and Stratford, and A the rest of the province. Maximum hours per week are forty-seven with time and one-half for overtime. For boys in both zones the minimum rate is 18 cents per hour with annual increases of three cents per hour for four years. For the other classes the minimum rates are: Zone A, unskilled 32 cents, semi-skilled 37 cents, skilled 40 cents, average wages for all not to be less than 37 cents; Zone B, unskilled 34 cents, semi-skilled 39 cents, skilled 49 cents, with the average for all not less than 39 cents. It was arranged that the agreement would be extended to all factories under the Industrial Standards Act of Ontario and it is outlined elsewhere in this issue. Work was resumed generally in the factories on strike on March 8.

Foundry Workers, Point Edward (Sarnia), Ont.—A number of employees, moulders, coremakers and labourers, in one establishment producing castings for automobiles ceased work on March 1, some remaining in the factory and preventing other workers from using the machinery, while others picketed outside and prevented the entry of other workers and trucks for the transportation of the castings. The management then closed the establishment. The strikers were members of the Amalgamated Association of Iron, Steel and Tin Workers of North America affiliated with the Committee for Industrial Organization (Labour Gazette, August, 1936, page 680). This union had recently organized a local and asked the employer for an eight hour day, $5 per day and recognition of a union committee to deal with grievances, sanitary and other shop conditions. The management refused and stated that the union represented only a small minority of the 370 employees. The union reported that while the wage rate was 50 cents per hour for nine hours, it often required ten and one-half hours to turn out the work required, with no extra pay. The strikers in the plant were summoned before a magistrate on charges of trespass but did not appear and the authorities were considering what action should be taken to avoid violence. On March 3 a body of the employees not on strike armed with clubs and iron rods entered the plant and ejected the seventy-eight strikers, handing them over to the police and then searched their homes for those who had escaped. A number were reported to be injured, three being taken to the hospital. Work was then resumed, the strikers being replaced. Provincial police were sent to the locality and remained until March 8. On March 5, fifty-five of the strikers were convicted of trespassing and released on suspended sentence, while ten were discharged owing to lack of identification. The president of the local union was fined $10 and costs. An organizer of the union was charged with assault but this was dismissed on March 12 as the informant did not appear. Various labour organizations, a committee of clergymen and business men in Toronto, and the City Council of Sarnia adopted resolutions that the provincial or federal government should investigate the dispute.

Metal Factory Workers (Auto Parts), Oshawa, Ont.—Employees in one establishment ceased work on March 18, their demand for an increase in wages and recognition of the United Automobile Workers of America having been refused. As a result of conciliation by officials of the provincial Department of Labour a settlement was reached providing for a compromise on the increase and for recognition of the union. Work was resumed on March 24. Wages for women were advanced seven cents per hour, and for males

STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1937*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in progress prior to March, 1937			
MANUFACTURING—			
Animal Foods—			
Meat packing workers, Vancouver, B.C.	202	4,000	Commenced Dec. 29, 1936; against discharge of employees, claimed to be for union activity; unterminated.
Fur, Leather, etc.—			
Fur factory workers, Winnipeg, Man.	100	2,000	Commenced Aug. 11, 1936; for union agreement, increased wages and 40-hour week; unterminated.
TRANSPORTATION—			
Water—			
Longshoremen (coastwise work), Vancouver, B.C.	200	1,000	Commenced Nov. 23, 1936; for recognition of union; unterminated.
(b) Strikes and Lockouts commencing during March, 1937			
LOGGING—			
Loggers, Flanders, Ont.	175	262	Commenced Mar. 4, 1937; against discharge of workers, alleged to be for union activity; unterminated Mar. 5, 1937; partially successful.
MINING—			
Metal miners, Montauban-les-Mines, P.Q.	240	720†	Commenced Mar. 4, 1937; for increased wages; terminated Mar. 6, 1937; in favour of workers.
Coal miners, Canmore, Alta.	200	1,400	Commenced Mar. 9, 1937; for employment of additional workers; terminated Mar. 22, 1937; in favour of employer.
Coal miners, Stellarton, N.S.	450	450	Commenced Mar. 11, 1937; for discharge of certain worker; terminated Mar. 12, 1937; in favour of employer.
MANUFACTURING—			
Vegetable Foods—			
Bakers, Toronto, Ont.	22	286	Commenced Mar. 1, 1937; against dismissal of workers, alleged to be for union activity, for union recognition, increased wages and reduced hours; terminated Mar. 15, 1937; compromise.
Tobacco and Liquors—			
Tobacco workers (tiers), Kingsville, Ont.	90	10	Commenced Mar. 10, 1937; for increased wage rates on change of material; terminated Mar. 10, 1937; compromise.
Tobacco workers, Kingsville, Ont.	156	1,700	Commenced Mar. 18, 1937; for adjustment of piece rates; unterminated.
Rubber Products—			
Rubber factory workers, Kitchener, Ont.	550	2,750	Commenced Mar. 24, 1937; for increased wages, reduced hours and recognition of union; unterminated.
Fur, Leather, etc.—			
Tannery workers, Owen Sound, Ont.	57	114	Commenced Mar. 20, 1937; for increased wages; terminated Mar. 22, 1937; compromise.
Textiles, Clothing, etc.—			
Cotton factory workers, Sherbrooke, P.Q.	842	7,500	Commenced Mar. 10, 1937; for increased wages and changes in working conditions; terminated Mar. 20, 1937; compromise.
Woollen textile factory workers (weavers and dyers), St. Johns, P.Q.	153	3,900	Commenced Mar. 16, 1937; for increased wages, reduced hours, and union recognition; unterminated.
Carpet weavers and setters, Peterborough, Ont.	95	522	Commenced Mar. 20, 1937; for increased wages; terminated March 27, 1937; compromise.

STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1937

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
(b) Strikes and Lockouts commencing during March, 1937—Concluded			
Cotton factory workers, Welland, Ont.	30	30	Commenced Mar. 30, 1937; against alleged discrimination; terminated Mar. 30, 1937; in favour of employer.
Other Wood Products—			
Furniture factory workers, Western Ontario	1,500	9,000	Commenced Mar. 1, 1937; for union agreement with increased wages; terminated Mar. 6, 1937; compromise.
Metal Products—			
Foundry workers, Point Edward (Sarnia), Ont.	100	200	Commenced Mar. 1, 1937; for increased wages, reduced hours and recognition of uuion committee; terminated Mar. 2, 1937; in favour of employer.
Metal factory workers (auto parts), Oshawa, Ont.	150	750	Commenced Mar. 18, 1937; for recognition of union and increased wages; terminated Mar. 23, 1937; compromise.
Construction—			
Bridge—			
Caisson workers, Montreal, P.Q.	62	310	Commenced Mar. 1, 1937; for increased wages; terminated Mar. 5, 1937; in favour of workers.
Service—			
Business, etc.			
Beverage dispensers, Toronto, Ont.	8	184	Commenced Mar. 4, 1937; for union agreement with increased wages; unterminated.

*In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.
†Employees were paid for the time lost.

five cents, except that some of the lower paid were raised ten cents. Negotiations for a reduction in hours below ten per day are to take place later.

Caisson Workers, Montreal, P.Q.—Employees on one construction job ceased work from March 1 to March 6, demanding an increase in wages. As a result of conciliation by officials of the Federal Department of Labour a schedule with higher wage rates and improved working conditions under pressure was agreed upon and work was resumed. The proceedings are outlined elsewhere in this issue.

Beverage Dispensers, Toronto, Ont.—Employees in one hotel ceased work on March 4, demanding a union agreement with wage increases from $15 per week of 54 hours to $18 for floormen and $21 for tapmen. The employer was involved in a strike of bakery and confectionery workers and the beverage dispensers ceased work and made the above demands for themselves. The other dispute was settled on March 16 as stated elsewhere in this article, but the beverage dispensers continued on strike. At the end of the month a settlement had not been reached.

Cotton Textile Industries in Canada

A report entitled "The Cotton Textile Industries in Canada, 1935," has been issued by the Dominion Bureau of Statistics. The report is based on returns received from 106 establishments, being two more than in 1934. The gross value of production in the cotton textile group amounted to $68,917,349 in 1935, a decrease of $1,358,631 or 1·9 per cent as compared with the previous year. Capital investment also declined by $5,168,204 or 6·2 per cent, to $77,902,879, while the total number of employees increased by 219, or 1·9 per cent, to 20,248. The combined salaries and wages in 1935 amounted to $15,031,412, being a decrease of $375,939, or 2·4 per cent. The cost of materials used rose by 2·4 per cent or $926,128 to a total of $38,615,498.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

The latest available information as to strikes and lockouts in various countries is given in the Labour Gazette from month to month, bringing down to date that given in the March issue, in the review of Strikes and Lockouts In Canada and Other Countries, 1936. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

Great Britain

The number of disputes beginning in February was 75 and 11 were still in progress from the previous month, making a total of 86 disputes in progress during the month, involving 24,900 workers with a time loss of 84,000 working days for the month.

Of the 75 disputes beginning in February, 16 were over demands for increases in wages, 2 over proposed wage reductions, 17 over other wage questions, 3 over questions as to working hours, 16 over the employment of particular persons or classes, 7 over other questions as to working arrangements and 11 over questions of trade union principle. Three disputes were due to sympathetic action. Final settlements were reached in 54 disputes during February, of which 11 were settled in favour of workers, 25 in favour of employers and 18 ended in a compromise. In 8 other disputes, work was resumed pending negotiations.

A strike of 10,000 bus drivers and other motor transport employees, affecting street and highway traffic in Scotland lasted from March 9 to March 19. Work was resumed pending negotiations for increased wage rates.

Two thousand armament workers at Glasgow went out on strike March 27 for an advance in wages.

Two strikes in aeroplane manufacturing plants occurred during March. One, at Derby, lasted for three weeks when 300 grindermen went on strike demanding higher wages and indirectly affecting 3,500 other employees. Work was resumed March 11 pending negotiations as to wage rates. The other strike, at Hayes, Middlesex, over the dismissal of one employee. was settled after five days, on March 10, when the employee concerned had secured work elsewhere.

United States

The number of disputes beginning in December was 137 and 120 were still in progress from the previous month, making a total of 257 disputes in progress during the month, involving 196,000 workers with a time loss of 2,260,000 working days for the month.

Demanding that the United Automobile Workers of America be the sole bargaining agency for all employees, 67,000 employees of the Chrysler Motor Company plants in the Detroit, Michigan, area became involved in a strike March 8, in which 6,000 workers occupied the plants in a sit down strike. Twenty thousand workers in an automobile body plant were indirectly involved. Through the mediation of the Governor of Michigan and federal government officials, the strikers left the plant March 24, but an agreement was not reached until April 6, when the union was recognized as the bargaining agency for its members and the union agreed to prevent "sit down" strikes and other stoppages in the plants for the duration of the agreement, that is until the end of March, 1938. Further meetings were to be held to settle other points at issue, following the resumption of work.

A strike of 10,000 employees of the Hudson Motor Company at Detroit also began March 8, and was settled April 8, on practically the same terms as in the Chrysler Company strike.

When they failed to agree with employers on the terms for the renewal of their agreement, 460,000 bituminous coal miners throughout the Eastern Appalachian region went on strike for one day, April 2. Agreement was reached by the end of the day, in which the wage increases demanded were granted, but the miners withdrew their further demands for a two weeks' vacation and a guarantee of 200 days work a year.

Strikes of employees of hosiery manufacturing plants at Reading, Pennsylvania, involving 9,000 workers, were in progress during March. Settlements were reached in some mills on March 25.

A strike of 5,500 taxi drivers at Chicago, Illinois, began March 5, when they demanded closed shop conditions and increased commissions. Violent incidents were reported March 17. No report of a settlement has been noted.

At Santa Monica, California, 2,500 employees of an aeroplane manufacturing plant went on strike February 23. Although the majority of the strikers had returned to work before March 11, final settlement was not reached until then. The strikers secured recognition of their union, a division of the United Automobile Workers, as the collective bargaining agency for its own members.

ESTABLISHMENT OF UNEMPLOYED YOUTH

Purposes of $1,000,000 Vote for Training Projects Outlined by Minister of Labour

THE provision in the estimates of the Department of Labour of a sum of $1,000,000 (a new vote) for the specific purpose of developing training projects for unemployed young people featured a discussion in the House of Commons recently. As indicated by the Minister of Labour, Hon. Norman McL. Rogers in the House on March 29 in introducing Bill 80—The Unemployment and Agricultural Assistance Act, 1937—this legislation provided the means by which the Dominion government could co-operate with provincial governments in dealing with the establishment of unemployed youth.

Subsequently, on April 9, in the consideration of the Department's estimates, the purpose of the $1,000,000 item "to provide for development and training projects for unemployed young people," was given in greater detail by the Minister.

Reviewing the background, Hon. Mr. Rogers referred to the establishment of a youth employment committee as an adjunct to the National Employment Commission. Upon the basis of information obtained through the registration and classification of the unemployed there was indicated a "very special problem as regards the age-group of eighteen to twenty-five years" who had completed their school years and who have been obliged to seek employment under most unfavorable conditions. Accordingly, as a result of a study, it had been recommended that a sum be placed in the estimates to provide for special training projects. Dealing with the manner in which this sum is to be expended to the greatest advantage, the Minister stated:

"The youth employment committee made a number of reports directly to the national employment commission. The commission gave further study to these reports and made definite recommendations to the government. In these reports the suggestion was made that this money could be expended to the best advantage in some provinces upon forestry projects or upon projects which would enable unemployed young men to fit themselves for work in the primary industries of those particular provinces. For example, in British Columbia, where there is a very large forest reserve and lumbering is a basic industry, it was suggested that it would be most desirable that the training projects there should relate to forestry or to mining, another important industry in the province. So far as the western provinces are concerned, there is an obvious advantage in having training projects directed rather towards employment in agriculture in one of its forms or conceivably in the building trades. We have had some definite representations with regard to the need for further skilled labour in the building trades in some of the western provinces. In the central provinces there is need also for work in the forests, particularly fire protection, and we have under consideration the establishment of a small corps of young unemployed men who will gain experience and as well, we believe, a wholesome acquaintance with the outdoors in the protection of the forests."

Continuing, the Minister pointed out that "it would be neither wise nor practical to indicate one pre-digested plan, so to speak, which would apply generally throughout the Dominion", and added: "We are of the opinion, especially where we have in view that this action should be taken in co-operation with the provinces, that the training projects should be related as far as possible to the basic industries of the province wherein unemployment exists. There is also, and I believe it is becoming more evident each day, a growing need for training some of our young unemployed in the skilled trades. That applies particularly in certain branches of the building industry. Hon. Members are well aware that this industry has been passing through a very acute depression. It has not responded as quickly to the forces of recovery as have some other industries in the country. At the same time it is now becoming recognized in some of the larger cities that we may have a real shortage in the building and construction industry. We propose to discuss with the provincial governments of the more industrialized provinces the feasibility of arranging special classes for unemployed young people in such trades as are most likely to ensure their early absorption into the economic life of the country."

The Minister indicated that in the establishment of any industrial classes the trade unions would be consulted. He observed that what was being proposed under the vote was no "more than an approach to the larger problem," adding that from all the information obtained in recent months "there is no feature of the general unemployment problem that challenges our attention and interest today to a greater degree than this problem which we seek to deal with under this vote."

Further outlining the intent of the vote, the Minister said:

"In the allocation of these amounts we shall be obliged to work with the provincial govern-

ments, as we shall have to do in connection with other votes which have received the consideration of the committee. It is not intended to set up camps except where camps are a necessary part of the equipment for the work which is to be undertaken. That would apply to forestry work, and probably to training projects for hard rock mining. Where it is contemplated to give special courses elsewhere to train the unemployed, we shall try to utilize, in co-operation with the provincial governments, the existing equipment in the form of technical schools, and so on. We shall try to arrange the courses in such a way as to bring about the highest degree of absorption of young people in industry. I might say that it is not intended that the money shall be reserved exclusively for unemployed young men. We have in mind that some provision may have to be made for unemployed young women. They will be provided with training in certain classes of work as may be recommended to the government....."

"I am somewhat at a disadvantage in stating exactly how far this money will go. I have not the least thought that the vote is large enough to deal with the problem as one would like to deal with it, but at the same time I hope it is large enough to give us a clear sense of direction, if we find the problem is a continuing one."

JOINT MEETING OF DOMINION CONFERENCE OF MAYORS AND UNION OF CANADIAN MUNICIPALITIES

A joint meeting of the Dominion Conference of Mayors and the Union of Canadian Municipalities was held on March 16, 17 and 18 in Ottawa, about 200 mayors and other civic representatives from all parts of the Dominion being in attendance. The meeting constituted the third in a series of the Dominion Conference of Mayors and the 37th annual convention of the Union of Canadian municipalities.

Addresses and Reports

In a brief address of welcome the Chairman of the Dominion Conference, Mayor Stanley Lewis of Ottawa, stated that "in the two years of its existence, the Dominion Conference of Mayors has accomplished a great deal for the municipalities of Canada." He said that the joint meeting had been called "to arrange for amalgamation with the thirty-seven year old Union of Canadian Municipalities in order that duplication of effort in our field may be eliminated and our strength may be increased."

Alderman W. H. Biggar of Montreal, as retiring president of the Union of Canadian Municipalities, submitted a report dealing with the past activities of that organization and the proposed amalgamation of the two bodies. "Both bodies", he said, "are in favour of this move, in principle, and it remains only to work out the details." The report, containing recommendations regarding the proposed fusion was referred to the nominating committee for action.

Canadian Federation of Mayors and Municipalities

In the new constitution of the Canadian Federation of Mayors and Municipalities the purposes of the organization were outlined as follows.

"1. To collect and disseminate statistics and related information on all manner of municipal practices and procedures. Such information as is gathered shall be made available to all agencies or individuals with a legitimate interest in municipalities.

"2. To hold an annual conference for the purpose of discussing matters of municipal administration of interest to municipalities.

"3. To represent the interests of Canadian cities, towns, and municipal authorities, before the Government of Canada.

"4. To undertake such joint activities as may be in the interests of the local governing bodies of Canada."

Submissions to the Government

On March 18, a delegation from the joint conference was received by the following cabinet ministers representing the Government: Hon. E. Lapointe, Minister of Justice; Hon. Norman McL. Rogers, Minister of Labour; Hon. T. A. Crerar, Minister of Mines and Natural Resources; Hon. C. D. Howe, Minister of Transport; Hon. J. E. Michaud, Minister of Fisheries and the Hon. Ian Mackenzie, Minister of National Defence.

The delegation discussed with these Ministers, the many problams confronting the municipalities. A number of resolutions were presented dealing with unemployment and direct relief, housing, and municipal finances, etc.

Direct Relief.—The resolution on Direct Relief declared *inter alia* that unemployment is a national emergency and national responsibility; that some provincial governments can no longer assume any responsibility for relief; that the costs had been "improperly imposed" upon the municipalities; and that as relief costs had resulted "in breaking down the financial structure of many urban centres;" and called upon the Dominion Government to "forthwith increase their grants-in-aid by such

amounts as are necessary to preserve the financial structures of the urban municipalities pending a proper redistribution of the costs of relief and of public revenues to permanently stabilize public assistance in Canada and the preparation of a scheme of work and wages to replace unemployment relief."

Finance and Taxation.—Pointing out that the duties and responsibilities of the municipalities had increased without any corresponding increase in the power to raise the revenue necessary to meet obligations, thereby incurring "serious financial difficulties;" and that there should be "a constitutional revision of all the rights" of the various governments; and that as the Dominion Government had declared its intention of appointing a Royal Commission to inquire into this distribution of functions the following recommendations on finance and taxation were submitted:

"The Dominion Government be urged to instruct and to authorize the said Royal Commission in its terms of reference to inquire into and report on the problems of the municipalities of Canada arising from the distribution of powers and functions as between the Dominion, the provinces and the municipalities, thereby relieving the municipalities and property owners to a degree that would further encourage the buying and building of homes; and

"The Parliament of Canada be urged to extend to the Bank of Canada the power to and the responsibility of assisting the Dominion, Provincial and municipal governments in financing at a minimum of expense to the taxpayers; and

"The Dominion Government in all cases of duplication of taxation on revenue be urged to undertake the collection and the distribution thereof to the provincial and municipal governments making such levy."

Housing.—Referring to the lack of facilities under the Dominion Housing Act for the provision of loans by large companies outside of the big cities, and the possibility of people in small towns and cities building homes if they were able to obtain loans under the Act, the delegation presented proposals requesting that arrangements be made "to place large and small centres and towns on an equal footing under the Dominion Housing Act;" and that "funds be made available to all municipalities for low cost housing." It was also requested that the Dominion Government "delegate to the Bank of Canada the power to lend money to municipalities for the purpose provided for in the Dominion Housing Act."

Technical Education.—Indicating the desirability for the continuation and extension of technical education in Canada and stating that "it is now proposed to greatly curtail Dominion grants for this purpose," a resolution was presented requesting the Dominion Government to continue the grants for the development of Technical Education "on at least the present scale." On this subject, Hon. Mr. Rogers, Minister of Labour, observed that if there was one field claimed by the provinces as their own it was education.

Other Resolutions

Other resolutions recommended the extension of the Farmers' Creditors Arrangement Act to urban property holders; the assumption by the Dominion Government of the responsibility for the administration and financing of public assistance to all ex-service men and their dependents; that privileges enjoyed by the Provincial Governments in the matter of Dominion Sales Tax and Excise Tax be extended to cities and municipalities; and that the Dominion and Provincial Government have complete water surveys made in various locations "in which conditions are such that action should be taken."

During the three day conference, reports were presented dealing with the proceedings (between August 11, 1936 to March 15, 1937) of the continuing committee of the Dominion Conference of Mayors, and two statistical reports prepared y the Economist of the Dominion Conference of Mayors, H. Carl Goldenberg, M.A., one of which dealt with "Municipal Debts, Interest Rates and Debt Charges in Canada" and another on "Unemployment Relief Costs in Canadian Municipalities." Discussions were held on various topics such as Unemployment Relief, Housing, Municipal Debts, and other problems confronting municipal administrations.

Mining in Nova Scotia in 1936

"The Annual Report on Mines, 1936," for the Department of Public Works and Mines, Nova Scotia, indicates that the average number of men employed at coal mines in 1936 was 13,136 as compared with 12,946 in the previous year. Total number of man-days worked for the year ended November 30, 1936, was 2,806,480, compared with 2,720,357 in the year ended September 30, 1935. A substantial increase in coal output and sales is also reported, coal output for the calendar year 1936 being 5,932,797 tons. The number of fatal accidents at coal mines during 1936 was 16, the number during the previous year being 31. Of these fatal accidents 15 occurred underground, 10 of which were causatively classified as "mine cars and locomotives," 4 as "falls of roof or face" and 1 as "mining machines." The surface accident was classified as "miscellaneous."

ALL-CANADIAN CONGRESS OF LABOUR

Summary of Proceedings of Seventh Convention

WITH an attendance of ninety-two delegates representing twenty national and chartered local unions, the seventh convention of the All-Canadian Congress of Labour was held in Toronto on March 8-10. As indicated in the address of the President, Mr. A. R. Mosher, among the primary objects of the convention was the co-ordination of labour organization on a national industrial basis throughout Canada.

By reference to the constitution and to executive reports to previous conventions, President Mosher emphasized to the delegates the basic principles and policies of the Congress. He considered it of the "utmost importance" that workers who are organized in independent national and local unions should maintain a national union centre through which to express their aims and aspirations. In this respect the president further declared that the "delegates now had the opportunity to show that we are determined to make progress in organizing the unorganized workers of Canada, and in securing improvements in their wages and working conditions." He added that "we have far more important work to do than to seek opportunities to attack rival organizations, or to vilify any group of workers because of their views on political or economic matters." In concluding, President Mosher stated that "by co-operation, tolerance, good-will and steady effort in the right direction, a great deal could be done to give the national movement the stimulus it requires."

Affiliation of Steel Workers

Featuring one of the sessions was the address of Mr. Ivan J. Campbell, president of the Algoma Steel Workers Union, in which he stated that steel workers would soon be national in scope. In submitting an application for affiliation with the All-Canadian Congress, Mr. Campbell expressed the hope that steel workers would be accepted as a national organization. The convention unanimously accepted the application for membership, and this body, formerly an independent labour unit, accordingly became identified with the Congress.

Reports and Financial Statement

In the report of the provisional committee (a body established by court order, following a division in the organization, in order to conduct the business of the congress until the present convention) appeared a review of activities during its four months' existence. Subsequently during the convention this committee was discharged, its services being no longer required.

The report of the editor and manager of the *Canadian Unionist,* official publication of the Congress, emphasized the necessity for news accounts of the activities of trade union locals. The delegates were reminded that a French section is now a regular feature of the publication.

The financial statement, covering the period ending December 31, 1936, showed assets in excess of liabilities of $1,609.09.

A number of minor amendments were made to the constitution, one of which provided for one vice-president instead of two.

Convention Addresses

Addressing the convention were Mr. George Keen, secretary of the Co-operative Union of Canada, and Mr. Fred Knowles, general secretary of the Amalgamated Civil Servants of Canada. Mr. Keen stressed the necessity of closer unity between labour unions and the co-operative movement, while Mr. Knowles dealt with the aims and objects of this civil service body.

Resolutions

The recommendations contained in the adopted resolutions were as follows:—

Adoption of an hourly rate or weekly wage as the sole basis of schedules under the Industrial Standards Act.

Developing of domestic and interprovincial trade.

Approving of the principle of old-age pensions becoming available at age 60.

Favouring annual holidays with pay for all workers.

Expressing willingness to co-operate with members of unions outside the Congress in any and every effort to better the conditions of the workers.

Protesting against the treatment received by veteran pensioners.

Approving the action of the Federal Government in restoring full rates of pay to all employees of the Civil Service of Canada.

Supporting the efforts of Canadian railway workers to obtain the abolition of their present wage deduction.

Extending the scope of the Industrial Disputes Investigation Act to include all industries and the enlarging of the conciliation facilities of the Federal Department of Labour.

Favouring the extension of consumers' co-operatives, and adopting the principles of co-operation as an important means of improving the workers' standard of living.

Re-affirming the policy of industrial unionism of the Congress

Requesting the appointment by the Federal Government of a Royal Commission, in consultation with the provinces, to consider amendments to the British North America Act.

Organizing millmen to the fullest possible extent.

Favouring an amendment to the British North America Act which will enable the Federal Parliament to pass the "Weekly Day of Rest," "Minimum Wages" and "Limitation of Hours of Work" Acts of 1935.

Granting all workers, including hourly-rated workers, a full holiday without loss of pay on Coronation Day, May 12, 1937.

Inviting the Federation of Catholic Workers of Canada to co-operate with the All-Canadian Congress in organizing the workers in the province of Quebec.

Opposing the removal of any restrictions upon immigration until such action is warranted by economic conditions in Canada.

Re-affirming the policy of the All-Canadian Congress of Labour of securing unity and harmony in the national labour movement by means of organization and education.

Expressing appreciation of the strong stand taken by the Hon. Norman McL. Rogers, Minister of Labour, in his 1937 New Year's Message, in support of the right of the workers to organize and bargain collectively, and of the efforts of Hon. Mr. Rogers and the Department of Labour to ensure the recognition of that right by employers.

Warning the workers of Canada against the rise of Fascism.

Urging the government, in the event of this country being involved in another war, to take adequate measures to prevent profiteering in any form, and that, to this end, it take over and operate industries essential to the manufacture of war material.

Giving full support to the League of Nations as an instrument of collective security.

Urging a study by the National Employment Commission of the reasons for the indicated decline in living standards.

Suggesting the appointing of a Royal Commission to study the problem of re-occurring depression periods and recommend solutions.

Urging all provincial governments to extend minimum wage laws as rapidly as possible, to extend the minimum rates and provide heavier penalties for evasions of such laws.

Election of Officers

The officers elected were: President, A. R. Mosher, Ottawa, Ont.; vice-president, C. A. Beattie, Toronto, Ont.; secretary-treasurer, N. S. Dowd, 230 Laurier Ave. W., Ottawa, Ont.

Executive board members: Ivan J. Campbell, Sault Ste. Marie, Ont.; J. Lea, London, Ont.; Mrs. M. Finch, Toronto, Ont., and G. R. Hodgson, Toronto, Ont.

NEW BRUNSWICK FEDERATION OF LABOUR

Proceedings of the Twenty-fourth Annual Convention

The twenty-fourth annual convention of the New Brunswick Federation, at which there were thirty-seven delegates present, was held at Fredericton, March 2-4, 1937.

The president and executive board presented reports covering various phases of the activities carried on during the year, and the reports also contained several recommendations which were favourably received and endorsed by the convention. The report of the secretary-treasurer showed the Federation to be in a healthy financial condition, the membership being approximately the same as for the previous year.

Joint Legislative Program

A joint legislative program of the provincial transportation brotherhoods and the Federation was submitted to the government and contained the following recommendations: Creation of a Department of Labour; regulation of motor bus and truck transportation; right of employees to organize; a conference of representatives of the government, employers and labour to consider amendments to the Workmen's Compensation Act; enactment of labour and social legislation, including amendments to the British North America Act, and a Fair Wage Act.

Convention Addresses

During the convention the delegates were addressed by Hon. A. A. Dysart, premier of the province; Hon. Dr. W. F. Roberts, Minister of Health and Labour, and Hon. F. C. Squires, Leader of the Opposition. Others who spoke were: R. J. Tallon, secretary-treasurer, Trades and Labour Congress of Canada; W. L. Best, vice-president and national legislative representative, Brotherhood of Locomotive Firemen and Enginemen; A. J. Kelly, Dominion legislative representative, Brotherhood of Railroad Trainmen, and S. H. Shaw, chairman, New Brunswick joint legislative committee of the transportation brotherhoods.

Resolutions

Among the recommendations contained in the adopted resolutions were:—

Refunding by the Provincial Government to the various municipalities of thirty per cent of all income collected from motor vehicle licences and gasoline taxes.

Employing of two licensed operators in each theatre during the time the public are admitted.

Advocating that all workers be included in the Compensation Act of all provinces.

Favouring the extension of the Compensation Act to include silicosis and tuberculosis.

Seeking protection of the legal right of workers to organize in organizations of their own choosing, without interference, intimidation, or coercion on the part of the employer or his agent, and the right of workers to collective bargaining through representatives of their own choosing, together with the imposition of heavy penalties upon employers for violation of same.

Condemning the use of "yellow dog" contracts.

Proposing proper trials of any action dealing with industrial disputes, and until such trial there shall be no temporary or interim injuncton issued.

Favouring an elevator safety code for the Dominion of Canada.

Abolishing of sand blasting.

Elimination of one-man street cars in Canada.

Placing all highway transportation under the authority and control of the Transportation Commission.

Adopting of one international union label.

Prohibiting the foreclosure of mortgage on farms and dwellings

Paying of old age pensions at the age of sixty-five years.

Supplying free school books to pupils in grades 6 to 8 inclusive.

Granting to employees an opportunity of answering all charges before being dismissed.

Urging the provincial legislature to pass enabling legislation at the present session, granting the necessary powers to the Federal Parliament to enact social and labour reforms.

Using union-made materials and supplies in preference to non-union products by all government bodies of the province.

Ensuring New Brunswick workers protection from loss of employment through importation of outside workers.

Setting a limit to the number of inexperienced workers that may be employed in any one camp, crew or other unit and the restoration of the "minimum wage" in forest operations industry.

Opposing contract work of all kinds.

Favouring due law observance of Labour Day.

Adoption of provincial Industrial Standards legislation similar to that in Ontario and Quebec.

A number of resolutions were referred to the incoming executive owing to lack of time to deal with them properly during the convention.

Election of Officers

Officers elected were: President, Jas. A. Whitebone, Saint John; vice-presidents, G. W. Roy Myles, Moncton, Richard Edgecombe, McAdam, John W. Wallace, Reynolds; secretary-treasurer, George R. Melvin, Saint John.

Wage Order of New Brunswick Forest Operations Commission

The New Brunswick *Royal Gazette* of March 17 contains wage scale Order No. 8 of the New Brunswick Forest Operations Commission. This order, which came into effect on March 20, contains the following wage provisions:

1. For stream-driving the average rate of wages paid by any employer to his employees shall not be less than three dollars ($3.00) per day and board or its equivalent in the case of piece work, provided, however, that the wages paid to cooks shall not be included in determining the average rate.

2. For booming and sorting the rate shall be twenty-eight cents per hour without board, provided, however, where board is furnished by the employer the amount charged for same shall not exceed fifty cents per day.

"Planning of Public Works in Relation to Unemployment" is the title of a report published recently by the International Labour Office. The report contains an analysis of material collected by the International Labour Office on public works carried out or planned by the central authorities of a certain number of countries. "The majority of countries," the report contends, "may now be said to have come to the conclusion that a planned public works policy, such as that recommended by the International Labour Conference in 1919 at Washington, can effectively help to regularize employment over a specified period by counterbalancing to some extent the fluctuations of private enterprise."

The expected construction boom brought on by the Home Improvement Plan will create a shortage of skilled labour in the Canadian building trades by June, Mr. Arthur B. Purvis, chairman of the National Employment Commission, stated in a speech at Montreal recently. One result would be, he said, that when the H. I. P. began to relieve the unemployment load, municipalities and business would have to grant re-training facilities to men whose skill had waned while out of work.

Wages and Hours in U. S. Building Trades

The United States Bureau of Labour Statistics has recently issued Bulletin No. 626 entitled "Union Scales of Wages and Hours in the Building Trades, May 15, 1936." According to this survey, the 1936 index of union hourly wage rates for the building trades was 5½ per cent higher than in 1933, at which time it was the lowest since 1924. During the last 3 years, the index of union hours decreased about 4½ per cent. The index of union wage rates in effect on May 15, 1936, in the 70 cities covered in the study, was 91·6, based on the 1929 rates as 100. The index of union hours was 89·8. The average rate of wages in 1936 was $1·223 per hour; the average number of hours provided for in the union agreements was 38·7 per week.

MINIMUM WAGES IN QUEBEC

Orders Governing Employment in Food Industry, Manufacture of Paper Products, and Industrial Establishments not already covered by Wage Regulations

The Minimum Wage Board of Quebec has recently issued two Orders which supersede or amend previous regulations respecting employment in the food industry (groups 1 and 2) and in the manufacture of paper boxes. In addition, an entirely new Order has been gazetted governing industrial establishments not already covered by another wage order.

Order No. 14 (provisory)—*Governing employment in the food industry:*

This order, effective from June 1, 1937, replaces Orders No. 14, 14a, 14b, and 14c (Labour Gazette, May, 1936, page 419).

Where formerly the food industry was comprised in one section, the new Order divides it into two groups, viz:

Group 1, including the making of bonbons, chocolates and confectionery; pastry, biscuits, bread, macaroni and cereals; jam, gum, crushed and evaporated fruits, syrup, pickles; canning of fruits and vegetables (excepting seasonal canneries); creameries, butter and cheese factories.

Group 2, including distilleries, breweries, manufacturing and bottling of mineral and aerated water and soft drinks; grocery's specialties; packing houses and allied industries.

Formerly, the regulation applied to females, and males when replacing females. But the new order declares all work in the food industry as women's work, and that therefore the minimum rates apply to men as well as women. This is set forth in the following section:

"For the object of this Order, and by virtue of Section 6a of the Women's Minimum Wage Act (Chap. 100, R.S.P.Q. 1925) it is decreed that all manipulations of the product from the time of its reception are considered as female labour; therefore, employees of both sexes are subject to the regulations set forth by this Order; but the calculation of the percentages shall be established separately for both women and men."

Minimum Rates.—In the former Order (14c) governing the entire food industry, the minimum rates were:

City and district of Montreal—35 per cent of employees at not less than 15 cents per hour; and 65 per cent of employees at not less than 21 cents per hour.

Province of Quebec (excepting Montreal)—35 per cent of employees at not less than 13 cents per hour; and 65 per cent of employees at not less than 19 cents per hour.

In the new Order the industry, as already indicated, is divided into two groups with a minimum wage rate for each group as follows:

Group 1

City and district of Montreal—35 per cent of employees at not less than 15 cents per hour; and 65 per cent of employees at not less than 23 cents per hour.

Province of Quebec (excepting Montreal)—35 per cent of employees at not less than 13 cents per hour; and 65 per cent of employees at not less than 21 cents per hour.

Further, it is provided that "in establishments where the regular scale of wages actually paid is higher than the minimum fixed by this Order, it is agreed that the employer shall not reduce the scale of wages until the expiration of this Order."

The provisions detailing the method of wage payments are the same as in the previous Order with the additional stipulation that wages are payable weekly, "but in exceptional circumstances, where it is the custom, they may be paid fortnightly, but not later."

In so far as female workers and boys under 18 years are concerned, the maximum working period is not to exceed 55 hours per week unless a special permit has been obtained from the Industrial and Commercial Establishments Inspection Department.

Group 2

City and Island of Montreal—15 per cent of employees at not less than 20 cents per hour; 20 per cent of the employees, at not less than 22 cents per hour; 65 per cent of the employees, at not less than 26 cents per hour.

Province of Quebec (excepting Montreal)—15 per cent of the employees at not less than 17 cents per hour; 20 per cent of the employees, at not less than 19 cents per hour; 65 per cent of the employees, at not less than 23 cents per hour.

The provisions respecting wage payment procedure are the same as in Group 1 with the same maximum hours (55 per week), but in Group 2 it is provided that "the time of experience of an employee shall be taken

into consideration in her classification. Any employee having worked an aggregate number of 2,400 hours shall not be paid less than the intermediate minimum wage of 22 cents per hour in Zone 1 (Island of Montreal) and 19 cents in Zone 2 (Province of Quebec except Montreal)."

In its other provisions the Order is similar to the one previously in effect.

Order No. 17c (provisory)—*Governing female employees and males when replacing females in any class of employment in the manufacturing of paper boxes, paper bags, wooden boxes partially made or finished with paper or cardboard; wall paper and all kinds of fibre, pulp and paper products:*

This Order comes into effect on June 1, 1937, and replaces Orders Nos. 17, 17a and 17b (Labour Gazette, May, 1936, page 420).

Minimum Rates.—The chief changes in minimum wage rates are effected by reducing the permitted percentage of lowest paid employees and increasing the hourly minimum in the higher wage groups. In the new Order, the established percentages and rates are as follows:

City and Island of Montreal—25 per cent of the employees, at not less than 15 cents per hour; 15 per cent of the employees, at not less than 19 cents per hour; 60 per cent of the employees, at not less than 23 cents per hour.

Province of Quebec (with the exception of the city and Island of Montreal)—25 per cent of the employees, at not less than 13 cents per hour; 15 per cent of the employees, at not less than 17 cents per hour; 60 per cent of the employees, at not less than 21 cents per hour.

The method of wage payment is the same as the former Order (17b) except it is stipulated that wages, are payable weekly and in special cases, fortnightly. Employees are advised to keep their envelopes "as proof whenever necessary."

The working maximum remains at 55 hours per week and overtime provisions are also as formerly, but the following new provision appears in the Order:

"The time of experience of an employee shall be taken into consideration in her classification. Any employee having worked an aggregate number of 4,800 hours, shall not be paid less than the intermediate minimum wage of 19 cents per hour in Zone 1 (Montreal) and 17 cents in Zone 2 (Province of Quebec except Montreal).

35830—3½

Order No. 25.—*Governing female employees or males, when replacing females, in any class of employment in all industrial establishments not already covered by another wage order.*

This is an entirely new order and its provisions are as follows:—

1. Minimum.—No wage shall be less than is set forth in the following schedule:—

Montreal and Island of Montreal and a radius of 10 miles around and beyond the island.

Beginners, not less than 14·5 cents per hour.

After 12 months' experience at the trade, not less than 19 cents per hour.

After 24 months' experience at the trade, not less than 23 cents per hour.

Province of Quebec, with the exception of the City and Island of Montreal and a radius of 10 miles around and beyond the island.

Beginners, not less than 12·5 cents per hour.

After 12 months' experience at the trade, not less than 17 cents per hour.

After 24 months' experience at the trade, not less than 21 cents per hour.

Local Industry.—Any industrial establishment, located in a municipality or rural district of less than 5,000 population, and employing less than ten employees (male and female) shall benefit of the following scale:—

Beginners, not less than 12 cents per hour.

After 12 months' experience at the trade, not less than 15 cents per hour.

After 24 months' experience at the trade, not less than 18 cents per hour.

Population is the population according to the latest decennial census of the Dominion Government.

2.—Maximum of Inexperienced Workers.—The number of inexperienced workers, in whatever industrial establishment governed by this Order, shall not exceed 40 per cent of the total female working force. This rule shall not apply where the female working force is less than four, they then must be paid according to their experience as specified above.

(*a*) The time of experience of an employee shall be computed upon the working hours she has worked and not upon the calendar months she has spent at the trade from the beginning of her apprenticeship. To be entitled to the intermediate minimum wage, a worker must have 2,400 hours to her credit and 4,800 hours to claim the experience minimum wage.

3.—How Wages Must be Paid.—The employee's wages shall be pad to her wholly in cash; no deduction being permitted for any cause or purpose whatsoever. Said wages be given to her in a sealed envelope on which shall be written: her name, her register number, the date of the week or of the fortnight she has worked, the number of hours she has performed, the rate per hour, the amount of money enclosed in the envelope; same must be initialed by the person who pays the employee. The wages are payable weekly, but in exceptional cases, where it is the custom, they may be paid fortnightly, but not later.

(*a*) All employees—manual and non-manual—are covered by this Order, no matter what occupation they fill or the work they perform.

The system of periodical changes from piece rates to hourly rates, or vice-versa, for same operation, is prohibited as such changes permit an illegal reduction of wages, the piece rates shall be uniform for all employees performing same operation.

4.—Hours of Work.—The total of working hours cannot in any case exceed 55 hours per week unless a special permit has been obtained from the Industrial and Commercial Establishments Inspection Department. (Chap. 182, R.S.P.G., 1925.)

Work in excess of the above period of 55 hours, shall be considered as overtime and shall be paid for at not less than time and a half; this to apply to both piece and time work.

5.—Commission Earnings.—The weekly earnings of an employee working on a commission basis or guaranteed rate plus commission or bonus, must not fall below the prescribed minimum rate as set forth in the schedule.

6.—Deduction for Absence.—No deduction below the minimum wage line for absence shall exceed the value of the time lost.

7.—Waiting Time.—Any employee required to wait on the premises shall be paid for the time thus spent.

In addition to the above, there are the usual provisions concerning exemption, discharge of employees, reference, uniforms, penalties, posting, etc.

This order is to come into force and be effective on May 17, 1937.

MOTHERS' ALLOWANCES IN MANITOBA AND NOVA SCOTIA

Manitoba

THE annual report of the Department of Health and Public Welfare, Manitoba, recently issued, reviews the administrative activities of the Department during the fiscal year ending April 30, 1935. As in former years, the report includes a survey of the activities of the Child Welfare Division administering the Child Welfare Act which is divided into several parts, each concerned with some particular phase of the protection and care of children.

During the fiscal year under review there were 249 applications for allowances, of which 171 were granted, bringing the total number of families to 1,110 and the total number of enrolled children was recorded as 3,302.

The distribution of these cases now totalling 1,110, shows that Winnipeg accounted for 322 families, Brandon, 28, Portage La Prairie, 16 and St. Boniface, 15, and 729 cases in the rest of the Province.

Neglected Children.—The administrative activities of the section of the Act relating to neglected children indicates that the number of wards in charge of the Child Welfare Division at the close of the fiscal year was 236, this division having commenced the year with 232 wards of the Director under care, 37 of whom were temporary and 195 permanent. During the year 34 new wards were received making a total of 266 under care during the year. Of these, four were adopted; 12 were discharged to their parents; 10 reached their majority; 3 married and one was accidentally drowned.

The disbursements for wards from the appropriation totalled $20,215.23; from collections on municipalities $5,018.70; from relatives and other sources, $267.91 making a grand total of $25,501.84.

Other activities under the Child Welfare Act deal with legal supervision and adoption.

Included also in the main report of the Department are the annual reports of the Welfare Supervision Board; Division of Communicable Diseases; the Division of Food Control; the Division of Sanitation; Public Health Nursing Service; Public Health Education, etc.

Nova Scotia

The seventh annual report of the Director administering the Mothers' Allowances Act in Nova Scotia for the fiscal year ending November 30, 1936, states that the total amount paid in mothers' allowances since payment began on October 1, 1930, to November 30, 1936, was $2,117,920.81.

In the period covered by the latest report a total of $363,981 was paid to 1,222 families including 3,630 dependent children.

Statistical tables included in the report show that the total number of applicants during the year under review was 256, of whom 75 were found ineligible, while 181 were approved. These 181 new beneficiaries had 605 children, the average number of dependent children per family being 3·34. The number of children over 16 years of age in the new families was 327 and their total reported monthly earnings were $1,710.25 of which $802.90 was contributed to home support. Of 83 approved applicants the families were without any property or cash assets. Of the applicants approved by the director, the number of mothers with one dependent child was 18; with two children 61; with three children, 35; with four children, 26; with five children, 12; with six children, 12; with seven children, 12; and with eight children, 5.

There were 186 cancellations during the year and 24 renewals. The sum required for the

payment of allowances in 1937 is estimated in the report as $380,835 the total required in connection with the operation of the Act during 1937 being set at $393,642.

Emphasizing the obligation of older children to help maintain the family the director says in his report: "Unfortunately there seems to be, in some cases, a disposition on the part of these older children to think only of themselves and to be too willing to leave the support of their mother and younger brothers and sisters to the State. The Commission and the Director have endeavoured, as far as possible, to regulate the amount of allowances in such a way that the beneficiaries and older children, when able to do so, must assume a fair and reasonable share of the responsibility of maintaining their homes."

HOLIDAYS WITH PAY FOR EMPLOYEES OF IMPERIAL TOBACCO COMPANY OF CANADA

The Directors of the Imperial Tobacco Company announced recently, a decision to grant annual holidays with pay to all wage earners employed by the company, its subsidiary, or associated manufacturing companies.

The regulations concerning such holidays were contained in a notice posted in the plants of the company, and are as follows:

1. Until otherwise decided by the Directors, it will be the policy of the Company to grant one week's vacation each year with pay to all wage earners who, as at December 31 in any year, commencing with the year 1936, have rendered at least eighteen (18) months continuous service to Imperial Tobacco Company of Canada, Limited, or its subsidiary or associated manufacturing companies.

2. Continuous employment will not be deemed to have been interrupted—

(*a*) by absence with leave, or

(*b*) By absence due to factory shut-down or lay-off on account of seasonal variations in employment requirements (provided that employment is resumed at termination of the cause of the lay-off, and provided that absence from such causes does not aggregate more than four months in the eighteen month period aforesaid).

3. Vacations must be taken at such times as is required by the Management.

4. When a holiday falls on a normal working day during an employee's vacation and the department in which he is employed closes down on that holiday, such holiday is to be considered as part of the vacation.

5. Employees receiving a week's vacation will be paid wages in respect of such week in an amount equivalent to 1/52nd of the total amount of wages received by such employees respectively, during the preceding calendar year, but not including any amount paid to them by way of disability allowance.

6. Prior to May 1, in each year, the factory manager will prepare by Departments, lists of employees to whom vacations have been granted, stating opposite the name of each employee, the vacation period allotted to him or her. Copies of these lists will be handed to the foremen concerned so that they may notify the employees.

7. Vacations will be allotted only between May 1 and September 30 in each year.

8. As vacations are intended to be used for rest and recreation, employees will not be permitted to waive vacations and draw double pay, or, during vacation, to substitute for another employee or to work for pay elsewhere.

The annual report of the Canadian Pacific Railway Company for the year ended December 31, 1936, states that 31,600 or approximately 70 per cent of eligible employees have already elected to participate in the revised pension plan of the Company. (Labour Gazette, October, 1936, page 910). Employees have until December 31, 1937, to so elect.

Pension disbursement for the year totalled $2,233,008 and were included in working expenses. During the year 389 employees were pensioned. The total number of pensioners at the end of the year showed an increase of 183 over the number at December 31, 1935. The report also shows that there are 1,306 pensioners over 70 years of age, 1,274 from 65 to 70 years, 255 from 60 to 64 and 110 under 60 years of age.

A delegation from the Halifax Domestic Workers' Association recently submitted before Mr. E. B. Paul, Deputy Minister of the Provincial Department of Labour, a suggested program to improve the working conditions of domestic workers.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN FEBRUARY, 1937

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on March 1 was 9,988, the employees on their pay-rolls numbering 975,862 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for February was 1,841, having an aggregate membership of 190,018 persons, 13·7 per cent of whom were without employment on March 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 66 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of work-people placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

(1) The Employment Situation at the Beginning of March, 1937, as Reported by Employers

Industrial employment at the beginning of March showed a contraction; to a considerable extent this was due to unusually large seasonal reductions in logging operations, for which weather conditions in many localities have been reported as unsatisfactory during the present winter. Returns were tabulated by the Dominion Bureau of Statistics from 9,988 employers throughout Canada, whose payrolls were reduced from 987,879 persons at February 1, to 975,862 at March 1. The crude index, based on the 1926 average as 100, stood at 102·8 at the latest date, compared with 104·1 in the preceding month, and 98·9 at March 1, 1936. The experience of the last sixteen years shows that the average change in employment between February 1 and March 1 is a comparatively small increase, gains in ten of the years since 1920 rather more than offsetting losses in the remaining six. After correction for seasonal trend, the index therefore declined, standing at 107·8 at March 1, compared with 109·9 at the beginning of February. The seasonally-adjusted index was also lower than at January 1, 1937, and was the same as at December 1, 1936; with these exceptions, it was higher than in any other month since the beginning of 1931.

Considerable improvement occurred in manufacturing at March 1, 1937, when the advance in this division slightly exceeded the average increase indicated at that date in the years, 1921-1936; the additions to staffs in leather, pulp and paper, textile and iron and steel factories were most noteworthy. Among the non-manufacturing industries, there was improvement in communications, railway construction and maintenance and wholesale trade. On the other hand, logging, as already mentioned, reported exceptionally pronounced seasonal declines, some 14,600 men having been released from the co-operating camps. Mining, transportation, building and highway construction and retail trade also showed curtailment.

For March 1, 1936, statistics had been received from 9,411 employers with a combined working force of 931,959 persons, compared with 926,888 in the preceding month. In spite of this increase, the index number then was lower by nearly four points than at March 1, 1937, when it stood at 102·8.

The index numbers of employment at March 1 in the seventeen years for which data are available are as follows:—1937, 102·8; 1936, 98·9; 1935, 96·4; 1934, 92·7; 1933, 76·9; 1932, 88·7; 1931, 100·2; 1930, 110·2; 1929, 111·4; 1928, 102·6; 1927, 97·5; 1926, 92·6; 1925, 88·1; 1924, 91·8; 1923, 91·0; 1922, 82·9 and 1921, 89·1.

Employment by Economic Areas

The trend of employment was moderately upward in Ontario, but activity declined in the remaining provinces, Quebec showing the most pronounced contraction; this was mainly due to decided seasonal losses in logging operations.

Maritime Provinces.—There was a small reduction in employment in the Maritime Provinces, where the 688 reporting employers reduced their staffs from 77,468 at February 1, to 76,826 at the beginning of March. Gains were registered in manufacturing, transportation and railway construction. On the other hand, logging was seasonally quieter, and there were decreases in mining, building and highway construction and trade. Employment at March 1, 1936, had also shown a slight falling-off; the index then was nearly five points lower than at the date under review, when it stood at 106·6. Reports for the beginning of March of last year had been tabulated from 649 firms, whose payrolls aggregated 72,582 persons, compared with 72,951 in the preceding month.

Quebec.—Employment in Quebec showed a large decrease, exceeding that recorded at the beginning of March, 1936, and also comparing unfavourably with the small gain which is the average change between February 1 and March 1 in the last sixteen years. Substantial improvement occurred in manufacturing, leather, lumber, pulp and paper, textile, iron and steel and other plants being decidedly more active; communications and railway construction and maintenance also afforded greater employment. On the other hand, logging recorded very large losses as the active season drew to a close, and there was also curtailment in mining, transportation, building and highway construction and trade. Statements were tabulated from 2,380 firms whose payrolls aggregated 284,523 employees, as against 295,957 at the beginning of February. The index, at 102·5, was several points higher than at March 1, 1936, when it stood at 95·1; the latter was computed from information furnished by 2,235 establishments, with 262,617 persons on their payrolls, a decrease of 576 from their staffs at February 1, 1936.

Ontario.—Improvement was noted in Ontario, where the 4,449 co-operating employers added 1,995 persons to their forces, bringing them to 422,980 at March 1. The trend of employment at that date in the years for which statistics are available has not invariably been upward, although the average

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

Note.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

change in the years since 1920 has been an increase exceeding that noted at the beginning of March, 1937. The index, at 108·9, was over five points higher than at the same date in 1936, when it stood at 103·8. The 4,176 firms whose returns were included in the tabulation for March 1, 1936, had employed 398,449 workers.

There was an advance in factory employment in Ontario at the date under review, the co-operating manufacturers having added 6,395 workers to their staffs. Leather, lumber, rubber, textile, iron and steel, chemical and other works showed greater activity. Among the non-manufacturing classes, building and highway construction, transportation, trade and mining were slacker, while logging showed a considerable decline as the season's operations neared completion.

Prairie Provinces.—There was a slight reduction in employment in the Prairie Provinces at March 1; the trend has been downward at that date in fourteen of the sixteen preceding years for which statistics are available, but the decline at the latest date was smaller than in any other March of the record. The index number, at 91·3, was lower than that of 95·1 at the same date in 1936, when a contra-seasonal increase over the preceding month had been shown. Data were tabulated from 1,440 establishments with 116,066 employees at the beginning of March, 1937, compared with 116,251 in their last report. Within the manufacturing industry, there was a decrease in animal food and pulp and paper factories, but improvement was indicated in the textile, iron and steel and some other divisions, resulting in a moderate gain in the group as a whole. Building and highway construction and services also showed heightened activity, while curtailment was noted in mining, transportation and trade. The 1,380 employers making returns for March 1 of last year had reported 120,280 men and women on their payrolls, compared with 118,548 at the first of February, 1936.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

(AVERAGE CALENDAR YEAR 1926=100)

—	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia

Feb. 1, 1937	104·1	107·5	106·7	108·4	91·4	91·3
Mar. 1, 1937	102·8	106·6	102·5	108·9	91·3	89·2
Relative Weight of Employment by Economic Areas as at Mar. 1, 1937	100·0	7·9	29·2	43·3	11·9	7·7

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns for the date under review.

British Columbia.—The manufacture of lumber and non-ferrous metal products showed a falling-off, while pulp and paper mills were rather busier; factory employment as a whole declined, and logging and transportation also afforded less employment in British Columbia. On the other hand, building construction recorded improvement. The working forces of the 1,031 co-operating employers aggregated 75,467 persons, as compared with 77,218 in the preceding month. The reduction was contra-seasonal, employment at March 1 in most years of the record having advanced. The index, at 89·2, was rather lower than at March 1, 1936, when it had stood at 92·4; the 971 firms then furnishing statistics had employed 78,031 workers.

Index numbers of employment by economic areas are given in Table I.

Employment by Cities

Employment increased in seven of the eight cities for which separate tabulations are made, Montreal, Quebec City, Toronto, Ottawa, Hamilton, Windsor and Winnipeg showing an upward movement, while the tendency in Vancouver continued downward. The gain in Toronto was most pronounced. The situation in Montreal, Toronto, Hamilton, Windsor and Vancouver was better than at March 1, 1936, while activity in Quebec, Ottawa and Winnipeg was at a lower level.

Montreal.—Further additions to staffs were reported, on the whole, in Montreal; there was improvement in manufacturing (chiefly in leather, textile and iron and steel factories), but transportation, trade and construction showed curtailment. Statements were tabulated from 1,377 firms employing 139,271 workers, as compared with 137,973 in the preceding month. For March of last year, 1,303 employers had reported 133,207 men and women on their staffs; the index then had been rather lower, standing at 87·5, as compared with 92·6 at the latest date.

Quebec.—Manufacturing afforded more employment, mainly in the leather and textile groups, but transportation was rather slacker and other industries showed little general change. The working forces of the 176 co-operating establishments totalled 12,371 persons, compared with 12,243 at February 1, 1937. The index was fractionally lower than

Mar. 1, 1937	92·6	92·7	103·2	99·8	103·7	146·8	90·8	103·8
Relative Weight of Employment by Cities as at Mar. 1, 1937	14·3	1·3	13·1	1·4	3·4	2·1	4·0	3·4

Note.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated city, to the total number of all employees reported in Canada by the firms making returns for the date under review.

at the same date in 1936, when a slightly larger gain had been indicated; statements were then tabulated from 168 firms with 12,359 employees.

Toronto.—Activity increased in the textile, leather, chemical and iron and steel groups, but there was a decline in food and printing and paper factories. The changes among the non-manufacturing industries on the whole were slight; transportation, construction and services released some workers, while communications and trade showed moderate improvement. Returns were received from 1,521 firms, employing 128,213 men and women at the beginning of March, as compared with 126,594 at February 1. The index, standing at 103·2, was higher than at March 1, 1936, although a larger advance had then been made by the 1,425 employers making returns, whose staffs aggregated 119,562 persons.

Ottawa.—Employment in Ottawa showed moderate improvement; construction was rather more active, while little general change was recorded in other industries. The 201 co-operating establishments reported a total payroll of 13,240 at the date under review, as compared with 13,107 at February 1. The index was slightly lower than at the beginning of March, 1936, when an upward tendency had also been indicated by the 173 firms whose data were tabulated, and who then employed 13,152 men and women.

Hamilton.—A further gain on the whole occurred in Hamilton, mainly in manufacturing, the greatest improvement being in the iron and steel industries. Trade was also rather brisker, while transportation and construction released some employees. An aggregate payroll of 33,436 persons was reported by the 291 concerns whose returns were tabulated, and who employed 32,784 in their last report. A much smaller advance had been recorded at the same date of last year, and the level of employment then was lower, the index standing at 97·1, as compared with 103·7 at March 1, 1937. For the beginning of March, 1936, 277 employers had reported staffs aggregating 31,167.

Table III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

(Average Calendar Year 1926=100)

Feb. 1, 1937	104·1	105·3	244·4	147·6	79·8	80·7	57·2	119·1	128·4
Mar. 1,	102·8	107·6	193·3	145·8	80·8	79·6	52·8	118·9	126·1
Relative Weight of Employment by Industries as at Mar. 1, 1937	100·0	55·9	5·7	6·9	2·2	9·8	6·4	2·6	10·5

Note.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated industry, to the total number of all employees reported in Canada by the firms making returns for the date under review.

Windsor.—The trend continued favourable in Windsor, where manufacturing afforded more employment, chiefly in the automobile and related industries. There were only slight changes in the other groups. Data were received from 175 establishments, with 20,041 workers, or 219 more than at February 1. Employment was much brisker than at the same date in 1936, when a decline had been recorded; the 171 firms whose statistics were received for March 1, 1936, had 15,993 employees, compared with 16,275 in the preceding month.

Winnipeg.—Heightened activity was noted in Winnipeg, where 481 concerns reported 38,885 employees, as against 38,263 in the preceding month. There was an increase in manufacturing (principally of iron and steel and textile products) and in construction, while services also showed improvement. On the other hand, trade was rather slacker. Employment was in less volume than at March 1 of last year, when a larger gain had been registered; 463 employers then reported 40,319 men and women on their staffs, compared with 39,061 at February 1, 1936.

Vancouver.—Manufacturing recorded a moderate increase in Vancouver, mainly in lumber mills, and construction was also busier; however, transportation, showed considerable curtailment and trade was not quite so active. On the whole, there was a decrease of 268 persons in the payrolls of the 436 co-operating firms, who had 33,467 employees. A similar contraction had been indicated at the same date of a year ago, when 416 employers had reported 31,012 workers; the index was then nearly seven points lower than that of 103·8 at the latest date.

Index numbers of employment by cities are given in Table 2.

Table IV.— INDEX NUMBERS OF EMPLOYMENT BY MANUFACTURING INDUSTRIES (Average 1926=100

Industries	[1]Relative Weight	Mar. 1 1937	Feb. 1, 1937	Mar. 1 1936	Mar. 1 1935	Mar. 1 1934	Mar. 1 1933	Mar. 1 1932

[1] The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns at the date under review.

Employment by Industries

Manufacturing.—The trend of employment in this group continued favourable, according to statistics furnished by 5,810 manufacturers employing 545,168 operatives, as compared with 533,739 at the beginning of February. The most pronounced recovery took place in pulp and paper, leather, textile and iron and steel plants, but the lumber, rubber, chemical, clay, glass and stone and electrical apparatus industries also showed gains. On the other hand, food, tobacco and beverage factories were slacker. The improvement in manufacturing generally was greater than that noted at the same date in 1936, also rather exceeding the average increase at March 1 in the sixteen preceding years for which statistics are available.

The crude index in manufacturing rose from 105·3 at February 1, 1937, to 107·6 at the date under review, as compared with 99·5 at March 1, 1936, and 92·7 at March 1, 1935. After adjustment for seasonal influences, the index advanced slightly, from 109·3 in the preceding month to 109·5 at the beginning of March. The seasonally-corrected index numbers in the last few months have been higher than in any other period since the early summer of 1930.

The following shows the unadjusted index number as at March 1 in the seventeen years for which statistics are now available:—1937, 107·6; 1936, 99·5; 1935, 92·7; 1934, 86·5; 1933, 75·8; 1932, 87·0; 1931, 97·6; 1930, 110·9; 1929, 115·7; 1928, 104·7; 1927, 99·8; 1926, 94·9; 1925, 88·6; 1924, 93·1; 1923, 94·7; 1922, 84·5 and 1921, 91·6.

A review of the data for March 1, 1936, shows that returns had then been received from 5,581 manufacturers, whose staffs had aggregated 501,370, compared with 495,690 in the preceding month. The index then was lower by over eight per cent than at the beginning of March of the present year.

Animal Products—Edible.—Employment in this industry showed a further moderate decrease, mainly in dairies. The index number stood at 117·8, as compared with 107·2 at March 1, 1936, when more pronounced curtailment had been noted. The working forces of the 281 reporting establishments aggregated 22,737 persons, as compared with 22,887 at February 1, 1937.

Leather and Products.—There was a considerable advance in employment in this division at the beginning of March, according to statistics from 299 manufacturers, whose payrolls included 23,258 persons, compared with 22,097 in the preceding month. The gains reported were mainly in footwear factories in Quebec and Ontario. A larger increase had been made at the corresponding date a year ago, but the index number then was rather lower than at March 1, 1937.

Lumber and Products.—The trend continued favourable in the lumber group; statements were tabulated from 842 employers, whose staffs totalled 37,910 workers, compared with 37,765 at February 1. Moderate improvement was indicated in four of the five economic areas, only British Columbia showing a general reduction. The index number was higher than at March 1, 1936, when a rather smaller advance had been reported.

Plant Products, Edible.—A decline was recorded in the edible plant product group, chiefly in sugar and syrup and bread and bakery product factories. The firms making returns to the Dominion Bureau of Statistics, 472 in number, had 29,169 workers in their employ, or 256 fewer than at the beginning of February. The Maritime Provinces, Quebec and Ontario showed a slight falling-off, while there were small gains in the Western Provinces. An advance had been indicated at the beginning of March last year, but the index number then stood at 96·7, compared with 100·4 at the date under review.

Pulp and Paper Products.—Employment in this division showed considerable improvement, chiefly in the production of pulp and paper and paper goods, while the printing and publishing division reported a slight loss; there were increases in all but the Prairie Provinces. A combined working force of 63,297 persons was recorded by 609 co-operating manufacturers, who had 62,467 employees at February 1. The situation was more favourable than in the late winter of 1936, when a smaller gain on the whole had occurred.

Rubber Products.—There was an increase in employment in rubber factories, 53 of which employed 12,887 workers, as compared with 12,420 in their last report. The index number, at 101·1, was several points higher than at March 1, 1936, when a smaller advance had been indicated.

Textile Products.—Heightened activity was registered in this group, chiefly in garment and personal furnishings, headwear, hosiery and knitting factories. Woollen and silk mills were also busier, but the cotton industry released some employees. The level of employment was higher than at March 1, 1936; the gains then reported had been on a much smaller scale. The payrolls of the 1,059 co-operating establishments aggregated 107,474 persons, as compared with 104,191 at February 1, 1937. There was especially pronounced improvement in Quebec and Ontario.

Tobacco, Distilled and Malt Liquors.—Losses in employment were noted at March 1 in beverage and tobacco factories. The general index number in this group, standing at 134·6, was slightly lower than at the same date of a year ago, when a moderate gain had been made. Data were received from 186 firms employing 18,369 workers, or 634 fewer than in their last report.

Chemical Products.—Statistics tabulated from 200 chemical plants showed that they employed 11,986 persons, compared with 11,602 in the preceding month. Employment in this industry was brisker than at March 1 of a year ago, when the trend had also been favourable.

Clay, Glass and Stone Products.—There was an increase in activity in building material plants, in which employment was at a higher level than at the corresponding date in 1936. Statements were compiled from 201 manufacturers with 8,459 employees, as against 8,152 in the preceding month.

Electric Light and Power.—Employment in plants producing electric power showed no general change, according to the 96 co-operating firms, who employed 14,190 workers. Moderate improvement in Ontario was offset by small declines in Quebec. The index number, at 112·3, was fractionally higher than at March 1, 1936, when a slight increase had been noted.

Electrical Apparatus.—Employment in electrical appliances was somewhat brisker than in the preceding month; 125 factories reported 17,578 persons on their payrolls, or 395 more than at February 1. A much smaller gain had been indicated at the beginning of March of last year, when the index number was twelve points lower.

Iron and Steel Products.—Continued advances were made in the iron and steel industry, in which employment was in decidedly greater volume than in the late winter of any other year since 1930. Practically all branches recorded improvement, the gains in the automobile and other vehicle, structural iron and steel, crude, rolled and forged, agricultural implement, heating appliance, machinery, shipbuilding, foundry and machine shop divisions being most pronounced. Returns were tabulated from 865 establishments having 132,058 persons in their employ, or 5,552 more than in the preceding month. The most noteworthy expansion was in Ontario, but the movement was favourable in all five economic areas.

Non-Ferrous Metal Products.—Smelters and refineries released employees, while the lead, tin, zinc, copper and other non-ferrous metal industries showed moderately heightened activity; 170 firms had 22,922 workers on their payrolls, as against 22,854 at the beginning of February. There were small additions to staffs in Quebec, Ontario and the Prairie Provinces, but the trend was downward in British Columbia. The level of employment was considerably higher than at March 1, 1936, although a much greater gain had then been indicated.

Mineral Products, n.e.s.—Statistics tabulated from 141 employers in this group showed a slight decrease in their forces, which aggregated 13,967. A small loss had been recorded at the corresponding date a year ago, when the index number was over nine points lower.

Logging

There were very marked seasonal contractions in logging camps, in many of which the season's operations were approaching completion; 362 firms had 55,288 men in their employ, or 14,609 fewer than in their last report. The decline involved a substantially larger number of workers than that recorded at the beginning of March a year ago, the closing of many camps being hastened by unsatisfactory weather conditions this winter. The index was many points higher than at March 1, 1936, when it stood at 147·0, compared with 193·3 at the date under review.

Mining

Coal.—Employment in the mining of coal showed a reduction, there being moderate declines in both Eastern and Western coal fields. One hundred and five operators decreased their labour forces from 25,790 persons at February 1, to 25,380 at the beginning of March, 1937. A larger loss in personnel had been indicated at March 1, 1936, and the index number was then slightly lower.

Metallic Ores.—There was a downward trend in employment in this group at the date under review. Data were received from 215 mines employing 34,294 workers, as against 34,693 at the beginning of February. The index stood at 280·6, as compared with 234·9 at March 1, 1936, when a gain had been noted.

Non-Metallic Minerals (Other than Coal).—No general change took place in these industries, according to statistics from 80 employers having 7,645 persons on their payrolls. Employment had shown curtailment at March 1 of a year ago; the index then was decidedly lower.

Communications

Additions to staffs were indicated on telephones and telegraphs; returns were received from 86 companies and branches with 21,410 employees, compared with 21,145 in the preceding month. A smaller increase had occurred at March 1, 1936, when employment was at a rather lower level.

Transportation

Street Railways and Cartage.—Statistics were tabulated from 238 employers in this division, whose staffs included 26,007 persons, as compared with 26,014 at the beginning of February. A small gain had been noted at the same date in 1936; employment was then in less volume.

Steam Railways.—A decrease was registered in steam railway operation, in which 486 fewer workers were employed than in the preceding month; 102 co-operating companies and divisional superintendents reported 57,777 persons on their payrolls. An advance had been indicated at March 1 of last year, when the index number was practically the same. Curtailment was shown at the date under review in Ontario and the Western Provinces.

Shipping and Stevedoring.—There was a slight decrease in the shipping and stevedoring group, in which employment was rather brisker than at March 1, 1936; at the date under review, 109 employers reported a staff of 11,830 persons, or 864 fewer than in the preceding month. Gains were indicated at the Eastern ports, but elsewhere the trend was downward.

Construction and Maintenance

Building.—On the whole, a contraction was reported in building activities at the beginning of March, losses in Quebec and Ontario more than offsetting increases in the Western Provinces. The 718 contractors furnishing data throughout the Dominion had 13,361 employees, as against 13,762 at February 1. The level of employment was lower than in the late winter of 1936, although a larger decline had then taken place.

Highway.—Highway construction registered curtailment at March 1, 1937, when 314 employers reported 25,429 workers, as compared with 31,177 at the beginning of February. Gains were indicated in the Prairie Provinces, while there were contractions in the other economic areas. Employment in this group at March 1, 1936, was in greater volume than at the date under review; an increase over the preceding month had then been noted.

Railways.—Employment on steam railway construction and maintenance showed a large increase on the whole, according to data received from 35 companies and divisional superintendents employing 23,672 persons, or 1,112 more than in their last report. There were increases in the Maritime Provinces and Quebec. A greater gain had been noted at the beginning of March of last winter, and the index then was higher.

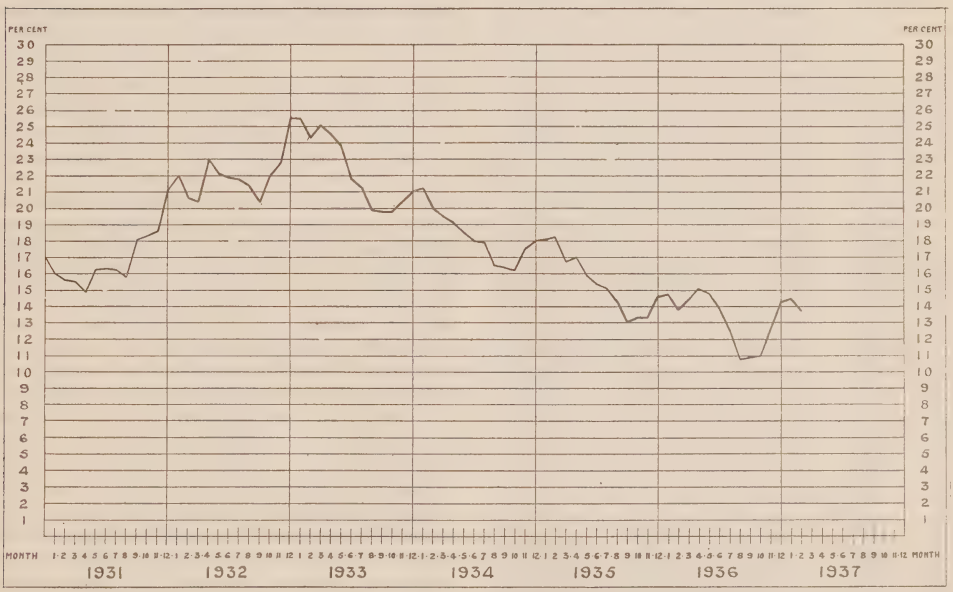
Services

A slightly smaller number of workers was employed in the service group, in which 473 establishments reported a staff of 25,909, as compared with 25,962 at February 1. Activity was rather greater than in the same month of 1936, when a moderate increase in staffs had been shown.

Trade

Retail trade reported a substantial decline, while wholesale establishments were slightly busier; the curtailment in the former was seasonal. On the whole, there was a decrease of 1,849 in the personnel of the 1,341 firms furnishing data in the trade group, who had 102,692 employees. The index stood at 126·1 at March 1, 1937, compared with 123·1 at the beginning of March, 1936, when a contra-seasonal advance had been recorded in the group as a whole.

Tables



Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns at the date under review.

(2) Unemployment in Trade Unions at the Close of February, 1937

Unemployment as used in the following article has reference to involuntary idleness due to economic causes. Persons who are occupied at work outside their own trades or who are idle due to illness are not considered as unemployed. Unions which are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

throughout the country from January though the improvement recorded was not outstanding in any one province, British Columbia with a gain of 2·3 per cent showing the greatest expansion, followed by Quebec and New Brunswick with advances of 1·6 per cent and 1·3 per cent respectively, while in Nova Scotia and Ontario the situation was but fractionally better. The recessions noted in Manitoba, Saskatchewan and Alberta however, were merely nominal. When contrasting with the returns for February of last year British Columbia, Manitoba and Ontario unions all showed unemployment advancement of

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

The trend of activity among local trade union members at the close of February was more favourable than in the preceding month, the slight gain noted being the first interruption in the consistently though slightly downward employment movement in evidence since August of last year. This was apparent from the returns tabulated for February from a total of 1,841 labour organizations comprising 190,018 members, 26,001, or a percentage of 13·7 of whom were out of work on the last day of the month as compared with 14·5 per cent in January. Conditions, however, remained approximately the same as in February of last year when unemployment stood at 13·8 per cent. With the exception of the Prairie provinces, there was a general tendency toward increased activity moderate degree during the month reviewed, and heightened activity, on a small scale, was reflected by Saskatchewan, Alberta and New Brunswick unions. Quebec unions, on the other hand, recorded rather noteworthy losses in work available, the garment, and building and construction trades particularly being important factors in this less favourable employment movement. In Nova Scotia the trend was toward retarded activity though the variation from February a year ago was quite slight.

The records of unemployment affecting local trade union members in the largest city in each province with the exception of Prince Edward Island are tabulated separately each month. Of these, Halifax, Saint John, Montreal, Vancouver and Toronto members all

were afforded a greater volume of work during February than in the previous months, the gains ranging from 5·7 per cent in Saint John to 3·7 per cent in Toronto. From Edmonton and Winnipeg slight declines in available work were registered while Regina unions reported the same percentage of idleness in both months under comparison. In contrast with the returns for February, 1936, Saint John and Toronto members showed noteworthy improvement in conditions during the month surveyed, and in Halifax, Vancouver and Winnipeg employment advancement of somewhat lesser degree was indicated. There was, however, a substantial falling-off in employment accorded Montreal members from February a year ago, and in Regina and Edmonton losses on a small scale were noted.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919	3·1	2·0	3·4	2·7	2·1	3·2	2·0	7·9	3·4

Feb., 1937	7·9	5·0	21·3	11·4	9·4	11·5	9·5	14·1	13·7

Appearing with this article is a chart which illustrates the trend of unemployment by months from January, 1931, to date. The has been in evidence for several months slightly upward tendency of the curve which past was interrupted in its progress during February the curve tracing a course slightly downward from that of January denoting a greater unemployment prevalence. The curve at the close of the month reviewed, however, remained on practically the same level as in February a year ago, there being little changes in the volume of work afforded in these two months.

The situation in the manufacturing industries during February was more favourable than in either the preceding month or February, 1936, according to the reports compiled from 512 organizations with a total membership of 65,389 persons. Of these, 8,878 or a percentage of 13·6 were idle at the close of the month, in contrast with 15·5 per cent in January and 13·9 per cent in February a year ago. Glass, and hat, cap and glove workers, and general labourers showed decidedly improved conditions over January, and a noteworthy expansion was apparent among garment workers. Among leather workers, more moderate gains occurred and the level of activity was also slightly higher for bakers and confectioners, printing tradesmen, wood, and iron and steel workers. Meat cutters and butchers, on the contrary, were considerably slacker than in January, and moderate recessions were evident among pulp and paper makers, metal polishers, jewellery and fur workers. Employment for brewery, and cigar and tobacco workers declined by less than one per cent. Textile and carpet workers maintained the same level of activity as in January. A substantially greater volume of work than in February of last year was afforded, wood, textile and carpet, hat, cap and glove, and leather workers, while advances of considerably lesser proportions were recorded by printing tradesmen, bakers and confectioners, metal polishers, cigar, and tobacco, fur, iron and steel, jewellery and brewing workers. Distinctly unfavourable conditions prevailed however, for glass workers, and in the garment trades there was a pronounced drop in work available. Among pulp and paper makers, and general labourers also, some slowing up in activity was apparent.

Minor contractions in employment were recorded in the coal mining industry during February from the preceding month. The 50 unions forwarding reports with a total of 17,864 members showing that 1,437 or a per-

centage of 8·0 were out of work on the last day of the month, contrasted with 7·0 per cent in January. Alberta members showed a 3 per cent drop in activity from January, and in Nova Scotia the variation was so slight as to be almost negligible, though tending less favourably. In British Columbia, however, some employment advancement was noted. The same level of activity was shown in coal mining, as a whole, during February as in the corresponding month of last year when 8·0 per cent of idleness also, was recorded, though fluctuations were apparent in the various provinces. In Alberta and British Columbia an upward movement of employment was indicated from February a year ago which was entirely counteracted by the slight drop in activity apparent among Nova Scotia unions. In addition to the members reported as entirely out of work during the month reviewed, a number were shown as working at considerably reduced time.

From unions in the building and construction trades, 202 reports were tabulated during February including 18,760 members, 8,074 or a percentage of 43·0 of whom were out of employment on the last day of the month in contrast with 43·7 per cent in January, and a percentage of 40·3 in February last year. Bridge and structural iron workers, and steam shovelmen registered pronounced gains in activity from January, and the situation also, showed some improvement for brick layers, masons and plasterers, granite and stone cutters, and hod-carriers and building labourers. Tile layers, lathers and roofers, and plumbers and steam fitters on the other hand indicated moderate employment losses, and recessions of minor importance were apparent among carpenters and joiners, electrical workers, and painters, decorators and paper hangers. Substantially better conditions prevailed than in February a year ago for granite and stone cutters, bridge and structural iron workers, and steam shovelmen, while among plumbers and steam fitters, also, noteworthy gains occurred. Electrical workers showed employment advances of somewhat lesser degree, and among brick layers, masons and plasterers the tendency was upward though the variation from February last year was very slight. Carpenters and joiners, and tile layers, lathers and roofers however, were much quieter than in February, 1936, and among painters, decorators and paper hangers, and hod-carriers and building labourers, some curtailment of activity was evident.

A favourable trend of employment was noted in the transportation industry, during February from both the previous month and February a year ago, though the changes were but nominal, unemployment standing at 8·0 per cent as compared with percentages of 8·2 in January and 8·4 in February, 1936. The percentage for the month reviewed was based on the returns compiled from 820 associations with an aggregate of 59,487 persons, 4,749 of whom were idle at the end of the month. Steam railway employees, whose returns constituted over 80 per cent of the entire group membership reported, showed a slight rise in work afforded from either the previous month or February last year. In the navigation division, conditions were somewhat better than in January though considerably quieter than in February, 1936. Among street and electric railway employees, the level of activity remained practically unchanged in all three months used for comparison, while among teamsters and chauffeurs the percentage of idleness recorded was identical with that of January, but fractional gains were indicated from February a year ago.

Adequate work was provided for retail shop clerks during February according to the reports received from 3 associations representing 1,004 members. In January, however, 4·8 per cent of idleness was recorded and in February last year, 1·9 per cent.

The 82 unions of civic employees making returns during February and involving a membership of 9,064 persons showed that 294 were out of work on the last day of the month, a percentage of 3·2 as compared with percentages of 3·5 in January and 5·0 in February, 1936.

Little variation was apparent in the volume of work accorded in the miscellaneous group of trades during January from the preceding month, the 133 unions furnishing reports with an aggregate of 7,045 members showing that 707 or a percentage of 10·0 were idle at the end of the month in contrast with a percentage of 10·2 in January. Theatre and stage employees, and stationary engineers and firemen showed a slight rise in available work, which was almost offset by the recessions apparent among hotel and restaurant employees, barbers and unclassified workers. A more favourable employment tendency was also noted in the miscellaneous group of trades, as a whole from February of last year when 10·4 per cent of the members were idle. In this comparison, hotel and restaurant employees, barbers, and stationary engineers and firemen were somewhat better engaged, during the month reviewed, while retarded activity on a rather small scale was evident among theatre and stage employees, and unclassified workers.

Fishermen with 3 unions reporting 571 members at the close of February indicated that 224 or 39·2 per cent were unemployed

TABLE II—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Month	Fishing	Lumbering and Logging	Mining	Manufacturing industries	Vegetable products	Pulp and paper products	Pulp and paper mill workers	Printing, publishing and lithographing	Electric current	Wood products	Fibres, textiles and textile products	Textile and carpet workers	Garment workers	Hat, cap and glove workers	Animal products	Iron and its products	Non-ferrous metals	Clay glass and stone products	Mineral products	Miscellaneous manufacturing industries	Building and construction	Transportation	Shipping and stevedoring	Steam railway operation	Local transportation	Communication	Telegraph operation	Telephone operation	Trade (retail shop clerks)	Services	Government	Miscellaneous	All occupations

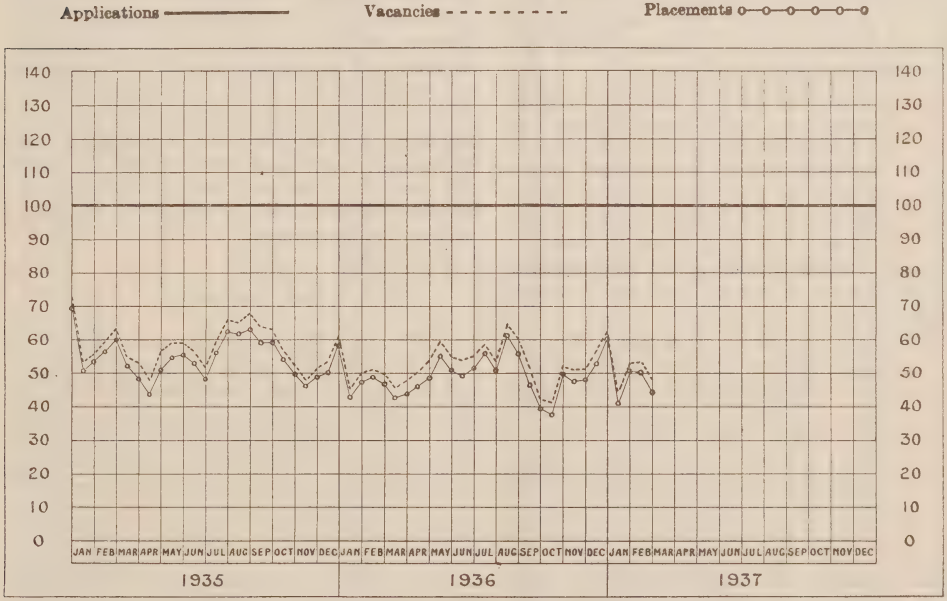
compared with percentages of 57·3 in January and 37·3 in February, 1936.



Among lumber workers and loggers the same percentage of idleness was recorded during February as in the preceding month namely 2·4 per cent. The percentage for the month under survey was based on the reports compiled from 2 associations with a total of 1,466 members. Considerable improvement was reflected from February of last year when 14·0 per cent of unemployed members were recorded.

Table I shows by provinces the percentages of members who were on an average unemployed each year from 1919 to 1936 inclusive, and also the percentages of unemployment by provinces for February of each year from 1919 to 1934 inclusive, and for each month from February, 1935, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

(3) Employment Office Reports for February, 1937

The volume of business transacted by the offices of the Employment Service of Canada during the month of February, 1937, as indicated by the average daily placements effected, showed a decline of nearly 16 per cent from that of the preceding month, but a gain of more than 2 per cent over that of February a year ago. Heavy declines from January were recorded in farming, construction and maintenance, logging and services, working day in February, 1937, than in the corresponding month last year. Losses were reported in all industrial divisions except logging, services and transportation, the substantial gain in the first named group very largely offsetting the reduction shown in construction and maintenance and a fair gain in services likewise offsetting, in part, the loss in farming. Changes in other groups, both favourable and adverse, were small.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

the gains reported in the remaining groups, trade, manufacturing, mining and transportation, being nominal and thus only slightly affecting the losses registered above. In comparison with February a year ago, although the average daily placements were higher, total placements for the period under review were slightly lower, as there was one less

The accompanying chart shows the trend of employment from January, 1935, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be noted from the graph that the curves of

vacancies and placements in relation to applications showed little variation during the first half of February, that of vacancies being slightly higher and that of placements somewhat lower than those recorded at the end of January, but during the latter half of the month under review both curves followed a marked downward course and at the close of the period had reached levels a little below those recorded at the end of February a year ago. The ratio of vacancies to each 100 applications was 53·4 during the first half and 48·1 during the second half of February, 1937, in comparison with the ratios of 51·0 and 49·7 during the corresponding periods of 1936. The ratios of placements to each 100 applications during the periods under review were 50·4 and 44·5, as compared with 48·7 and 46·8 during the corresponding month of 1936.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during February, 1937, was 1,035, as compared with 1,228 during the preceding month and with 1,000 in February a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,033, as compared with 2,527 in January, 1937, and with 1,985 during February last year.

The average number of placements made daily by offices of the Service during February, 1937, was 968, of which 632 were in regular employment and 336 in work of one week's duration or less, as compared with a total daily average of 1,150 during the preceding month. Placements for February a year ago averaged 948 daily, consisting of 552 placements in regular and 396 in casual employment.

During the month of February, 1937, the offices of the Service referred 24,615 persons to vacancies and effected a total of 23,230 placements. Of these, the placements in regular employment were 15,159, of which 10,928 were of men and 4,231 of women, while placements in casual work totalled 8,071. The number of vacancies reported by employers was 16,301 for men and 8,539 for women, a total of 24,840, while applications for work numbered 48,787, of which 36,546 were from men and 12,241 from women. Reports for January, 1937, showed 30,685 positions available, 63,173 applications made and 28,746 placements effected, while in February, 1936, there were recorded 24,983 vacancies, 49,618 applications for work and 23,687 placements in regular and casual employment.

The following table gives the placements effected by offices of the Employment Service of Canada, each year, from January, 1927, to date:—

Year	Placements		
	Regular	Casual	Totals
1927..	302,723	112,046	414,769
1928..	334,604	135,724	470,328
1929..	260,747	137,620	398,367

* (2 months.)

Nova Scotia

There was a decrease of nearly 2 per cent in the number of positions offered through Employment Offices in Nova Scotia during February when compared with the preceding month, but a decline of over 25 per cent when compared with the corresponding month of last year. Placements also were 5 per cent less than in January and nearly 29 per cent below February, 1936. A decrease in placements in the highway division of construction and maintenance was the only important decline from February of last year. This reduction was partly offset by gains in logging and manufacturing. The changes in all other groups were quite small. Placements by industrial divisions included manufacturing, 32; logging, 84; construction and maintenance, 263 and services, 252, of which 209 were of household workers. During the month 119 men and 65 women were placed in regular employment.

New Brunswick

Orders received at Employment Offices in New Brunswick during February called for nearly 25 per cent more workers than in the preceding month and nearly 7 per cent more than during the corresponding month of last year. There was an increase also in placements of nearly 23 per cent when compared with January and of nearly 7 per cent in comparison with February, 1936. Construction and maintenance was the only industrial group in which fewer placements were made than in February of last year. Of the gains in all other divisions, the largest were in logging and services. Industrial divisions in which most of the placements were effected during the month were: —logging, 47; construction and maintenance, 37, and services, 503, of which 371 were of household workers. There were 64 men and 84 women placed in regular employment.

* 910 placements effected by offices since closed.

Quebec

During February, orders received at Employment Offices in the Province of Quebec called for over 23 per cent less workers than in the preceding month, but over 44 per cent more than during the corresponding month of last year. There was a decrease in placements of nearly 27 per cent when compared with January, but an increase of 39 per cent in comparison with February, 1936. A substantial increase in placements in the highway division of construction and maintenance over February of last year was mainly responsible for the gain for the province as a whole under this comparison, although services and logging also showed improvement. The only divisions in which placements were less than in the corresponding month of last year were manufacturing, farming and trade, the losses in the two last mentioned being quite small. Placements by industrial divisions included manufacturing, 84; logging, 576; construction and maintenance, 2,549; trade, 65 and services, 2,248, of which 2,114 were of household workers. Placements in regular employment numbered 3,290 of men and 1,561 of women.

Ontario

Opportunities for employment, as indicated by orders received at Employment Offices in Ontario during February, were nearly 7 per cent less favourable than in the preceding month and over 22 per cent below the corresponding month of last year. There was a decline also in placements of 6 per cent when compared with January and of nearly 24 per cent in comparison with February, 1936. Placements under construction and maintenance were considerably less than during February of last year and small losses were also reported in services, mining and trade. The only increase of importance was in logging, although farming also showed some improvement. Small changes only were reported in all other groups. Placements by industrial divisions included manufacturing, 524; logging, 1,307; farming, 469; construction and maintenance, 1,062; trade, 250 and services, 2,823, of which 2,037 were of household workers. There were 2,686 men and 1,306 women placed in regular employment during the month.

Manitoba

There was a decline of over 40 per cent in the number of positions offered through Employment Offices in Manitoba during February when compared with the preceding month, but a gain of nearly 19 per cent in comparison with the corresponding month of last year. Placements were over 39 per cent less than in January, but 22 per cent above February, 1936. The largest increase in placements over February of last year by industrial divisions was in farming, although fair gains were also reported in logging and services. Minor changes only were reported in all other groups, except construction and maintenance, in which a loss was recorded. Industrial divisions in which most of the placements were effected during the month were: logging, 320; farming, 1,155; construction and maintenance, 349 and services, 574, of which 482 were of household workers. There were 1,800 men and 418 women placed in regular employment during the month.

Saskatchewan

The demand for workers, as indicated by orders received at Employment Offices in Saskatchewan during February was over 52 per cent less than in the preceding month and nearly 50 per cent below the corresponding month of last year. There was a decrease also in placements of over 43 per cent when compared with January and of nearly 46 per cent in comparison with February, 1936. Farm placements were considerably less than during February of last year and accounted for the decline for the province as a whole under this comparison. The changes in all other groups were small, a gain in logging being offset by losses in services and mining. Placements by industrial divisions included logging, 82; farming, 430, construction and maintenance, 134 and services, 567, of which 422 were of household workers. Regular placements numbered 556 of men and 296 of women.

Alberta

There was a decline of nearly 25 per cent in the number of positions offered through Employment Offices in Alberta during February when compared with the preceding month, but a decrease of less than one per cent in comparison with the corresponding month of last year. Placements were nearly 29 per cent less than in January and 4 per cent less than during February, 1936. The only decline of importance in placements when compared with February of last year was in construction and maintenance, but this was largely offset by gains in logging, farming and manufacturing. While there were fewer placements in all other groups, the losses were small. Industrial divisions in which most of the placements were effected during the month were:—manufacturing, 76; logging, 268; farming, 555; construction and maintenance, 546 and services, 326, of which 260 were

of household workers. During the month 1,420 men and 235 women were placed in regular employment.

British Columbia

Employment opportunities, as indicated by orders received at Employment Offices in British Columbia, were over 3 per cent better than in the preceding month and 28 per cent above the corresponding month of last year. Slightly higher percentages of gain were reported in placements under both comparisons. All industrial divisions participated in the increase in placements over February, 1936, the most important gains being in construction and maintenance, logging and services. Placements by industrial divisions included manufacturing, 46; logging, 304; farming, 75; construction and maintenance, 2,989; trade, 46 and services, 764, of which 475 were of household workers. There were 993 men and 266 women placed in regular employment during the month.

Movement of Labour

During the month of February, 1937, the offices of the Employment Service of Canada made 15,159 placements in regular employment 6,956 of which were of persons for whom the employment located was outside the immediate vicinity of the offices at which they were registered. Of the latter, 603 were granted the Employment Service reduced transportation rate, 528 proceeding to centres within the same province as the despatching office and 75 to other provinces. The reduced transportation rate which is 2·5 cents per mile with a minimum fare of $4 is granted by the railway companies to bona fide applicants at the offices of the Employment Service who may desire to travel to distant employment for which no workers are available locally.

In Quebec, during February, one certificate was granted at the Rouyn office to a bushman bound for the Timmins zone. Ontario offices were responsible for the transfer of 436 persons during February, 434 of whom travelled to centres within the province and 2 outside. Provincially, from Port Arthur, 237 bush workers, 15 mine workers, 2 waitresses, and one domestic; from Fort William, 107 bush workers, one mine worker, and one bookkeeper, and from Sudbury, 57 bush workers journeyed to employment within their respective zones. Destined to the Timmins zone were 7 bushmen sent from North Bay, 3 bushmen from Pembroke and one stationary engineer from Toronto. On a certificate secured at Windsor 2 tool-makers went to Brantford. The 2 persons going outside the province were diamond-drillers despatched by the Timmins office to Rouyn. The labour movement in Manitoba during February originated at Winnipeg and comprised the transfer of 63 workers, 6 of whom went to provincial situations and 57 to other provinces. The former were all for the Winnipeg zone and included 2 diamond-drillers, one mine carpenter, one hotel porter, one farmhand and one labourer. The Port Arthur zone was the destination of 56 persons transported outside the province, among whom were 40 bushmen, 9 mine workers, 4 teamsters, 2 mechanics and one domestic. The one remaining transfer was of a farm-hand sent to Prince Albert. Business transacted by Saskatchewan offices during February included the issue of 26 reduced rate certificates, 11 provincial and 15 inter-provincial. Within the province, the Prince Albert office shipped 3 bushmen to employment in its own zone, to which zone also were sent two teachers one from Moose Jaw, and one from Saskatoon. From Moose Jaw in addition, 2 teachers were conveyed to Swift Current. On certificates received at Regina one teacher proceeded to Weyburn and 3 teachers to situations within the Regina zone. The transfers outside the province were of bushmen despatched by the Regina office to employment in the Brandon zone. Profiting by the Employment Service reduced transportation rate in Alberta during February, 75 persons journeyed to provincial employment. All of these were destined to centres in the Edmonton zone, and included 56 bushmen, 4 mechanics, 3 cooks, 2 farmhands, one farm domestic, one miner, one carpenter, and one cookee despatched by the Edmonton office and 6 bushmen shipped from Calgary. Two reduced rate certificates were granted in British Columbia during February, the Vancouver office issuing these to farm-hands going to Kamloops.

Of the 603 persons who took advantage of the Employment Service reduced transportation rate during February, 273 were carried by the Canadian National Railways, 321 by the Canadian Pacific Railway, and 9 by the Temiskaming and Northern Ontario Railway.

(4) Building Permits issued in Canada during February, 1937

The value of the building represented by the permits issued by 58 cities stood at $2,120,111 in February, 1937; this was an increase of $424,609 or 25 per cent over the total of $1,695,502 for the preceding month, and of $198,935 or 10·4 per cent in the more significant comparison with February of last year, when the authorized building in these cities was valued at $1,921,176.

Some 50 cities furnished detailed statistics, showing that they had granted over 200 permits for dwellings valued at nearly $800,000,

and not quite 900 permits for other buildings, estimated to cost in excess of $1,200,000. In January, authority was given for the erection of some 110 dwellings and 500 other buildings, estimated at approximately $605,000 and $850,000, respectively.

Prince Edward Island, Nova Scotia, Quebec, Ontario, Manitoba, Alberta and British Columbia reported increases in the value of the permits issued as compared with January, 1937; the greatest gain, of $180,908 or 49·3 per cent, took place in Quebec. New Brunswick and Saskatchewan showed small declines in this comparison.

As compared with February, 1936, all provinces except British Columbia recorded increases, that of $608,210 or 138·6 per cent in Ontario being most noteworthy. There was a decrease of $954,295 or 80 per cent in British Columbia in this comparison.

Of the four largest cities, Montreal, Toronto and Winnipeg reported increases in the value of the building authorized as compared with either January, 1937, or February, 1936, while Vancouver showed a gain in the former, but a loss in the latter comparison.

Of the other centres, Charlottetown, Halifax, Moncton, Saint John, Quebec, Shawinigan Falls, Sherbrooke, Three Rivers, Westmount, Fort William, Guelph, Niagara Falls, Ottawa, Peterborough, Stratford, St. Catharines, St. Thomas, Sarnia, Welland, Riverside, Brandon, St. Boniface, Moose Jaw, Saskatoon, Calgary, Kamloops, Nanaimo and North Vancouver reported improvement over the preceding month, and also as compared with the same month of last year.

The table on page 443 gives the value of the building authorized by 58 cities during February, and in the first two months of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100. The average index numbers of wholesale prices of building materials in January and February of the same years are also given (1926-100).

The following table gives the value of building permits by 58 cities in January and February, 1937, and February, 1936. The 35 cities for which statistics are available since 1910 are marked thus "x."

ESTIMATED VALUE OF CONSTRUCTION WORK AS INDICATED BY BUILDING PERMITS ISSUED BY 58 CITIES

The aggregate for the first two months of 1937 was higher than in 1936, being also greater than in January-February of 1934 or 1933, while it was lower than in 1935. The total for these months in each of the last few years had been lower than in other years for which statistics for the 58 cities are available. The index numbers of wholesale prices of building materials in recent months have shown a moderately upward movement, but continue lower than in the years prior to 1930.

A preliminary estimate of Canada's tourist trade in 1936, made by the Dominion Bureau of Statistics, places the total expenditure of tourists from outside of Canada at approximately $257,000,000 and the total expenditures of Canadian tourists in other countries at about $95,000,000.

EMPLOYMENT CONDITIONS IN CANADA AT THE END OF MARCH, 1937

Reports of the Superintendents of the Employment Service

THE employment situation at the end of March, 1937, was reported by the Superintendents of the Employment Service of Canada to be as follows:—

Activities in farming in the Maritime Provinces consisted chiefly of routine work and chores. Produce at the markets over the Easter week-end was abundant with prices good and in spite of snowy weather, the making of maple sugar and syrup was taking place in many country districts. Preparations for lobster fishing progressed favourably and cod, haddock and halibut were plentiful. Logging was less active than heretofore, as many of the camps were closed and hauling of logs to the mills handicapped by lack of snow, but spool mills were sawing with night and day shifts, and large shipments of lumber were being made to the English market. Coal mines in the New Glasgow area operated from two to four days per week, while those in Cape Breton and vicinity worked from two to six days with one mine idle. No idleness, however, was reported from the iron and steel industry, although orders for railway cars were somewhat held up, due to scarcity of materials. Other manufacturing plants continued to increase their staffs and worked steady time. Little new building construction was in evidence, but that already underway was progressing favourably. Road work was brisk, with groups of men employed along the public highways chopping ice. Shipyards at Halifax and elsewhere were busy and transportation by rail, auto and water, both freight and passenger, was heavy, the extra amount of freight traffic being largely accounted for by daily shipments of coal. Trade showed improvement, particularly over the Easter holidays, with collections fair. There was the usual demand for household domestics in the women's department, and numerous placements were made.

Farming was quiet in the Province of Quebec and logging and mining activities were somewhat retarded. Improvement was noted in the aluminum industry at Chicoutimi, and in Montreal, metals, boots, shoes and clothing were fairly active, with tobacco, cigars and rubber quiet. At Quebec city, manufacturing conditions also were better. Highway construction continued, but fewer men found employment in building, particularly in Montreal. At Port Alfred, wharf repairs were being made in preparation for the opening of navigation. Transportation was very brisk at Quebec. Trade, in general, was greater in volume and a number of placements of household workers was made in the women's division.

There was an increased demand for fully experienced farm help in the Province of Ontario and every indication that the supply would meet the demand, with a tendency towards slightly higher wages during the coming season. Logging was fairly active, a few log cutters, teamsters and skidders having been placed. Saw mills also were getting ready for a busy season, as well as preparations being made for the spring drive. Mining was quiet except at Timmins. Improvement was noted in manufacturing, particularly in paint, refrigerator, washing machine, iron and steel, textile and stationery concerns. Tobacco factories, however, had completed their season's work and had reduced their staffs. Industrial

disturbances also had affected the auto and rubber industries, thus slowing down production in those lines. Building, though only fairly active for the time of year, was ahead of that for the same period of 1936, with prospects bright for a busy season as soon as weather permitted. Little road work was under way. At the various lake ports, workmen were busy outfitting and repairing boats in readiness for the opening of navigation. Orders for good housekeepers and cooks general in the women's department were received, but fully experienced applicants were scarce. Housemaids also were difficult to obtain, as with summer approaching, a great number of seasonal workers was awaiting positions in restaurants, hotels and tourist camps. A few girls were placed in industrial concerns as clerical workers and factory help.

In Manitoba and Saskatchewan, a slight increase was reported in the demand for farm help, but in Alberta, cold weather and a heavy snow fall, which brought much needed moisture to the soil, delayed the start of spring work. Wages were some higher, but many farmers did not wish to engage men until ready for them to go onto the land. Logging was much less active, as the season was about over and men were beginning to return from the camps. Continued cold weather maintained the demand for coal at Estevan, but practically all the mines at Drumheller had closed down and those at Edmonton, Lethbridge and Medicine Hat were also very slack. Manufacturing was fair. Other than alterations and repairs, little new building construction was under way. The chief placements in the construction group being those made for Provincial Government relief undertakings. Railway operation was steady at Lethbridge and trade showed improvement. Numerous orders were received in the women's division for farm domestics and experienced housekeepers and cooks general for city positions.

Requests for farm help in British Columbia were fair, due to the advancing season. Pruning was nearly completed and weather more suitable for general orchard work. Logging camps and saw mills were very busy and all larger companies were working with full crews. Improvement was noted in mining, as new territory was being opened. Factories were working at Nelson; cannery crews also were beginning to arrive at Prince Rupert from the south and seasonal work was fairly well started. Halibut hauls were very good, with prices for American, seven cents and Canadian, six cents. Considerable alteration and repair work was under way in the building trades, but general new construction was rather quiet. A few men also were sent out on extra gang work for railways. Drydocks and shipyards were active at Prince Rupert and Victoria, with the water front likewise busy at Prince Rupert and Vancouver, but somewhat slack at Victoria. In the latter city, a large number of extras had been supplied for casual work to a film company, which was making a picture in that vicinity. In the women's section, experienced domestics were scarce, with wages for good cooks general ranging from 20 to 30 dollars per month.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

THE British *Ministry of Labour Gazette*, March, 1937, summarized the employment situation as follows:—

Employment in February showed a recovery from the seasonal decline recorded in January. The industries showing the greatest improvement included building and public works contracting, the clothing trades (including boot and shoe manufacture), the cotton industry, general engineering, the motor vehicle and aircraft industry, pottery and earthenware manufacture, and shipping service. In none of the principal industries was there a marked decline in employment.

It is estimated that at February 22, 1937, the number of insured persons, aged 16-64, in employment in Great Britain, exclusive of agricultural workers, was approximately 11,187,000. This was 81,000 more than at January 25, 1937, and 662,000 more than at February 24, 1936.

Among insured workpeople, aged 16-64 (excluding agricultural workers), the percentage unemployed in Great Britain and Northern Ireland at February 22, 1937 (including those temporarily stopped as well as those wholly unemployed), was 12·2, as compared with 12·6 at January 25, 1937, and 15·3 at February 24, 1936. In Great Britain the percentage at February 22, 1937, was 11·9 as compared with 12·3 at January 25, 1937, and 15·1 at February 24, 1936.

At February 22, 1937, the numbers of persons on the Registers of Employment Exchanges in Great Britain were 1,391,932 wholly unemployed, 161,834 temporarily stopped, and 74,079 normally in casual employment, making a total of 1,627,845. This was 61,378 less than a month before, and 397,176 less than a year before. The total of 1,627,845 included 1,278,659 men, 45,535 boys, 253,666 women, and 49,985 girls.

The persons on the Registers included 1,385,171 insured persons who were applicants for

insurance benefit or unemployment allowances, 132,962 other insured persons (including insured juveniles under 16 years of age), and 109,712 uninsured persons. Of the 1,385,171 applicants for benefit or allowances, 754,823 had claims admitted for insurance benefit, and 559,216 had applications authorized for allowances at February 22, 1937; the balance of 71,132 included 40,763 persons whose position under the conditions relating to contributions paid and benefit received had not been determined, 8,762 persons who had been disqualified for short periods from receiving benefit, and 21,607 persons whose needs had been held not to justify payment of unemployment allowances.

In Great Britain and Northern Ireland the total number of persons on the Registers of Employment Exchanges at February 22, 1937, was 1,703,926, as compared with 1,766,362 at January 25, 1937, and 2,093,900 at February 24, 1936.

United States

According to a statement issued by the United States Secretary of Labor, Miss Frances Perkins, approximately 215,000 workers were returned to employment between January and February in the combined manufacturing and non-manufacturing industries surveyed monthly by the U. S. Bureau of Labor Statistics, and aggregate weekly pay rolls in these combined industries were nearly $12,500,000 greater in February than in the preceding month.

Comparisons of employment and pay rolls in February, 1937, with February, 1936, show increases of nearly 1,550,000 in number of workers and more than $62,300,000 in weekly pay rolls over the year interval in the industries surveyed.

The manufacturing industries showed the greatest gain in employment over the month interval, the increase of 2·5 per cent indicating the return of 200,000 additional factory workers to jobs. Other industries in which gains were shown were bituminous coal mining, metal mining, quarrying, crude petroleum producing, telephone and telegraph, wholesale trade, year-round hotels, brokerage, insurance, and laundries. Seasonal employment declines were shown in retail trade, dyeing and cleaning, and private building construction. Small losses were also reported in anthracite mining, electric light and power and manufactured gas, and electric railroad and motor-bus operation and maintenance.

The seasonal gain in factory employment more than offset the decline reported for January. The February employment index reached 98·9. This is the highest level since December, 1929. Factory weekly payrolls rose to 95·7. The payroll index is now at the level of April, 1930.

The durable and non-durable goods groups both shared in the February gain. Employment in the durable goods industries increased 3·2 per cent. The employment index for the durable goods group is 93·2, which is the highest level since March, 1930. Employment in the non-durable goods industries rose 1·9 per cent to a level of 105·1. This index is, with the exception of September, 1936, at the highest point reached since November, 1929. These indexes indicate that for every 1,000 workers employed in the base years (1923-1925), 932 workers were employed in the durable goods group in February, 1937, and 1,051 workers were employed in the non-durable goods group.

Manufacturing Industries

A particularly noteworthy feature of the factory employment situation is the more rapid increase in pay rolls than in employment. In February, 1933, aggregate weekly pay rolls in manufacturing industries represented only 41·0 per cent of the average weekly pay rolls during 1923-25 while employment in that month equaled 63·7 per cent of the 1923-25 average. Since that date increased plant operation and employment have accelerated the volume of weekly wage disbursements to the point where the volume of weekly pay rolls in February, 1937, is only 4·3 per cent less than in 1923-25 while employment is 1·1 per cent less than this base year average. The current figures show that the weekly pay rolls of the manufacturing industries have increased by 133·4 per cent since February, 1933. The average weekly wages of factory employees have risen by 50·3 per cent since that date.

Wage-rate increases in recent months have added to the weekly pay-roll volume. The Bureau's tabulations of wage-rate changes do not cover all establishments of the country. They include only those firms which report monthly data for inclusion in the published summaries. In some instances the co-operating firms fail to report the wage-rate changes, and therefore a slightly larger number of employees receive wage-rate increases than is indicated by the monthly tabulation. Between January 15 and February 15 wage-rate increases were reported affecting 136,968 factory wage earners and 25,469 workers in the non-manufacturing industries surveyed. The larger proportion of the employees in the latter group were in the metalliferous mining industry, in which the wage changes affected 15,781 workers.

Non-Manufacturing Industries

Among the 10 non-manufacturing industries in which employment gains were shown between January and February, the largest was in wholesale trade. The gain of 1·6 per cent, or approximately 24,100 workers, in this industry was due primarily to expansion in

such important wholesale lines as dry goods and apparel, groceries, other food products, chemicals and drugs, and machinery. A seasonal increase of 1·4 per cent in employment in year-round hotels, indicates the employment of approximately 3,500 additional workers. Metal mines continued to expand their forces in February, the gain of 4·5 per cent, or 3,300 workers, between January and February continuing the almost unbroken succession of monthly increases which have been registered since July, 1935. Employment in this industry in February, 1937, exceeded the level of any month since December, 1930. The gains in the remaining seven industries showing increases ranged from less than one-tenth of 1 per cent to 2·7 per cent.

Employment in retail trade establishments followed the usual seasonal trend in February, the combined reports received from 42,110 establishments showing a net decline of 0·6 per cent, or approximately 19,300 workers. In the general merchandising group, which is composed of department, variety, and general merchandising stores and mail-order houses, employment showed a seasonal decline of 1·7 per cent, or approximately 13,100 workers. The group of other retail establishments showed a decline of only 0·3 per cent over the month interval. While gains in employment were shown in retail food, lumber and building materials, and several other retail groups, these increases were not of sufficient size to offset the declines in wearing apparel, furniture, automotive, hardware, and other lines of retail trade. Reports from contractors engaged in private building construction showed a relatively small decrease in employment (1·2 per cent) from January to February. The February 1937, decline is much less pronounced than the decreases reported in February of preceding years for which data are available, and reflects the generally improved conditions in the building industry. Employment in this industry in February, 1937, was 54·6 per cent above the corresponding month of last year. Anthracite mines reported 2·6 per cent fewer employees in February than in the preceding month and dyeing and cleaning establishments reported a seasonal recession of 1·5 per cent.

Public Employment

In February 2,980,000 workers were employed on projects of The Works Program, a decrease of 55,000 compared with January. Of the total number of workers engaged on The Works Program in February, 2,126,000 employees, exclusive of the number employed on National Youth Administration and Student-Aid projects, were working on projects operated by the Works Progress Administration. Pay-roll disbursements in February for all workers employed on The Works Program totalled in excess of $135,000,000. The value of material orders placed amounted to more than $45,000,000.

Approximately 172,000 workers were employed on construction projects financed by the Public Works Administration in February. This was a decrease of 30,000 compared with January. Total pay-roll disbursements amounted to more than $13,000,000 and orders placed for materials to $17,000,000. Of the total number of workers employed on the program in February 89,000 were working on projects financed from E.R.A.A. 1935 and 1936 funds, 61,000 on projects financed by funds provided by the National Industrial Recovery Act, and 22,000 on projects financed from funds provided by the First Deficiency Appropriation Act of 1936.

Emergency conservation work (Civilian Conservation Corps) employed 395,000 workers in February, a decrease of 13,000 compared with the preceding month. Of the total number of workers engaged on this program in February, 346,000 were enrolled workers; 8,000, reserve officers; 2,000 educational advisers; and 39,000, supervisory and technical workers. Pay-roll disbursements totaled $18,315,000.

Construction projects financed from regular governmental appropriations employed 104,000 workers in February. This was a decrease of 16,000 compared with the number employed in January. Pay-roll disbursements for the month amounted to $11,000,000 and the value of material orders placed in excess of $10,000,000.

Employment on the construction and maintenance of State roads remained virtually unchanged in February. Of the 133,000 employed, 12,000 were working on new construction and 121,000 were engaged in maintenance. Pay-roll disbursements amounted to approximately $9,000,000.

It was recently announced that the Hamilton division of the International Harvester Company of Canada, Limited, had won the Interworks Safety contest for 1936, in the annual contest conducted by that company among its various plants in the United States and Canada. A bronze plaque was presented to the group, such awards being made each year to the winners in three sections, comprising 23 plants of the company. These awards are given to the plant showing the lowest accident severity rate (hours lost per 1,000 hours worked) in its group. It was stated that the employees of the Hamilton works had operated 2,456,831 man hours in 1936, with only six lost-time accidents, for a loss of 842 hours or a severity rate of ·34.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor the full text of which appeared in the Labour Gazette for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the Provincial Minimum Wages Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of Federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wages scales of the respective provinces.

As respects contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, were superseded in 1930, in so far as wages and hours are concerned by an Act of Parliament known as "The Fair Wages and Eight Hour Day Act, 1930." This Act, however, has now in turn been superseded by The Fair Wages and Hours of Labour Act, 1935, which came into force on May 1, 1936. The clause relating to wages and hours in the last-named statute is in the terms following:—

"All persons in the employ of the contractor, subcontractor, or any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages;

"The working hours of persons while so employed shall not exceed eight hours per day or forty-hours per week except in such special cases as the Governor in Council may otherwise provide, or except in case of emergency as may be approved by the Minister".

The new Act like the 1930 measure, applies not only to contracts made with the Government of Canada for the construction, remodeling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did not appear in the 1930 legislation, which applies the fair wages policy to works of construction, remodelling, repair or demolition that are assisted by federal grant in the form of contribution, subsidy, loan, advance or guarantee.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules known as fair wages schedules, are thereupon included by the Department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade, or fair and reasonable hours on contracts for governmental supplies and equipment, the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages

clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid out and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed, claim therefor may be filed with the Minister of the Department with which the contract has been made and payments of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Orders in Council, it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any dispute which may arise.

During the past month statements were received in the Department of Labour showing that the following contracts have recently been executed by the Government of Canada:—

Department of National Defence

Mattresses	A. Duguay, Hull, P.Q.
Barrack bedsteads	St. Louis Bedding Co., Montreal, P.Q.
Khaki drill	Montreal Cottons Ltd., Montreal, P.Q.
Winter aviation suits	S. S. Holden Ltd., Ottawa, Ont.

National Harbours Board

Contracts in Group "A" (Construction, Remodelling, Repairs, etc.)

Replacement of work-house of Grain Elevator No. 3 and reconstruction of deck of No. 3 Jetty, Vancouver Harbour, B.C. Name of contractors, Carter-Halls-Aldinger Co., Ltd., Winnipeg, Man. Date of contract, March 15, 1937; amount of contract, $647,229. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Blacksmith	0 75	8	44
Boatman	0 45	8	44
Carpenter	0 80	8	44
Compressor operator, gas or electric	0 60	8	44
Concrete mixer, gas or electric	0 60	8	44
Concrete mixer, steam	0 90	8	44
Cement and concrete finisher	0 75	8	44
Diver (full day's pay to be allowed whether employed full or part time), per day, $20.00		8	44
Diver's tender	0 68¾	8	44
Driver, horse and cart	0 60	8	44
Driver, team and wagon	1 00	8	44
Driver	0 45	8	44
Drill runners	0 55	8	44
Electrician (inside wireman)	1 00	8	44
Fireman, stationary	0 50	8	44
Engineer operating steam	0 90	8	44
Engineer on steel erection	1 00	8	44
Hoist runner, gas or electric	0 60	8	44
Hollow tile layer	1 10	8	44
Hollow tile layer helper (mixing and tempering mortar)	0 50	8	44
Jack hammer operator	0 55	8	44
Labourers	0 45	8	44
Locomotive crane operator	0 90	8	44
Millwright	0 80	8	44
Motor truck driver	0 50	8	44
Motor truck driver and truck:—			
1 and 2 tons	1 50	8	44
3 tons	2 00	8	44
4 tons	2 50	8	44
5 tons	3 00	8	44
Painter and glazier	0 80	8	44
Pipefitter (surface, temporary work)	0 65	8	44
Piledriver foreman	1 12½	8	44
Piledriver engineer	1 00	8	44
Piledriver man	0 90	8	44
Piledriver bridgeman	0 90	8	44
Piledriver fireman	0 65	8	44
Plasterer	1 00	8	44
Plasterers' helper (tempering and mixing material)	0 62½	8	44
Plumber	1 00	8	44
Pumpman	0 60	8	44
Rigger	0 65	8	44
Roofer, felt and gravel	0 50	8	44
Sheet metal workers	0 90	8	44
Structural steel workers	1 00	8	44
Shovel operator, gas	1 12½	8	44
Timberman or cribman (using interchangeably such tools as: broad-axe, saw, hammer, cross-cut saw, auger, adze)	0 90	8	44

Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Construction of an addition to the Canteen Building at R. C. N. Barracks, Esquimalt, B.C. Name of contractors, Parfitt Bros., Ltd., Victoria, B.C. Date of contract, October 13, 1936. Amount of contract, $2,489.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Brick and hollow tile layers	0 90	8	44
Brick and hollow tile layers' helpers (continuously employed mixing and tempering mortar)	0 50	8	44
Carpenters and joiners	0 70	8	44
Cement and concrete mixer operator (gas or electric)	0 55	8	44
Cement and concrete mixer operator (steam)	0 70	8	44
Cement finishers	0 60	8	44
Electricians (inside wiremen)	0 75	8	44
Lathers, metal	0 70	8	44
Lathers, wood	0 65	8	44
Painters and glaziers	0 65	8	44
Plasterers	0 90	8	44
Plasterers' helpers (continuously employed mixing and tempering material)	0 50	8	44
Plumbers and steamfitters	0 80	8	44
Plumbers and steamfitters' helpers (all men assigned to help tradesmen)	0 50	8	44
Roofers, felt and gravel	0 50	8	44
Sheet metal workers	0 70	8	44
Stonemasons	0 90	8	44
Stonemasons helpers (continuously employed mixing and tempering mortar)	0 50	8	44
Motor truck driver and truck:—			
1 and 2 tons	1 50	8	44
3 tons	2 00	8	44
Motor truck driver	0 50	8	44
Driver, team and wagon	0 85	8	44
Driver	0 45	8	44
Labourers	0 45	8	44
Watchman	0 40	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Repairs to hull, housing, boom and turntable and renewal of forward spud casings of the Dredge P.W.D. No. 116. Name of contractors, Davie Shipbuilding & Repairing Co., Ltd., Lauzon, Levis, P.Q. Date of contract, March 3, 1937. Amount of contract, $5,200.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Ship joiners	0 58	8	44
Ship carpenters	0 58	8	44
Wood caulkers	0 58	8	44
Flangers	0 58	8	44
Platers	0 58	8	44
Rivetters	0 58	8	44
Rivet holders (holders-on)	0 45	8	44
Rivet heaters	0 40	8	44
Iron caulkers	0 58	8	44
Blacksmiths	0 58	8	44
Electric welders	0 58	8	44
Painters	0 48	8	44
Labourers	0 35	8	44
Riggers	0 48	8	44
Driver, team and wagon	0 65	8	44
Driver	0 35	8	44
Motor truck driver	0 40	8	44
Motor truck driver and truck:—			
1 and 2 tons	1 40	8	44
3 tons	1 90	8	44
Watchman	0 30	8	44
Machinists	0 58	8	44

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Dredging work at North Arm, Fraser River, B.C. Name of contractors, B.C. Bridge & Dredging Co., Ltd., Vancouver, B.C. Date of contract, February 26, 1937. Amount of contract, approximately $71,400.00. The General Fair Wages Clause was inserted in this contract.

Contracts in Group "B" (Interior Fittings, etc.)

Installation of interior fittings in Postal Station "K", Toronto, Ont. Name of contractors, The Office Specialty Mfg. Co., Ltd., Newmarket, Ont. Date of contract, March 8, 1937. Amount of contract, $2,440.00. The "B" labour conditions above referred to were included in this contract.

Installation of wood fittings in the first floor of the Customs House at Halifax, N.S. Name of contractors, Canadian Office & School Furniture Ltd., Preston, Ont. Date of contract, March 9, 1937. Amount of contract, $1,254.00. The "B" labour conditions above referred to were included in this contract.

Royal Canadian Mounted Police

Contracts in Group "B" (Manufacture of Equipment & Supplies)

During the month of March, 1937, contracts were awarded by the Royal Canadian Mounted Police to: the Wood Manufacturing Co., Ltd., Ottawa, Ont., for brown drill field jackets; and to S. S. Holden Ltd., Ottawa, Ont., for brown drill field trousers.

Department of Transport

Contract in Group "A" (Construction, Remodelling, Repair, etc.)

Clearing and ditching of parts of Lots 1 and 2, in the first Concession of the Township of Mulloy and that portion of the Township of McCoig to the south of the former, for the Nagogami Intermediate Aerodrome, Ontario. Name of contractor, Mr. F. Turcotte, Kapuskasing, Ont. Date of contract, March 5, 1937. Amount of contract, $4,602.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Labourers	0 40	8	44
Axemen	0 40	8	44
Drivers and teams	0 75	8	44
Drivers	0 40	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

The Canada Gazette of March 20, 1937, contains "regulations concerning water for drinking and culinary purposes in Canadian vessels engaged in trade on the Coast of Canada." The regulations provide for the cleaning of water storage tanks, and the preparation of a chemical solution to be used in the purification of water. Conditions and practices constituting grounds for issuing "non-compliance notices" are also given in the regulations.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the department. Such agreements are summarized each month in the Labour Gazette. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Transportation and Public Utilities: Water Transportation

Vancouver, B.C.—Shipping Federation of British Columbia and the Burrard Coastwise Longshoremen's Association.

This agreement which applies to all coastwise longshore labour in the Vancouver Harbour, is in effect from March 13, 1937 to March 12, 1938, and thereafter from year to year until either party gives notice of change 60 days before March 12 of any year. The conditions relating to wage rates and working conditions may, however, be amended at any time by mutual consent.

The employment and regulation of labour, including the despatching and distribution of work shall be supervised and controlled by the Shipping Federation, but the Association may appoint a representative to co-operate with and assist the Labour Manager of the Federation. Preference of employment is to be given members of the Association when available and when considered by the employer to be capable.

Wage rates: straight time is all time between 8 a.m. and 5 p.m. Monday to Saturday inclusive; overtime is all other time including work on Sundays and 8 specified holidays. Wage rates are to be as follows:—

	Straight time	Overtime
Cement—		
Double winch drivers and shipmen and pilers	$ 0 95	$ 1 20
Dock truckers	0 85	1 05
All other commodities—		
Double winch driver	0 95	1 15
All other labour	0 85	1 05

A joint committee on safety and welfare to be established to deal with safety regulations and practices and all matters concerning safety and welfare of workers.

A labour relations committee is also to be established to settle any grievances and disputes. If they cannot agree, any matter in dispute may be referred for decision to any person or persons mutually acceptable to the parties, or they shall be referred on request of either party to an arbitrator who shall be designated by the federal Minister of Labour or by any person authorized by the Minister to designate such an arbitrator.

North Vancouver, B.C.—Shipping Federation of British Columbia and the North Vancouver Longshoremen's Association.

This agreement is in effect from February 26, 1937 to May 21, 1941, and thereafter from year to year until either party gives notice of change.

The agreement applies to the discharging and loading of deep sea vessels in the Port of Vancouver and is similar to that between the Shipping Federation and the Canadian Waterfront Workers' Association and the Vancouver Longshoremen's Association, as summarized in the Labour Gazette, August, 1936.

It is agreed that from March 31, 1937, the total membership of all three associations shall not exceed 800, of which the North Vancouver Longshoremen's Association may have 85 members, and it is also agreed that of any future increase in membership agreed upon, 10 per cent shall be apportioned to the North Vancouver Longshoremen's Association.

The basic wage rate for all labour not especially provided for was 90 cents per hour for ship work and 86 cents for dock work for straight time.

On March 27, 1937, the Shipping Federation signed a new agreement for Vancouver, raising the basic rates 5 cents per hour and these became applicable to North Vancouver, effective April 1.

Collective Labour Agreements Extension Act, Quebec

The following agreement has recently been made obligatory by Order in Council and is noted in the next article of this issue:

Barbers and Hairdressers, Virtoriaville.

Industrial Standards Act of Ontario

The following schedules have been made binding by Orders in Council and are summarized on page 456.

Bricklayers and Stonemasons, Toronto.

Carpenters, Kingston.

Furniture Industry, Province of Ontario.

COLLECTIVE LABOUR AGREEMENT EXTENSION ACT OF QUEBEC

Agreement Recently made Obligatory and Further Applications

RECENT proceedings under the Collective Labour Agreements Extension Act of Quebec include the extension by Order in Council of an agreement affecting barbers and hairdressers at Victoriaville which is summarized below. In addition a request for the extension of an agreement affecting the manufacture of sash and door factory products, interior wood fittings and equipment was published in the *Quebec Official Gazette,* March 20, and a request for an amendment to the Order in Council affecting the millinery industry was published in the *Quebec Official Gazette,* March 13.

The text of the Collective Labour Agreements Extension Act, Quebec, was printed in the Labour Gazette, May, 1934, page 417, and amendments to the act were summarized in the issues of June, 1935, page 526, July, 1936, page 607, and December, page 1127. Under this Act applications may be made to the provincial Minister of Labour by either party to a collective agreement made between, on the one hand, one or more associations of *bona fide* employees, and on the other hand employers or one or more associations of employers, to have those terms of such agreement which concern rates of wages, hours of labour and apprenticeship made obligatory on all employees and employers in the same trade, industry or business within the territorial jurisdiction determined by the agreement. The application is then printed in the *Quebec Official Gazette,* and during the following thirty days, objections may be made to the Minister of Labour. After this delay, if the Minister of Labour deems that the provisions of the agreement "have acquired a preponderant significance and importance" that would make the establishment of these conditions advisable, an Order in Council may be passed making the terms obligatory on all employees and employers in the trade, industry or business in the territory included in the agreement from the date of the publication of the Order in Council in the *Quebec Official Gazette* for the duration of the agreement. The provisions of an agreement thus made obligatory govern all individual labour contracts in the trade, industry or business and district, except that those individual labour contracts which are to the advantage of the employee will have effect unless expressly prohibited in the agreement which has been approved by Order in Council. The applications for extension of agreements have been noted and the conditions of the various agreements made obligatory by Order in Council have been given in the Labour Gazette beginning in the issue of June, 1934. Beginning with the issue of the Labour Gazette for July, 1935, the terms of agreements have been summarized instead of being printed in full.

Barbers and Hairdressers, Victoriaville.—An Order in Council, approved March 24, and published in the *Quebec Official Gazette,* March 27, makes obligatory the terms of an agreement between Le Syndicat National des Maîtres-barbiers et coiffeurs de Victoriaville (the National Association of Master Barbers and Hairdressers of Victoriaville) and Le Syndicat National des Employés-barbiers et Coiffeurs de Victoriaville (The National Union of Employed Barbers and Hairdressers of Victoriaville).

The Order in Council is in effect from March 27, 1937, to December 31, 1937, and shall be renewed automatically unless either party gives notice.

The territorial jurisdiction includes the town of Victoriaville and a radius of 20 miles from its limits except any territory already included in another agreement under this Act.

Hours for men's barbers and hairdressers: in Princeville 61½ per week, in Victoriaville, Arthabasca and places not otherwise specified 59½. Hours for ladies' hairdressers (male and female workers) 53 per week from September to March inclusive and 61 from April to August inclusive.

Minimum wage rates: barbers and men's hairdressers $14 per week with a commission of 50 per cent of all receipts over $25 taken in by the barber during the week, or $18 without any commission; female hairdressers $8 per week. Prices are set for each piece of work to be paid barbers or hairdressers employed by the hour or by the job.

Apprenticeship rules are included in the agreement providing that not more than one apprentice be employed in any one parlour. Wage rates for apprentices are set, beginning with $6 per week after six months work in a shop. The joint committee is to settle the other apprenticeship regulations.

INDUSTRIAL STANDARDS ACT OF ONTARIO

Schedule of Wages and Hours Recently Approved by Orders in Council

THE Industrial Standards Act of Ontario, the text of which was printed in the Labour Gazette, June, 1935, page 534, with amendments in the issue of May, 1936, page 410, provides that the Minister of Labour for Ontario may, upon petition of representatives of employees or employers in any industry, convene a conference or series of conferences of employees and employers in the industry, in any zone or zones to investigate the conditions of labour and practices in such industry and to negotiate standard rates of wages and hours of labour. The employees and employers in attendance may formulate and agree upon a schedule of wages and hours of labour for all or any class of employees in such industry or district. If, in the opinion of the Minister a schedule of wages and hours for any industry is agreed upon in writing by a proper and sufficient representation of employees and of employers, he may approve of it, and upon his recommendation, the Lieutenant-Governor in Council, may declare such schedule to be in force "during pleasure" or for a period not exceeding twelve months stipulated in the schedule and thereupon such schedule shall be binding upon every employee and employer in such industry in the whole or any part of the province designated by the Minister, such schedule not coming into effect until ten days after publication of the Order in Council in *The Ontario Gazette.* The Minimum Wage Board has authority to enforce the provisions of the Act and of the regulations and schedules. Beginning with the July, 1935, issue of the Labour Gazette, summaries are given in this article of the schedules which have thus been approved.

Bricklayers and Stonemasons, Toronto.—An Order in Council dated February 27, and published in *The Ontario Gazette*, March 6, makes binding a schedule of wages and hours affecting the bricklaying and stonemasonry trades in a zone which includes the City of Toronto and the surrounding district which is defined in the Order in Council.

The Order in Council is in effect from March 16, 1937 to March 1, 1938, and the terms are similar to those in the previous schedule which was summarized in the Labour Gazette, December, 1936, page 1182.

The minimum wage rate remains at 90 cents per hour with a 40 hour week.

Carpenters, Kingston.—An Order in Council, dated March 31, and published in *The Ontario Gazette*, April 3, makes binding the terms of a schedule governing the carpentry trade in a zone which includes the City of Kingston and the surrounding district as specified in the Order in Council.

The schedule is in effect from April 13, 1937, "during pleasure."

The schedule does not apply to employees of manufacturing or industrial plants while engaged in manufacturing processes or who are regularly engaged in repair, service and upkeep of the establishment.

Hours: 8 per day, 4 on Saturdays, a 44 hour week, for day work: 8 per day for night work.

Overtime is permitted only between 5 p.m. and 8 p.m. on Monday to Friday inclusive, and for work required after noon Saturday in order to permit the pouring of concrete, and on work necessary for the protection of life or property. Such overtime to be paid at time and one-half. Work on Sundays and six specified holidays double time.

Minimum wage rate: 80 cents per hour (an increase of 5 cents per hour over the previous rate) for day work and for work of not more than 8 hours which cannot be done during a regular day. In case of shift work, persons on night shifts to be paid a minimum of 91 cents per hour or 8 hours' pay for 7 hours work.

A special minimum rate may be established by the Advisory board for any person who is handicapped by age or disability.

Furniture Industry, Province of Ontario. An Order in Council dated March 31, and published in *The Ontario Gazette*, April 3, makes binding the terms of a schedule governing the furniture industry throughout the Province. The previous schedule in effect under this Act until June 30, 1936, was summarized in the Labour Gazette, August, 1935, page 736. Following failure to agree on terms of the renewal of this schedule a strike was called (page 410). A compromise settlement was reached and a schedule made binding under the Industrial Standards Act which may be summarized as follows:

The schedule is in effect from April 13, 1937 to March 31, 1938.

The whole province of Ontario is now included. (In the previous schedule Toronto was not included). The province is divided into two zones. Zone B, includes the cities of Toronto, London, Woodstock, Kitchener, Guelph, Hamilton, St. Thomas and Stratford and areas adjacent to them. Zone A consists of the rest of the province.

The furniture industry is defined to consist of the manufacture or fabrication of all wood products commonly known as furniture for houses, offices, schools, churches, theatres, institutions and public buildings, radio cabinets and frames for upholstered goods.

Regular hours are unchanged at 8½ per day, 4½ on Saturdays, a 47 hour week for day work and a 47 hour week also for night shifts.

Overtime and work on nine specified holidays, time and one-half.

Wages: employees who have commenced or who commence to work in a plant while under 21 years of age and have not had four years' employment in such plant are to be paid a minimum of 18 cents per hour during first year of employment, 21 cents during second year, 24 cents during third year, 27 cents during fourth year.

The total of all such employees that may not exceed 20 per cent of the total number of employees in the plant or 25 per cent in the case of plants in which more than 50 per cent of production consists of wooden chairs. (In the previous schedule the minimum rate for boys was 17 cents). After fourth year they must be classed as skilled, semi-skilled or unskilled employees.

In Zone A, the average rate of wages in each plant for all skilled, semi-skilled and unskilled workers (except those provided for above) shall be 37 cents with a minimum rate of 47 cents for skilled employees, 37 cents for semi-skilled and 32 cents for unskilled. (These are increases of 2 cents per hours for skilled and semi-skilled and 4 cents for unskilled workers over the previous rates).

In Zone B, the average rate of wages in each plant for all skilled, semi-skilled and unskilled workers (except those beginning before 21 years of age as noted above) is for both the average and for minimum rates for each class, 2 cents per hour higher than in Zone A. (These minimum rates for skilled, semi-skilled and unskilled workers are 2 cents per hour higher than those previously in effect).

In computing the average rate of wages in any plant the wages paid to a Superintendent, Manager or foreman or any person granted a special rate as noted below are not to be considered.

The Advisory Board may, upon request, and after investigation, fix a special rate for any employee whose work is below the average.

PRICES, RETAIL AND WHOLESALE, IN CANADA, MARCH, 1937

Cost of Living, Prices of Staple Articles and Index Numbers

The cost per week of the family budget in terms of retail prices was little changed from that of the previous month, while the Dominion Bureau of Statistics index number of wholesale prices advanced substantially, due mainly to higher prices for iron and steel products, grains, lumber and non-ferrous metals.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of average retail prices in sixty-nine cities was $8.49 at the beginning of March, the same figure as for February, as compared with $8.12 for March, 1936; $7.63 for March, 1935; $6.67 for March, 1933 (the low point in recent years); and $11.67 for March, 1930. Price changes were of a minor nature except for another substantial advance in potatoes. Other increases were recorded in bread, flour, rolled oats and beans. Meats, eggs, butter and cheese were somewhat lower in price. Including the cost of fuel and rent with that of foods the total budget cost $17.13 at the beginning of March; $17.12 at the beginning of February; $16.63 for March, 1936; $16.10 for March, 1935; $15.41 for June, 1933 (the low point in recent years); $21.96 for March, 1930; $20.96 for March, 1922; $26.92 for July, 1920 (the post-war peak); and $14.35 for March, 1914. Fuel was practically unchanged and no changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics advanced week by week during the month and for the week ended March 26 was four per cent higher than for the week ended February 26. The figures are 86·3 and 83 respectively. The increase was due mainly to higher prices for grains, iron and steel products, lumber and non-ferrous metals. The iron and steel group advanced 7·5 per cent during the month under review to the highest point since 1925, while farm products were 5·7 per cent higher, due chiefly to increased prices for grains and live stock. The latest figures available on a monthly basis are for February when the index was 82·9 as compared with 72·4 for March, 1936; 71·9 for March, 1935; 63·5 for February, 1933 (the low point in recent years); 95·6 for March, 1929; 98·3 for March, 1922; 164·3 for May, 1920 (the post war peak); and 64·7 for March, 1914. Prior to June, 1936, this index number had indicated relative stability in wholesale prices for more than two years following the advance of several months' duration from the low point of recent years reached early in 1933. Since June, 1936, the index has advanced twenty per cent and since the recovery in prices commenced in 1933 nearly thirty-six per cent. The increases in both these comparisons have been much greater in raw and partly manufactured goods than in fully and chiefly manufactured goods, greater also in producers' goods than in consumers' goods.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of March of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The price of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the Labour Gazette, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amount due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which figures were available when the publication of retail prices statistics was begun, that is for January, 1910, in the Labour Gazette for February, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles com-

paratively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number of rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

Retail Prices

Meat prices averaged slightly lower during the month. Sirloin steak was down in the average from 24 cents per pound in February to 23·6 cents in March, shoulder roast of veal from 14·9 cents per pound to 14·4 cents, fresh pork roast from 21·2 cents per pound to 20·5 cents and breakfast bacon from 29 cents per pound to 28·6 cents. Egg prices were again lower in most localities, fresh grades being down from an average price of 31·6 cents per dozen to 29·8 cents. This is more than 8 cents per dozen lower than in March, 1936. Creamery butter also was generally lower, the Dominion average price being 29·9 cents per pound in March and 30·8 cents in February.

†The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

‡For the week ended March 26, 1937, monthly figures not yet available.

*Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

(Continued from page 458)

The price of bread was again fractionally higher at 6·8 cents per pound in March as compared with 6·2 cents in March, 1936. Dry beans averaged 7·5 cents per pound in March, 7·2 cents in February and 5·4 cents in March, 1936. Potatoes were considerably higher in most cities, the Dominion average price being up from $1.81 per ninety pounds in February to $1.98 in March. The price of anthracite coal continued practically unchanged in the average.

Following are the prices reported for Welsh coal, "cobbles" and "French nut"—Halifax, $15.50; Charlottetown, $12.90; Moncton, $15.50; Saint John, $14; Quebec, $13; Three Rivers, $15 and $14; St. Hyacinthe, $14; Montreal, $13.25 and $13.50; Ottawa, $15.25; Kingston, $14.50; Belleville, $15; Peterborough, $15.75; Oshawa, $14.75; Toronto, $14.50 and $14; St. Catharines, $15; Hamilton, $14.50 and $14; Brantford, $16.50; Galt, $16; St. Thomas, $16; Sudbury, $16.75; Cobalt, $18; Timmins, $18; Port Arthur, $17.25; Winnipeg, $20.

As a result of reports by the Division of Women in Industry and Minimum Wage, and material presented at a public hearing in New York in February and other data submitted, the Industrial Commissioner of the State of New York, issued Order No. 2 (effective May 1, 1937) prohibiting industrial homework in the men's and boys' neckwear industry. The Commissioner issued the order stating that "the increasing employment of homeworkers in the men's and boys' neckwear industry has resulted in a lowering of wage rates and decline in employment for factory workers, and that the continuance of unrestricted homework jeopardizes wage and labour standards in the industry."

35830—6

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE accompanying tables, which appear quarterly, give the official and certain other index numbers of cost of living, retail and wholesale prices in Great Britain and several of the principal commercial and industrial countries. The following notes afford information as to recent changes in prices according to groups of commodities in several of these countries.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1930=100, was 103·9 for February, an increase of one per cent for the month. Decreases were recorded in all three food groups while industrial materials, with the exception of wool and the chemicals and oils groups, showed advances.

The *Statist* index number, on the base 1867-1877=100, was 101·7 at the end of February, an advance of 2·5 per cent for the month. Advances were recorded in every group except vegetable food, the greatest change in any one group being a rise of 7·7 per cent in minerals, chiefly copper, tin and lead.

COST OF LIVING.—The Ministry of Labour's index number, on the base July, 1914=100, was 151 at the beginning of March, showing no change from each of the four previous months. Each group was unchanged from the February level.

Germany

WHOLESALE PRICES.—The index number of the federal Statistical Office, on the base 1913=100, was 105·5 for February, an advance of 0·2 per cent for the month. The greatest change recorded in any group was a rise of 6·9 per cent in non-ferrous metals.

COST OF LIVING.—The official index number, on the base 1913-1914=100, was 124·8 for February, an increase of 0·2 per cent for the month due to slight advances in food and clothing prices.

India

WHOLESALE PRICES.—The index number of the Labour Office, Government of Bombay, on the base July, 1914=100, was 104 for January, an advance of 3 per cent for the month. All groups except three which were unchanged, and sugar which was slightly lower, showed increases over the November level.

COST OF LIVING.—The official index number of the working class cost of living at Bombay, on the base July, 1914=100, was 104 for February, showing no change from the previous month's level.

United States

WHOLESALE PRICES.—The Bureau of Labour Statistics index number, on the base 1926=100, was 85·9 for January, an advance of 2 per cent for the month, the upward movement extending to each of the ten groups. House-furnishing goods and farm products showed the greatest increases.

COST OF LIVING.—The index number of the National Industrial Conference Board, on the base 1923=100, was 87·2 for February, a rise of 0·3 per cent for the month, with advances in all groups except food. This is an advance of 4·4 per cent over February, 1936, and of 21·6 per cent over the low point reached in April, 1933, but is still 12·9 per cent below the 1929 level.

(a) Average for year. (b) First of month. (c) Middle of month until August, 1933; thereafter this index number is calculated fortnightly and the figure given in this table is for the date nearest to the middle of the month. (d) Cost of weekly family food budget. (e) Figure for previous month. (f) Figure for following month. (g) Quarter beginning in specified month. (h) Highest category workmen's household. (i) December.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Petition for Order to Require Railroad Brotherhood to Revise Seniority List Rejected

On November 18, 1936, Mr. Justice Denis of the Superior Court of the District of Bedford in Quebec gave judgment in an action for an order from the Court requiring the defendants, the Brotherhood of Railroad Trainmen and the local lodge of the Brotherhood at Farnham, to revise the seniority list of the members of the lodge so as to give the plaintiff as a trainman in passenger service from December 19, 1914, seniority over all persons engaged as trainmen in mixed passenger and freight service and, in particular, over certain persons named in the statement of claim.

It is pointed out in the judgment that the agreement between the Canadian Pacific Railway Company and the Brotherhood set out the rules governing seniority of trainmen but that the company "is the only power having authority to adjudicate as to the plaintiff's rank and seniority" and the defendant Brotherhood could only make a recommendation to the company concerning the seniority rights of the plaintiff.

Moreover, the plaintiff had not taken advantage, within the time limit, of the right accorded to him by the agreement or by the rules of the Brotherhood to appeal to the latter for action in the matter. On the evidence, the Court found that the persons ranking before the plaintiff were entitled to such seniority.

Finally, it was held, following the judgment of the Supreme Court of Canada in *Society Brand Clothes* v. *Amalgamated Clothing Workers of America* (1931), that as the defendants, the Brotherhood of Railroad Trainmen and the local lodge of the Brotherhood are unincorporated bodies with no legal existence, they cannot be sued in their common name. The action was dismissed with costs to the plaintiff.

Audette v. *Brotherhood of Railroad Trainmen and Missisquoi Lodge No. 371, District of Bedford, Superior Court No. 941.*

Judgment in Quebec Minimum Wage Case

The Quebec Court of King's Bench allowed on February 26, 1936, an appeal by the defendant in an action for $351.35 alleged to be the difference between the amount of wages at the rate fixed in the order by the Quebec Minimum Wage Commission for the fur industry and the amount received by the plaintiff. The plaintiff was employed by A. Hollander and Sons, Ltd., from April 18, 1934, to May 16, 1935, at a wage less than the minimum fixed for the fur industry.

The defence contended that the industry carried on by the defendant company was that of tanning and dyeing skins and was an industry quite distinct from that known as the "fur industry" which involves the use of fur in the making of clothing. On December 20, 1935, the Superior Court ordered the defendant to pay the sum of $268.20 with interest and costs. On appeal, the argument of counsel for the defence distinguishing between the two industries was accepted and the appeal allowed with costs to the plaintiff.

It was pointed out by the Court that if the plaintiff had consulted the Minimum Wage Commission, she would have been informed that the order relating to the fur industry did not apply to her employment.

An order covering the leather industry including the preparing and dyeing of hides and skins was issued by the Minimum Wage Board of Quebec on March 21, 1936. The order governing the fur industry was issued in December, 1931, and in the evidence before the court, the inspector for the Minimum Wage Board stated that the order governing the fur industry was not intended to apply to the dressing and dyeing of skins. *A. Hollander and Sons, Ltd.* v. *Mlle. Barbatie* (1937) Rapports Judiciaires de Quebec, Cour du Banc du Roi, 258.

Damages Awarded Against Certain Members of Lumber and Sawmill Workers' Union, No. 2601 by Supreme Court of Ontario

On January 21, 1937, the Ontario Court of Appeal allowed an appeal from the judgment of Judge Byers of the District Court of Rainy River in an action for damages against the Lumber and Sawmill Workers' Union, Local 2601 and three individual defendants, the president, secretary and a member of the local union.

The plaintiff, who was not a member of the union, claimed $500 damages and costs on the ground of unlawful conspiracy to deprive him of his position with the J. A. Mathieu Ltd., and an injunction restraining the defendants from interfering with his employment. Employed for the past six years with the company, the plaintiff alleged that the defendants, by threatening his employer with a strike, brought about his dismissal.

The defendants contended that they acted in pursuance of an agreement between the union and the company which stipulated that only members of the union should be employed. It was further contended that the union was not a legal entity capable of being

sued and as its agents no action lay against them.

On October 7, 1936, Judge Byers dismissed the action against the union and against the personal defendants with costs. On appeal the Supreme Court of Ontario reversed this decision as regards the individual defendants and gave judgment for $238.45 with costs.

Tereschuk v. Lumber and Sawmill Workers' Union, No. 2601, and Sauve, Connor and Mills, Supreme Court of Ontario, Janury 21, 1937.

Vocational Rehabilitation of Handicapped Persons in the United States

"Vocational Rehabilitation of the Physically Handicapped" is the title of a bulletin (No. 190) issued recently by the Office of Education, United States Department of Labor. In a foreword to the bulletin it is pointed out that the program of promotion by the Federal Government of the United States of the vocational rehabilitation of persons disabled in industry or otherwise and their return to civil employment was inaugurated on June 2, 1920, when Congress passed the Industrial Rehabilitation Act. Prior to that date, it is stated, six states had established a service of rehabilitation. At the present time, 45 states, Hawaii, Puerto Rico, and the District of Columbia have state rehabilitation acts providing for co-operation with the Federal Government. These rehabilitation departments co-operate with agencies such as those of workmen's compensation, welfare, health, and labour, and with numerous private agencies connected with rehabilitation work.

The Industrial Rehabilitation Act of the United States provides for promotion by the Federal Government of vocational rehabilitation of persons disabled in industry or otherwise and of their return to civil employment.

The first section of the bulletin discusses the origin and development of the rehabilitation movement, presenting an historical and descriptive sketch of the development of Federal and State legislation. In the second section, a general description of the whole program of vocational rehabilitation in its broader aspects is given under the following topics: Theory of Federal Aid to the States; Federal and State Relations; Scope and Extent of the Service; and Present Status of the Work in the Country. The third section deals with the principles and methods by which vocational rehabilitation is accomplished, the section closing with a description of the technique of case procedure in vocational rehabilitation.

The fourth section of the bulletin is devoted to a discussion of a state program of rehabilitation, showing its relation to other state services, its purposes and functions, scope and extent, organization, administration, and the co-operation of the state rehabilitation service with other agencies. The fifth section covers the Federal program of promotion, its organization and methods of administration, and concludes with a statement of present and future needs.

The bulletin indicates that the number of persons rehabilitated has steadily increased from 523 in the fiscal year 1921 to 9,422 rehabilitated persons in the fiscal year 1935. Since the inception of the national program up to the end of the fiscal year 1935, over 77,000 disabled persons have been refitted or retrained for, and established in, self-supporting employment. The bulletin states that "at the present time about 40,000 persons are in the process of rehabilitation in the States." In 1935 Federal funds expended on this work amounted to $1,031,818 and State funds $1,216,129. The cost per case in 1934 (the latest figure given in the bulletin) was $245. Commenting on this aspect of the work the bulletin states: "It has been demonstrated for a number of years that it is possible to rehabilitate a disabled person at a total cost on the average of about $300. This cost is significant when it is realized that in most of the States it costs from $300 to $500 a year to maintain a dependent person in an almshouse or similar institution."

THE LABOUR GAZETTE

PREPARED AND EDITED BY
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 37] MAY, 1937 [NUMBER 5

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

ACCORDING to data tabulated in the Dominion Bureau of Statistics from 9,987 establishments, employment at the beginning of April showed a small, contra-seasonal advance, the reported staffs aggregating 978,913 persons, compared with 976,535 in the preceding month. The statistics furnished by leading firms since 1920 show that in all but one of these preceding years, employment at April 1 has experienced a between-seasons' contraction, ordinarily resulting from the completion of the winter's work in logging camps, before any considerable numbers of persons have been absorbed into the outdoor industries opening up in the spring and summer. The increase in the number employed in the Dominion as a whole at the beginning of April, 1937, was entirely due to improvement in British Columbia, where the reported additions to staffs more than offset the moderate losses elsewhere indicated. The index (based on the 1926 average of 100) rose slightly from 102·8 at March 1 to 103·0 at the beginning of April; at the same date in preceding years of the record, it was as follows: 1936, 97·4; 1935, 93·4; 1934, 91·3; 1933, 76·0; 1932, 87·5; 1931, 99·7; 1930, 107·8; 1929, 110·4; 1928, 102·3; 1927, 97·4; 1926, 92·5; 1925, 88·3; 1924, 90·4 1923, 88·7; 1922, 81·8 and 1921, 85·1.

There was a large increase at April 1 in manufacturing, especially of lumber, textile and iron and steel products. The mining of metallic ores and of non-metallic minerals (except coal), building and highway construction and maintenance, services and trade also showed improvement. On the other hand, logging camps reported very decided seasonal reductions, and there were declines in railway construction and maintenance and coal-mining.

Unemployment in trade unions.—At the beginning of April the percentage of unemployment reported to the Department of Labour by local trade unions was 12·9 as compared with 13·7 per cent at the beginning of March, and 14·5 per cent at the beginning of April, 1936. The April percentage was based on the reports received from 1,851 labour organizations with an aggregate of 188,047 members.

37719—1½

Employment Office Reports.—The reports of the Department of Labour from the offices of the Employment Service of Canada showed that the volume of business transacted during March, 1937, as indicated by the average daily placements, was nearly 8 per cent below that of the preceding month but about 5 per cent above that recorded during March, 1936, construction and maintenance showing the greatest decline under the first comparison and logging the highest gain under the second. Vacancies in March, 1937, numbered 25,126, applications 50,848, and placements in regular and casual employment 22,353.

Prices.—In retail prices the cost per week of a family budget of staple foods, fuel and lighting, and rent was $17.18 at the beginning of April as compared with $17.13 for March; $16.33 for April, 1936; $15.97 for April, 1935; $15.41 for June, 1933 (the low point in recent years); and $21.53 for April, 1930. In wholesale prices the weekly index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 declined week by week during April, being 85·1 for the week ended April 30 as compared with 86·9 for that of April 2. The downward movement was due mainly to lower prices for non-ferrous metals, and grains. On a monthly basis the index number was 85·5 for March, 1937; 72·2 for April, 1936; 72·5 for April, 1935; 63·5 for February, 1933 (the low point in recent years) and 94·5 for April, 1929.

The table on page 476 gives the latest information available reflecting industrial conditions in Canada. The index of the physical volume of business recorded a substantial advance in March, following a downward movement of several months duration. The index in the month under review was still lower than for last September and October but was about fourteen per cent higher than in March, 1936, and three per cent higher than in the previous month. Of the principal factors used in the construction of the index mineral production, manufacturing and exports were lower than in February, while construction electric power output, trade employment, carloadings, and imports were higher. All of the above men-

*Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

†For the week ended April 30, 1937.

(1) Calculated from yields of Canadian bonds. (2) For group figures see articles elsewhere in this issue.

(3) Adjusted for number of business days and seasonal variations.

(4) Figures for end of previous month.

(5) Figures for four weeks ending May 1, 1937, and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending April 24, March 27 and February 27, 1937; April 18, March 21 and February 22, 1936.

(7) MacLean's Building Review.

(8) Index numbers are adjusted when necessary for seasonal variation.

tioned groups were higher in March, 1937, than in March, 1936. Information available for April shows the index number of wholesale prices to be somewhat lower than in March, while carloadings, employment and construction contracts awarded recorded advances.

Strikes and Lockouts.—The number of strikes and lockouts on record during April was 38, involving 13,097 workers, with a time loss of 148,677 man working days as compared with 21 disputes in March, involving 5,382 workers and a time loss of 37,088 days. Most of the time loss was due to strikes of automobile factory workers at Oshawa, Ont., dressmakers at Montreal, P.Q., and longshoremen at three lake ports in Ontario. In April, 1936, there were 17 disputes, involving 1,909 workers, with a time loss of 14,424 working days. Of the thirty-eight disputes recorded for April, twenty-one were recorded as terminated, four resulting in favour of the employers affected, seven in favour of the workers involved, while compromise settlements were reached in ten cases. Seventeen disputes, involving approximately 5,000 workers, were recorded as unterminated at the end of the month. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or definitely declared terminated by the unions involved.

Industrial Disputes Investigation Act

During the past month the Department received the unanimous report of the Board of Conciliation and Investigation appointed to investigate the matter of a dispute between the Canadian National Railways and its clerks and various other classes of employees, members of the Canadian Brotherhood of Railway Employees.

Other proceedings under the Act included the submission of eight applications for the establishments of boards, six of which were from employees of the Corporation of the City of Winnipeg. One application—from checkers and coopers employed on the Montreal wharf of the Canada Steamship Lines, Limited—was subsequently withdrawn after further negotiations and conferences with officers of the department.

Details of proceedings and the text of the Board report will be found in the section commencing on page 483.

Supplement on World Textile Conference

With this issue of the Labour Gazette there is being published a supplement which deals comprehensively with the proceedings at the tripartite conference of the textile industry, held recently in Washington under the auspices of the International Labour Organization, on the invitation of President Roosevelt. Included in the supplement are the various reports on the industry, which were adopted, and the addresses of the Canadian delegates.

Canadian Delegation to International Labour Conference.

The Honourable Norman McL. Rogers, Minister of Labour, announced recently the appointment of a delegation which will attend the Twenty-third Session of the International Labour Conference (League of Nations), which is to be held in Geneva opening on June 3. The delegation comprises delegates and advisers on behalf of the Dominion Government and on behalf of Canadian employers and workpeople respectively, and is made up as follows:—

Government Delegates:

Dr. W. A. Riddell, Resident Canadian Advisory Officer to the League of Nations, Geneva.

Mr. W. M. Dickson, Deputy Minister of Labour, Ottawa.

Advisers to Government Delegates:

Mr. C. R. McIntosh, M.P., North Battleford, Sask., Chairman of the Committee of the House of Commons on Industrial and International Relations.

Mr. Norman S. Dowd, Ottawa, Secretary-Treasurer of the All Canadian Congress of Labour.

Mr. Alfred Charpentier, Montreal, General President, La Confédération des Travailleurs Catholiques du Canada, Inc.

Mr. Zenon David, Montreal, President of the Canadian Federation of Labour.

Employers' Delegate:

Mr. A. R. Goldie, Galt, Ont., President of Goldie & McCulloch Co., Ltd., and Chairman of the Industrial Relations Committee of the Canadian Manufacturers' Association.

Adviser to Employers' Delegate:

Mr. H. W. Macdonnell, Toronto, Secretary of the Industrial Relations Department, Canadian Manufacturers' Association.

Workers' Delegate:

Mr. Robert J. Tallon, Ottawa, Secretary-Treasurer of the Trades and Labour Congress of Canada, and President of Division No. 4 of the Railway Employees' Department, American Federation of Labor.

Advisor to Workers' Delegate:

Mr. D. W. Morrison, Glace Bay, N.S., Vice-President of the Trades and Labour Congress of Canada, and President of District No. 26, United Mine Workers of America.

In accordance with procedure followed in recent years, the nominations for employers' delegate and adviser were made by the Canadian Manufacturers' Association, and the nominations for the workers' delegate and adviser by the Trades and Labour Congress of Canada.

The International Labour Organization in Geneva, which forms part of the machinery of the League of Nations, was established, under the authority of the Treaties of Peace adopted at the close of the Great War, with the object of securing the improvement of industrial conditions by legislative action and international agreement. The International Labour Conference is the annual gathering which brings together representatives of government, employers and of workers from the sixty-two member states of the Organization, including all of the important industrial countries of the world, excepting Germany, which gave up membership in the International Labour Organization on retiring from the League of Nations a couple of years ago. The United States and Japan, although not members of the League of Nations, are members of the International Labour body.

The agenda of the forthcoming Conference in Geneva comprises the consideration of proposed international conventions on the following subjects:—

1. Safety provisions for workers in building construction with reference to scaffolding and hoisting machinery.
2. Reduction of hours of work in the textile industry.
3. The planning of public works in relation to employment.
4. Reduction of hours of work in the printing and kindred trades.
5. Reduction of hours of work in the chemical industry.
6. Revision of existing minimum age conventions in industrial and non-industrial employment, in order to raise the age limit from fourteen to fifteen years.

An invitation has been extended to the provincial governments to be represented at this Conference but it is not known as yet what appointments, if any, may be made by the provincial authorities.

Estimate of Total Relief Expenditure in Canada 1931-1936

Exclusive of expenditures on social services such as old age pensions, mothers' allowances, hospitals, public health, etc., the total relief disbursements (Dominion, provincial, and municipal) amounted to approximately $635,000,000 during the six fiscal years 1931 to 1936 according to an estimate in the April issue of the Statistical Summary published by the Bank of Canada.

It is explained that this approximation of relief expenditures was compiled from public accounts and budget speeches of the Dominion and provinces, from annual reports of certain cities, and from various other official sources. In many cases complete information was not available and estimates were made. Fiscal periods were adjusted, where necessary, to years ending March 31.

By fiscal years ending March 31, the aggregate totals were estimated as follows: 1931—$20,000,000; 1932—$90,000,000; 1933—$95,000,000; 1934—$105,000,000; 1935—$155,000,000; 1936—$170,000,000; making for the six years a grand aggregate of $635,000,000.

No attempt was made by the Bank of Canada statisticians to estimate beyond March 31, 1936.

The division of the $635,000,000 total expenditure was approximately as follows: Public Works (including Dominion outlays for railway relief projects), $231,000,000; agricultural relief and aid (including net loans to farmers for seed, fodder, repairs, etc.), $42,000,000; direct relief and miscellaneous relief, $361,000,000.

Further reduction in grants-in-aid

By Order in Council of April 29, the interim Dominion grants-in-aid to the provinces to assist in relief expenditures during April, May and June was fixed at a total of $1,839,500 per month—a reduction from the previous quarter of $506,157.35.

As previously outlined in the LABOUR GAZETTE, relief grants-in-aid were initiated in August, 1934, and involved the outright payment of fixed monthly sums to assist the provinces—and through the provinces, the municipalities—with their relief expenditures. By agreement, these payments are subject to revision every three months.

The disbursements for the grants-in-aid during the last three quarters of the fiscal year ending March 31, 1937, were at the rate of $2,345,657.35 monthly, having been reduced 15 per cent on April 1, 1936, with a further reduction of 10 per cent on July 1, 1936.

The original grant-in-aid, which obtained from August 1, 1934, to December 1, 1935, was at the rate of $1,751,250 per month, or $88,250 less than the grant of $1,839,500 per month for the current quarter.

Re-training program for unemployed veterans

Establishment of a scheme of probational training and re-conditioning of unemployed war veterans for employment was authorized recently by federal Order in Council. At the last session of Parliament the

Department of Pensions and National Health was voted a sum of $250,000 "to provide for the payment of allowances to veterans during a limited period of probational training under arrangements with prospective employers."

Regulations governing the provisions of such training have been drawn up by the Department of Pensions and National Health and the Veterans Assistance Commission, and in a circular letter, released on May 7, to District Administrators and Honorary Local Committees under the Commission, the details of the program are announced. The scheme is open to Canadian and Imperial veterans, including pensioners who served in a theatre of actual war during 1914-1918, and "who are found to require a period of training to fit or demonstrate fitness for a vacancy which promises a reasonable hope of continuation of employment or the completion of training."

Trainees are to be selected by the Honorary Local Committees from those veterans registered with the Employment Service of Canada on the Veterans Assistance Commission.

The section relating to training remuneration states:—

"Before the commencement of training an arrangement shall be entered into with the employer and the Honorary Local Committee whereby the employer will agree to pay some portion of the salary or wage of the position. The balance shall be paid by the Department (Pensions and National Health) provided such does not exceed $50 per month. The period of training may, as the individual case requires, extend from a few days to a maximum of three months and the departmental allowance shall cease whenever the employer takes the trainee on at a fair salary or wage."

The memorandum points out that the success of the scheme "depends on the utmost co-operation between the Honorary Local Committee, the Employment Service of Canada, the recognized veterans' organizations, the employer, and the district offices of the department." It is also emphasized "that every care must be exercised in obtaining placements and there must be no possibility of the scheme being looked upon as a means of obtaining some cash allowance by the veteran or of obtaining cheap labour by the employer."

Loans under Dominion Government Home Improvement Plan

According to figures issued recently by the Hon. J. L. Ilsley, acting Minister of Finance, loans under the Dominion Government's home improvement plan have increased by almost $600,000 in value during the first two weeks of April, the number of loans increasing by 1,526.

The grand total of loans at April 15 was 7,819, amounting to $2,985,458 in value.

Provincially, the number of loans, with the values in brackets are as follows: Prince Edward Island, 70 ($26,350); Nova Scotia, 791 ($253,130); New Brunswick, 389 ($141,006); Quebec, 1,336 ($672,438); Ontario, 2,885 ($1,054,484); Manitoba, 345 ($125,829); Saskatchewan, 232 ($71,446); Alberta, 699 ($278,862); and British Columbia, 1,072 ($361,911).

Trades Union Act of Nova Scotia

Prominent in the labour legislation of Nova Scotia was a measure known as the Trades Union Act. The Bill as introduced made it "lawful for employees to bargain collectively with their employer or employers, and to conduct such bargaining through a trade union and through the duly chosen officers or representatives of such trade union."

It was also declared unlawful for any employer to impose any condition of employment restraining any employee from exercising his rights under the Act. Intimidation on the part of a person, firm or corporation to prevent an employee from joining a union was designated as an offence against the Act punishable by a fine not exceeding $100, or thirty days' imprisonment.

Similar provisions are contained in an Act recently passed in Alberta.

Amendment to Nova Scotia Workmen's Compensation Act

A Bill was recently introduced in the Nova Scotia Legislature, implementing recommendations made by the Royal Commission appointed to investigate the operation and enforcement of the Workmen's Compensation Act of that province. (A review of the Royal Commission's report appears elsewhere in this issue.)

Among the major amendments in the Bill is the provision for the increase in rates of payment to permanent totally disabled workmen from 60 per cent of average weekly earnings (upon which compensation is based) to 66⅔ per cent of the workman's average weekly earnings during the twelve months previous to the injury. Where permanent partial disability results from an injury the new legislation provides a weekly payment of 66⅔ per cent of the difference between the average weekly earnings of the workman before the accident and the average amount which he is able to earn in some suitable employment after the accident, and such compensation is to be payable during the lifetime of the workman.

The amount of compensation to which an injured workman is to be entitled for temporary total or permanent total disability is not

to be less than $8 per week, or where his average earnings are less than $8 per week, the amount of such earnings. For temporary partial or permanent partial disability, provision is to be made that a corresponding amount is to be paid in proportion to the impairment of earning capacity.

The amending bill also provides for increasing the amount upon which compensation is based from $1,200—the present rate—to $1,500.

The lumbering industry will be excluded from the increased compensation "until the Governor in Council so orders and declares."

Provision for the payment of compensation to the person taking care of a workmen's children, where death results, from injury and no widow survives, would also be made under the amendments.

The bill also implements other recommendations made by the Commission such as those regarding "notice of accident," medical fees, extension of medical aid period, lump sum payment of compensation to injured workman whose impairment did not exceed 10 per cent of his earning capacity, etc.

Quebec prohibits child labour and provides Mothers' Allowances

Major measures in social legislation enacted during the present session of the Quebec Legislature included the prohibition of the employment of persons under sixteen years in designated industrial or commercial establishments; and an Act providing for Mothers' Allowances.

The object of the child labour Bill—called "an Act respecting the welfare of youth—is to enable the Lieutenant-Governor to prohibit:—

(*a*) "Work by boys and girls under sixteen years of age in the industrial or commercial establishments designated by him; and

(*b*) "With respect to such dangerous work as he may designate, the employment of boys and girls of less than eighteen years of age."

The Act, which is to be administered by the Minister of Labour, provides penalties for violations.

Bill No. 21 is designed to grant assistance to needy mothers in the cases where the husband is dead or hospitalized on account of mental disorder "in order to assist such mothers in keeping them with their children under sixteen years of age and in providing for their maintenance and education."

Manitoba Legislation for Prevention of Strikes and Lockouts

An Act to prevent Strikes and Lockouts in Industry was passed by the Manitoba Legislature during its recent session, repealing the Industrial Conditions Act, 1919. The new statute, of which a detailed summary is given elsewhere in this issue, is somewhat similar to the Industrial Disputes Investigation Act passed by the Parliament of Canada in 1907, but applies to disputes in industries to which the Dominion statute does not apply. The Dominion law, as a whole, covers only disputes in transportation, communication, mines and public utilities.

The Minister of Labour of the Province is empowered to appoint a board of conciliation and investigation upon application of either party to the dispute or of his own motion, or to appoint some person to conduct an inquiry and endeavour to bring about an amicable settlement. The findings of a board are not binding on the parties unless they previously agree to be bound. After application for a board has been made a strike or lockout is prohibited until the application has been refused or the report of the board has been delivered to the parties to the dispute.

The Act reproduces from the Industrial Conditions Act sections recognizing the right of employers and employees to organize for any lawful purpose and to bargain with one another individually or collectively. It is made an offence, punishable by fine, to seek by intimidation or threat to compel any employee to join or refrain from joining any union or voluntary association of employees.

Inquiry into Alberta Workmen's Compensation Act

On April 7, Premier William Aberhart of Alberta placed a resolution on the order paper recommending the establishment of a committee of the Assembly "for the purpose of receiving representations and recommendations as to the operations of The Workmen's Compensation (Accident Fund) Act and the amendment thereof."

The resolution also proposed that the committee would meet for purposes of the investigation during the interim between prorogation of the session and the next ensuing session"; and that the said committee do report to this assembly the substance of the representations and recommendations made to the committee, together with such recommendations relating to the administration of the said Act, or to the amendment of the said Act as to the said committee seems proper."

The Workmen's Compensation (Accident Fund) Act of Alberta was last revised in 1932 (LABOUR GAZETTE, June, 1932, page 660) following the report of a Special Committee of the Legislature appointed during the previous session (LABOUR GAZETTE, April, 1931, page 389). At that time, the opinion was expressed that no further revision of the Act would be required for a period of five years.

Referendum on Health Insurance in British Columbia

Reference was made in the Labour Gazette for March (page 263) to the postponement of the health insurance scheme in British Columbia (The provisions of the Act establishing a contributory system of health insurance was reviewed in the Labour Gazette, May, 1936, pages 422-3).

It has now been decided to place the matter before the electors at the general provincial election in the form of a referendum.

In an announcement headed—"To the electors of British Columbia"—the Hon. T. D. Pattulo, premier of the province, sets forth the situation respecting health insurance in part, as follows:

"Sumptuary laws are difficult of enforcement unless preponderantly supported by public opinion.

"In the light of circumstances, the Government has thought it wise to test public opinion upon the question of health insurance before proceeding further, and for this reason, is submitting the question to the electors for an expression of opinion.

"Those who may come within the scope of health insurance measure must necessarily be those who make contribution thereto.

"The care and treatment of those unable to make any contribution is a separate question.

"The matter of the care of the indigent will be reviewed and endeavour made to more effectively provide for their care and treatment.

"The question of health insurance to be submitted to the electorate should therefore be viewed entirely apart from consideration of treatment of the indigent, and solely as concerning those contributing to the scheme.

"The Government is in favour of a health insurance measure, but will be guided by the decision of the electorate in its future action.

"The following is the question which it is proposed to submit.

"Are you in favour of a comprehensive health insurance plan progressively applied?"

Extension of pensions to salaried persons in Great Britain

Legislation introduced recently in the British Parliament is designed to provide a voluntary contributory pensions scheme for the so-called "white collar" workers. It extends the benefits of the state insurance system to a large number of people in the small and medium income class who are not eligible for the protection now accorded manual workers under the compulsory scheme which came into operation eleven years ago.

As outlined in the *London Times* the new scheme provides voluntary insurance to persons not compulsorily insured, whether working on their own account or not, provided that the total income of a man when entering into insurance—the test does not apply afterwards—is not over £400 a year, and that the income of a woman is not over £250. In each case the income from all sources, earned and unearned, must be taken into account, and half the income may be "unearned" in the sense in which the term is used for income-tax purposes. Various classes will become eligible to participate—small shopkeepers, farmers, professional people such as music teachers, clerks receiving more than £250 a year, and ministers of religion whose emoluments and private resources do not together exceed the limits fixed in the Bill. There is an age limit for entry into the scheme, and, in the ordinary practice, it will be forty; but for twelve months admission will be open to all whose age does not exceed fifty-five. For those who enter in this first year there will be a flat-rate contribution of fifteen pence a week for men and of six pence for women. These rates are the actuarially computed contributions for men and women of twenty-one for pensions payable at the age of sixty-five and continuing until seventy, at which age the beneficiaries will become entitled to old-age pensions of like amount, without any test of means, provided entirely by the State. After the first year contributions will vary with the age of entry, up to a maximum of 2s. 11d. a week for a man of forty.

Although the scheme will be self-supporting in the end, there will be a long period in which State assistance will be required.

Survey of World Unemployment Situation

In previous issues, the Labour Gazette has referred to the quarterly survey of employment and unemployment as published in "Industrial and Labour Information" issued by the International Labour Office (Labour Gazette, February, 1937, page 129; November, 1936, page 978, etc.)

For four years the statistics of unemployment have shown a regular decrease in the majority of countries for which information is available. "Industrial and Labour Information" for April 12, 1937, states that "the improvement has never before appeared so widespread" as that reflected in the figures for the first quarter of 1937.

In almost all countries, the number of registered unemployed has decreased as compared with the corresponding period of 1936. In Belgium, Czechoslovakia, the Netherlands and the United Kingdom, the decrease shown by the unemployment insurance statistics is greater than three months ago. In Austria the increase in unemployment noted

three months ago has given place to a decline. In Switzerland, where the situation grew steadily worse throughout 1936, a considerable decrease in unemployment as compared with last year is now shown. In France, the number of applicants for employment, which was still rising six months ago and was stationary three months ago, now shows a marked decrease.

The favourable impression made by the statistics of unemployment is fully confirmed by the employment figures; a considerable increase in employment being recorded in all countries for which such statistics are available. The International Labour Office, in presenting these statistics of employment and unemployment, again emphasizes the limitations of such figures and states that they only serve as an indication of the trend of employment and unemployment in the countries concerned.

Statistics based on unemployment insurance schemes indicate declines in unemployment ranging from 6·0 per cent in Switzerland to 0·2 per cent in Denmark. The United Kingdom registered a decrease of 3·1 per cent over the corresponding period of 1936.

Unemployment statistics obtained from returns made by trade unions indicate declines in unemployment ranging from 4·8 per cent in the United States to 0·3 per cent in Canada. Other decreases were 3·0 per cent in Australia, 4·4 per cent in Norway and 3·5 per cent in Sweden.

Statistics based on social insurance schemes, show improvement in indices of employment ranging from 10·7 in Yugoslavia to 3·7 in Belgium over the corresponding period of 1936. Other increases in employment indices were Czechoslovakia, 5·9, Great Britain, 6·3, Hungary, 6·8, Latvia, 8·4, and the Netherlands, 4·4.

Returns from selected establishments also reflect the widespread improvement in the world employment situation. In all countries reporting, indices of employment advanced, the advance ranging from 21·0 in Estonia and 18·6 in Bulgaria, to 3·5 in Switzerland and 2·4 in France. The index of employment based on returns from selected establishments in Canada showed an improvement of 4·7 over the corresponding period of 1936. The improvement in other countries was registered as follows: Japan, 7·7, Luxemburg, 2·7, Norway, 7·0, Poland, 6·8, South Africa, 9·9, Sweden, 5·4 and the United States 9·2.

NOTE.—More recent and detailed statistics dealing with the employment situation in Canada are given in the article (four sections) entitled "Employment and Unemployment in Canada in March, 1936" to be found elsewhere in this issue.

New Coal Control Legislation in U.S.A.

Reference was made in the LABOUR GAZETTE of June, 1936, page 479, to the decision of the United States Supreme Court in declaring unconstitutional federal regulation of the coal industry as provided under the Bituminous Coal Conservation Act of 1935 (the Guffey Act). Legislation replacing this measure finally passed both Houses of Congress and was signed by President Roosevelt on April 12.

With the exception that the labour provisions (the chief reason for its invalidation by the Supreme Court) have been eliminated, the Bituminous Coal Act of 1937 is practically the same as its predecessor. The new legislation is mainly confined to price fixing and regulation in the bituminous coal industry with the regulatory provisions more clearly defined in their operation to inter-state commerce in coal.

Further claims of the Factories Bill (Great Britain) have been recently approved. These embody a variety of general safety provisions, including elevators, floors, stairs and passages, tackle, fire escapes, etc. A summary of the Bill was given in the LABOUR GAZETTE for February, page 129, and March, page 320.

A proposal to enact legislation to establish a plan for superannuation of urban municipal employees at the present session of the Saskatchewan Legislature but suspend operations for a year until an actuarial survey had found it sound, was made before the municipal law committee of the Legislature recently by the Hon. T. C. Davis, attorney-general.

First Convention of Canadian Seamen's Union

The first convention of the Canadian Seamen's Union, an affiliate of the International Seamen's Union, was held recently in Toronto. Delegates of seamen's organization from Great Lakes ports and the Maritimes were present. The convention decided to urge upon the Government the necessity of adopting for seamen the eight-hour day Convention, of the I.L.O. Besides the eight-hour day request, the seamen propose to file agreements with steamship companies asking for the 1929 scale of wages or $10 a month over existing rates. The convention also decided to seek amendments to the Canadian Shipping Act compelling all vessels to carry wireless instead of only those of 5,000 tons or more. It will also be requested that all vessels use the Plimsoll line.

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

EIGHT applications for the establishment by the Minister of Labour of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour during the month of April.

Checkers and coopers, employed on the Montreal wharf by the Canada Steamship Lines Ltd., submitted the first application during the month. These workmen, approximately 50 in number, are members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. They desired to negotiate an agreement with the company respecting wages and working conditions. Officers of the Department discussed this matter on various occasions with the respective parties and held several joint conferences with them. At the final conference in Montreal on April 29 an adjustment was reached and the applicants agreed to withdraw the application for a Board.

Six applications were submitted by the following employees of the Corporation of the City of Winnipeg: (1) approximately 50 waterworks supply workers, members of the Waterworks Operators Union; (2) approximately 50 linemen, cablemen, pitmen, groundsmen, etc., members of the Linemen and Underground Mechanical Employees Unit (Civic Employees), One Big Union; (3) approximately 50 high pressure pumpmen, pump house employees, electricians, maintenance men, etc., members of the Electrical and Mechanical Workers' Unit, Federation of Civic Employees; (4) approximately 400 clerical employees and meter readers of the hydro electric and water works systems, members of the Clerical Branch of the Federation of Civic Employees; (5) approximately 180 employees of the Winnipeg Hydro Electric System, being members of the Winnipeg, Pointe du Bois and Slave Falls Units of the Union of Hydro Electrical Workers; (6) approximately 35 diggers, air compressor men and joint-makers, members of the Water Works (Diggers) Unit (Civic Employees), One Big Union. In each of these cases, with the exception of the last mentioned, the employees seek cancellation of certain wage reductions now in force; in two or three instances they also desire certain changes in working conditions. In the sixth case mentioned the employees (diggers, air compressor men and joint-makers) request an increase in the hourly wage rates.

An application was also received from approximately 50 employees of the Winnipeg Electric Company, being members of Locals Nos. 1037 and 435, International Brotherhood of Electrical Workers. These employees seek cancellation of the 9 per cent wage reduction now in force; also an increase in the wage rate of foremen and a change in the clause respecting holidays.

Report of Board in Dispute Between the Canadian National Railways and Its Clerks, Etc.

The report of the Board of Conciliation and Investigation in the matter of a dispute between the Canadian National Railways and its clerks and various other classes of employees who are members of the Canadian Brotherhood of Railway Employees, was received in the Department of Labour on April 12. The Board was composed of His Honour Judge F. L. Smiley, of Ottawa, chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other Board members, Messrs. W. Sanford Evans, of Winnipeg, and Howard S. Ross, K.C., of Montreal, nominated by the company and the employees respectively. The report of the Board is unanimous, with a short rider by Mr. Ross.

The dispute related to the request of the employees, 10,000 in number, for restoration of basic rates of pay, involving discontinuance of the existing wage deduction of 10 per cent. Upon receipt of the findings of the Board (the text of which is given below), the parties promptly conferred respecting the Board's recommendations, and on April 14 an agreement was reached, in accordance with the spirit of the Board's report, providing for the full abolition of the 10 per cent wage deduction by progressive steps within a twelve-month period, the deduction, which had been 10 per cent, to become 8 per cent effective April 1, 1937, 7 per cent on June 1, 6 per cent on August 1, 5 per cent on October 1, 4 per cent on December 1 and 1 per cent on February 1, 1938, with basic rates restored from April 1, 1938.

Following this settlement an understanding was reached extending the terms of the agreement to other classes of employees of the Canadian National Railways, members of the Canadian Brotherhood of Railway Employees, as follows: approximately 1,000 road employees

of the sleeping and dining car services, 900 wharf employees at Halifax, and 60 employees in the Borden-Cape Tormentine Car Ferry Service. A similar agreement was also reached between the Canadian National Express and the General Committee of the Canadian Brotherhood of Railway Employees representing approximately 2,000 express employees.

Report of Board

In the matter of the Industrial Disputes Investigation Act and in the matter of a dispute between the Canadian National Railways, (Employer), and its clerks and other classes of employees being members of the Canadian Brotherhood of Railway Employees, (Employee).

To the Honourable The Minister of Labour,
Ottawa, Canada.

The Board of Conciliation and Investigation appointed by you in the above matter now begs to report that it met for organization on January 28, 1937, and its hearings commenced at Ottawa on February 1, and continued from time to time until both parties to the dispute had had full opportunity to present evidence and arguments. In efforts to conciliate the dispute, conferences between the parties, and between the Chairman and the parties separately, were then arranged, and supplemental presentations in writing from both parties were permitted. Agreement between the parties was not, however, reached. The Board, therefore, has carefully considered the facts and conditions laid before it and begs to report its conclusions and recommendations.

The Board was composed of His Honour Judge F. L. Smiley, Ottawa, Chairman, Mr. Howard S. Ross, K.C., Montreal, nominee of the Employees, and Mr. W. Sanford Evans, Winnipeg, nominee of the Railway.

The case for the employees was presented by Mr. J. E. McGuire, Montreal, System Chairman of the Canadian Brotherhood of Railway Employees, Canadian National Railways, in a comprehensive Brief of eighty pages. He was assisted by Mr. T. McGregor and Mr. W. C. Smith, General Chairmen of the Brotherhood on the Western and Atlantic Regions, respectively, of the Railways. Present also during the public sittings of the Board, as advisers to the Employees System Committee, were A. R. Mosher, President of the Canadian Brotherhood of Railway Employees, M. M. Maclean, Earl M. Young and F. J. Ainsborough. The Railway was ably represented by Mr. A. J. Hills, Chief of Personnel, assisted by Mr. W. M. Armstrong, Bureau of Economics, and Mr. F. L. Lamplough, Staff Member. Mr. Harry Taber, of the Department of Labour, acted as Secretary of the Board at all public hearings. To the representatives of both parties the Board would express its appreciation of the careful work done in the preparation of their briefs and of the clear and well-worded presentations made and would congratulate both parties on the spirit of good feeling and moderation which characterized their attitude toward each other.

The Board was appointed on the application of the employees and the specific matter referred for investigation and report was the demand of the employees "for restoration of basic rates of pay which involves the discontinuance of a deduction of 10 per cent at present in effect."

By the very terms of the demand the matter referred to the Board was presented as being related to certain previous wage conditions, and, according to the evidence, the present dispute is a phase of a wage issue which has passed through various stages since 1931 and in respect to which a final step is now proposed by the Employees.

It appears that what are known as the "basic rates" of pay are the rates established in an agreement between the railway and the employees, dated August 1, 1929. Some two years later, under changed economic conditions, a lowering of wages was proposed. On March 5, 1932, formal notice was given by the railway to the employees of its intention to put into effect a reduction of 10 per cent in the form of a deduction from basic rates. After negotiations, an agreement was reached on April 13, 1932, and the deduction became effective on May 1, 1932, the change, as expressed by the employees, "having been justified by the management as a 'temporary measure' by reason of the acute economic conditions then existing."

Other definite stages in the history of this wage issue, as marked by agreements, were as follows: On Janaury 24, 1934 an agreement accepting a deduction of 15 per cent, effective as from December 1, 1933, and on December 4, 1934, an agreement providing that the deduction should be reduced to 12 per cent, effective January 1, 1935, and to 10 per cent, effective May 1, 1935. On July 1, 1935, the employees notified the railway of their desire to change the latter rate of deduction but further definite action was not then taken by them and it was not until October 27, 1936, that application was made for the appointment of a Board.

The employees who are parties to this application, as members of the Canadian Brother-

hood of Railway Employees, include clerical employees, freight shed staffs, station and baggage room staffs and motive power and car department employees. They number approximately 9,000. Other classes of employees of the railway, with different Union affiliations, have throughout this issue acted separately.

In its formal statement in reply to the present application, the railway presents the economic or business grounds on which its course of action throughout the history of the issue has rested. It presents this issue as one common to all its employees, and not peculiar to the group represented in this case, and, indeed, as common to all employees of Canadian Railways in Canada. Rate scales in effect in 1929 with all classes of railway employees have since that time been regarded as basic rates and, with some differences in dates and temporary differences in scale during periods of adjustment, all changes in rates have been the same for all classes. General agreements on the same lines are in effect with all classes, and the various agreements made with these employees have in all cases since 1931 followed the working out of agreements with other classes and have embodied the same conditions. The railway further pointed out that all other organized bodies of railway employees, acting together in relation to the associated Canadian Railways, had on October 1, 1936, or almost four weeks prior to such action by these employees, made application for a Board on a demand identical in purpose with the demand in this case and that Board had already been appointed in this other case.

There was thus formally brought to the attention of our Board at the very beginning of its inquiry and in the documents constituting the terms of reference, the fact that action was already proceeding under another Board on a similar, if not directly related question. Developments in these other proceedings were placed before us in various ways in the subsequent hearings and conferences.

The Employees' Case

In support of their demand the employees submitted a carefully prepared and well delivered argument. Their general attitude toward wage scales was stated as follows:

"The cost of maintaining decent standards of living, of improving those standards, of securing proper rate-differentials for work of varying difficulty or increased responsibility,—these factors lead the workers to seek the highest wages obtainable."

As to the present demand, they said:

"We desire to make it clear that no demand has been made by the Employees for an increase in basic rates,—all we asked was that basic rates be restored; in other words, that the existing 10 per cent deduction be abolished."

As a basis for their argument, the employees in Section 1 of their main submission presented a brief survey of wage history leading up to the present application. In Section 2 was given a series of tabulations showing the classification of the employees represented and their distribution according to wages received. Section 3, entitled "Cost of Living Requirements," was devoted to calculations as to the cost, weekly, monthly and yearly, of a minimum subsistence standard for a family of five persons. In Section 4, a comparison was made of the incomes of the various wage groups among the employees with the standard set up in the previous section, both on the present rate of remuneration and on the basic rates themselves, and from this they argued that their group was a "low-paid" group and that all considerations must have additional weight in their case. Section 5 quoted many figures and expressions of opinion bearing on the improvement in economic conditions, and in Section 6 "the improved position of the railways" was dealt with, the comparisons instituted being between 1933 or 1935 and 1936. Section 7 was headed "Economic recovery justifies abolition of deduction," and consisted of an argument to that effect, while Section 8 contained a summary and conclusions.

With regard to railway revenues as a factor in wage problems, they stated:

"At no time have the employees admitted that any specific loss in operating revenue justified a specific percentage of deduction. Neither from the standpoint of schedule rates, therefore, nor from the standpoint of wage reductions, has the amount of gross operating revenue been considered in more than a general way."

From the facts and opinions cited with regard to economic developments since 1933, the employees argued that "it has been shown beyond any question of doubt that economic recovery is now an accomplished fact and that the railways have not only shared in this recovery but will do so in an increasing manner," and the general conclusion was that the 10 per cent deduction for this group at least should be immediately abolished.

The Railway's Case

The railway rested its position mainly on the condition of its revenues, which in 1936 were some 38 per cent smaller than in 1929, when the basic rates were established, and were almost $18,000,000 smaller than in 1931, when the 10 per cent deduction was first proposed, which had been accepted in agreement by these employees. "In the last analysis," it was claimed, "the Railway must

be governed by its ability to pay." As another general ground of argument the railway dealt with changes in the cost of living which had occurred during the period.

In its rebuttal, the railway critically examined the cost of a subsistence budget as calculated by the employees and claimed that the methods of calculation were unsound and that the result was not only without official authority but was not in accordance with practical experience. It was pointed out, moreover, that if changes in costs be taken into account, then even on the basis of this budget the position of the employees had greatly improved since 1929, for, taking the items in the budget, "$90 in 1936 would buy 114·8 units as against 100 units that $100 would have bought in 1929."

While recognizing that the more highly paid classes of railway labour were not represented in this group of employees, the railway contended that the wages of the group could not be considered relatively low when the labour situation as a whole was taken into account, for their wages were exactly the same as those of corresponding classes of workers on other railways in Canada. The wages even of the unclassified labourers within the group, it was claimed, compare favourably with those of the very large numbers of railway employees working under Maintenance of Way agreements, and, as a group, their average wages are higher than the average of all employees in industry in Canada. The railway recognized that there has been substantial improvement in general business conditions since 1933, but supported, with figures and a chart, its contention that this improvement had not yet been fully represented in railway revenues.

CONCLUSIONS AND RECOMMENDATIONS

The duty of a Board is set forth in the Industrial Disputes Investigation Act:

"24. In every case where a dispute is duly referred to a Board it shall be the duty of the Board to endeavour to bring about a settlement of the dispute, and to this end the Board shall, in such manner as it thinks fit, expeditiously and carefully inquire into the dispute and all matters affecting the merits and right settlement thereof.

"2. In the course of such inquiry the Board may make all such suggestions and do all such things as it deems right and proper for inducing the parties to come to a fair and amicable settlement of the dispute, and may adjourn the proceedings for any period the Board thinks reasonable to allow the parties to agree upon terms of settlement."

The report of the Board in the case involving the other organized groups of railway employees was made public almost immediately after the opening of our inquiry, and, in pursuance of the duty of a Board as above defined, the Chairman suggested that both parties to the dispute before us might give consideration to this report to see if it would be of assistance toward an understanding between them. The railway asked permission of the Board to state to the employees that it was prepared to offer to them the same terms it had offered in the other case and that, without prejudice to the present case or any action that might be taken in consequence of it, the Railway would be prepared to give these employees the advantage at once of the one per cent reduction in the wage deduction which was being put into effect for the other employees in the payroll then being made up. In subsequent conference between the parties the employees declined to accept the deduction thus offered and it was reported to the Board that no agreement was reached on the terms of settlement. Conferences between the Chairman and each of the parties were held without definite result. Opportunity was then given both parties to make supplementary submissions to bring before the Board the many developments in business and other conditions bearing on the wage issue which had occurred since the main submissions of the parties were presented. These supplementary submissions were in the hands of the Board by March 29.

On that same date a settlement was made between the associated railways and the other employees, and the railway then advised the Chairman it was prepared to make these employees a new offer. A conference was arranged between the parties on April 3, and the Board was advised that the railway had offered to make an agreement on the same terms from that date as in the agreement in the other case, but that this offer had not been accepted by the employees. The railway advised the Board that "this offer having been refused may be regarded as now withdrawn, at least until the Board reports."

Under these conditions the Board re-convened on April 6. Among the considerations which, it is understood, influenced the employees in declining this last offer was the fact that it dealt with wage conditions only from April 1 to the final cancellation of the deduction. The question was raised as to provision for the one per cent deduction the other employees had been receiving since February 1 last, and which these employees had not thought it advisable to accept when offered by the railway. On this matter the Board will make a suggestion.

Subject to this point, the Board has carefully examined the terms of settlement effected in the other case. Into those terms considerations other than strictly economic factors

may have entered and these a Board would not be in a position accurately to appraise. From the material before us and in the light of the whole history of this issue, we are of the opinion that the substantial reductions in wage deduction contained in that settlement, with the definite provision for the complete restoration of the basic rates, should be agreed upon by both parties as a basis of settlement in this dispute.

We therefore recommend, according to the merits and substantial justice of the case, that the railway renew the offer made on April 3, and temporarily suspended pending a report of the Board, and that the employees accept that offer as a basis of settlement. That offer was in the following terms:

"Effective from April 1, 1937, where by agreement of December 4, 1934, ten per cent has been deducted, 8 per cent shall be deducted from employees' pay cheques, calculated on existing basic rates of pay, and that

effective June 1, 1937,	such	percentage	deduction	shall be reduced to 7 per cent
" Aug. 1, 1937,		"	"	" 6 "
" Oct. 1, 1937,		"	"	" 5 "
" Dec. 1, 1937,		"	"	" 4 "
" Feb. 1, 1938,		"	"	" 2 "
" Apr. 1, 1938,	Basic	rates shall	apply."	

With regard to the reduction of one per cent in the wage deduction which has been in effect for other classes of railway employees between February 1 and March 31, we are given to understand that legal doubts have been raised as to the validity under the Industrial Disputes Investigation Act of retroactive measures, and that it has been the policy since 1931, recognized in principle in certain outstanding agreements, that retroactive effect shall not be given to wage changes.

We, however, feel that the employees before us should be put in a position of full equality with other employees in the settlement of the present dispute. That this should be done is in the spirit of the offer of the railway last February and is in the spirit of the whole relationship between the railway and its employees. We, therefore, suggest and recommend that, while the terms of the offer of April 3, quoted above, are accepted as a basis of settlement, special supplementary payments be made to give to these employees the equivalent of what other employees have already received since February 1, and that full equality in the position should be established not later than June 1, next.

Mr. Ross desires to make an additional recommendation, as set out in the supplementary note hereto.

Respectfully submitted,

F. L. SMILEY,
Chairman.

HOWARD S. ROSS,
W. SANFORD EVANS.

Dated at Ottawa, April 12, 1937.

The representative of the employees on this Board recommends that all employees receiving $85 per month or less, be given the Basic Rate forthwith and claims that in view of the increased and steadily increasing cost of living there is more justification for such a recommendation than there was in 1933 when a majority of the Board (composed of Mr. Justice Louis Cousineau, Chairman, Mr. F. Curzon Dobell of Montreal, representing the Railways, and the Reverend Russell McGillivray of Ottawa, representing the employees) after extensive hearings, recommended: "That as to all employees then receiving $85 or less, no further deductions of any sort be permitted."

HOWARD S. ROSS.

Wage Scale Order of New Brunswick Forest Operations Commission

The New Brunswick Royal Gazette of April 21, 1937, contains wage scale Order No. 9 of the New Brunswick Forest Operations Commission. This order, which came into effect on May 1, contains the following wage provisions.

"For cutting, peeling, yarding and hauling the average rate of wages paid by any employer to his employees shall not be less than forty dollars ($40) per month and board net provided however, that no employee shall receive less than thirty-four dollars ($34) per month and board net. When board is not furnished by the employer, the employee shall receive fifty cents (50 cents) per day additional.

"Wages paid to cooks, tractor operators and truck drivers shall not be included in determining the average rate. The amounts paid to employees for piece work shall not be included in determining the above average wage.

"The average amount paid per month by any employer to his employee for piece work shall not be less than the average of forty dollars ($40) per month and board net, but in no case shall any employee on piece work receive less than thirty-four dollars ($34) per month and board net.

"Foremen, book-keepers and clerks do not come within the jurisdiction of the Act and their wages shall not be included in determining any average rate."

STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1937

The following table shows the number of disputes, workers involved, and time loss for April, 1937, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in man working days
*Apr. 1937	38	13,097	148,677
*Mar. 1937	21	5,382	37,088
Apr. 1936	17	1,909	14,424

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes".

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The substantial increase in the number of disputes was due to the occurrence of a number of strikes involving relatively small numbers of employees, and the increase in the number of workers involved and in the time loss was due chiefly to two strikes, each involving nearly five thousand employees for about two weeks, namely those of automobile factory workers at Oshawa, Ont., and dressmakers at Montreal, P.Q. Strikes of longshoremen at Toronto, Hamilton, and Point Edward, Ont., also caused considerable time loss. In March, strikes of furniture factory workers in Ontario west of Toronto and of cotton factory workers at Sherbrooke, P.Q., caused considerable time loss. In April, 1936, strikes of loggers in Vancouver Island, B.C., shoe factory workers at London, Ont., and of dress cutters in Montreal, P.Q., each caused time loss of from three thousand to four thousand man working days.

Seven disputes, involving 1,427 workers, were carried over from March and thirty-one disputes commenced during April. Of these thirty-eight disputes, twenty-one terminated during the month, four resulting in favour of the employers affected, seven in favour of the workers involved, while compromise settlements were reached in ten cases. At the end of April, therefore, there were on record seventeen disputes recorded as strikes or lockouts, namely: meat packing workers, Vancouver, B.C., fur factory workers, Winnipeg, Man., coal miners, River Hebert, N.S., coal miners, New Waterford, N.S., shoe factory workers, Perth, Ont., women's clothing factory workers, Montreal, P.Q., knitting factory workers, Toronto, Ont., furniture factory workers, Hanover, Ont., two strikes of commercial artists, Toronto, Ont., moulders, Guelph, Ont., fire brick and tile workers, New Glasgow, N.S., longshoremen, Toronto, Ont., longshoremen, Hamilton, Ont., longshoremen, Point Edward (Sarnia), Ont., bottle washers, Toronto, Ont., and restaurant employees, Vancouver, B.C.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to seven such disputes, namely: motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; glass factory workers at Hamilton and Wallaceburg, Ont., and Redcliff, Alta., August 19, 1936, one employer; restaurant workers, Toronto, Ont., February 1, 1937, one employer; longshoremen, Vancouver, B.C., Nov. 23, 1936, several employers; beverage dispensers, Toronto, Ont., March 4, 1937, one employer; meat packing workers, Edmonton, Alta., April 3, 1937; three employers; and laundry employees, Edmonton, Alta., April 8, 1937, two employers, the last four being added to the list this month.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence or allowances for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

A dispute involving sixteen employees in one bakery establishment at Vancouver, B.C., for part of one day, March 8, 1937, was reported too late for inclusion in the April issue of the LABOUR GAZETTE. The Bakery and Confectionery Workers' International Union of America, on March 5, had presented an agreement providing for increases in wages and when told that a reply would be given in two weeks, the employees ceased work. The union agreement being signed, work was resumed. The agreement is outlined elsewhere in this issue.

A strike of garbage collectors at Peterborough, Ont., on March 27, was reported in the press. It is reported to the Department that three employees of a farmer who has

the contract to collect garbage were dismissed for not performing their duties and that the collection of garbage was not affected.

A dispute involving longshoremen at Montreal resulted in a brief disturbance on April 29, members of two organizations claiming the work. One man was injured and sent to the hospital and several men were slightly injured. The Shipping Federation of Canada had signed an agreement for the 1936 season with a new union, the National Independent Union of Longshoremen (Island of Montreal), Incorporated (Labour Gazette, April, 1936, p. 369). The Federation had refused to enter into an agreement with the Association of Syndicated Longshoremen of the Island of Montreal, with which it had agreements from 1916 to 1935, owing to disputes during 1935. The latter union during 1936 secured a charter as Local 373 of the International Longshoremen's Association which had agreements at Saint John, N.B., and Halifax, N.S., but the agreement at Montreal with the independent union was continued in effect for 1937. At the opening of navigation the international union stated that its members in United States ports would not work for shipping companies refusing to hire members of its local at Montreal. During April the independent union entered into negotiations for a charter as Local 375 of the International Longshoremen's Association and apparently it was understood by some that members of both unions would be employed. When members of Local 373 came to the docks for work and were not employed the clash occurred. It was arranged that the Shipping Federation would recognize Local 375 to be the successor of the National Independent Union as a party to the agreement, and that its members only would continue to be employed. It is understood that members of Local 373 will be admitted as members to Local 375 so far as employment is available, the union being disbanded.

A minor dispute involving fifty to sixty employees at Simcoe, Ont., for one hour on April 16 in one establishment manufacturing gloves and mitts has been reported, the employees securing a ten per cent increase in wages.

A minor dispute involved twenty-one employees on the night shift of a chemical fertilizer plant at Port Hope, Ont., for two hours on April 17. The workers demanded an increase in wages from 25 cents-30 cents per hours to 40 cents, and remained in the plant while negotiations were carried on. The management agreed to an increase of 35 cents per hour and work was resumed.

A minor dispute involved fourteen employees in one fur shop at Toronto, Ont., on April 26, when the employer failed to discharge one worker expelled from the union for non-payment of dues, there being a closed shop agreement with the International Fur Workers' Union. Work was resumed the next day, this demand having been complied with.

A dispute involving employees in a wood manufacturing establishment at Magog, P.Q., on April 16 has been reported. It appears that a number of boys employed at 15 cents per hour demanded an increase in wages, apparently at a change of shifts, and a strike of all employees was threatened. Negotiations participated in by the member of the provincial legislature, the Mayor and the parish priest resulted in increases of 15 per cent for boys and ten per cent for employees at 25 cents per hour.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

Meat Packing Workers, Vancouver, B.C.—The report of the Commissioner appointed by the provincial government under the Inquiries Act to investigate this dispute was released on April 15 and recommended the reinstatement of most of the employees involved. The employer had not agreed to accept the Commissioner's recommendations by the end of the month and no settlement had been reached.

Tobacco Workers, Kingsville, Ont.—Following the refusal of the strikers to accept the settlement negotiated between the committee and the management with the assistance of an officer of the Ontario Department of Labour near the end of March (as all the strikers were not to be taken back) most of the strikers returned to work on April 6 at the increased wages agreed upon.

Rubber Factory Workers, Kitchener, Ont.—As stated in the April issue of the Labour Gazette this dispute involving employees in one establishment was terminated on April 3 as a result of negotiations between the management and local union representatives, a compromise on the wage increases being reached.

Fur Factory Workers, Winnipeg, Man.—Early in April the Commissioner appointed under the Manitoba Evidence Act to investigate the dispute heard argument by counsel for the fur workers' union and for the employers. The suit for damages entered by one of the employers against the union was dealt with in court and also the appeal of strikers convicted of assault, judgment being reserved. Two men charged with assault in connection with serving court orders on pickets were acquitted. The seven employers against whom over one hundred workers were still on strike

reported that agreements had been reached with a new and independent union, the Manitoba Fur Employees' Association. The union had made agreements with twenty-six other employers by the end of 1936.

WOOLLEN TEXTILE FACTORY WORKERS, ST. JOHN'S, P.Q.—As a result of conciliation by an official of the provincial Department of Labour, a settlement of this dispute was reached providing that the wages of male employees should be fixed by the provincial authorities, that the union employees should elect delegates to represent them but that any employee might deal with the officials personally. All employees were to be taken back within two weeks and work was resumed on April 13.

LONGSHOREMEN (COASTWISE), VANCOUVER, B.C.—The Shipping Federation of British Columbia having signed an agreement with the Burrard Coastwise Longshoremen's Association to be effective from March 13, 1937, to March 12, 1938, and from year to year thereafter, subject to notice, with a wage scale five cents per hour higher than before, effective from April 1, 1937, it appears that employment conditions are no longer affected by the strike of the International Longshoremen's Association for union recognition in progress since November 23, 1936. As the union has not called off the strike it is included in the list of such disputes in a previous paragraph.

BEVERAGE DISPENSERS, TORONTO, ONT.—This strike, which commenced on March 4, involving eight out of eighteen employees in one hotel, appears to have lapsed by the end of April, two of the strikers having returned to work and the remainder having secured part time employment as spare men in other establishments. As the union has not called off the strike, it is included in the list of such disputes in a previous paragraph.

COAL MINERS, RIVER HEBERT, N.S.—This dispute, commencing on April 8, was due to a proposal of the employer that the minimum rate for contract miners, to which earnings would be made up, should be abolished as part of the mine was worked out and new development work was necessary. The miners voted against this and the mine was closed on April 8. One hundred and fifty of the miners had been laid off in recent months. Negotiations for a settlement were carried on but at the end of April the mine had not been reopened.

COAL MINERS, NEW WATERFORD, N.S.—Bankhead employees in one colliery demanded contract rates instead of day rates claiming that the quantity of coal handled had increased greatly. The management agreed to put the men on contract rates but refused to grant the rates demanded and the men ceased work on April 26. The management protested to the international President of the United Mine Workers of America against the violation of the agreement in effect before negotiations had been completed and through the district president they were directed to resume work and continue negotiations. They refused and were reported to be supported in this by the 1,200 employees in the mine who were indirectly affected. At the end of the month the dispute was unterminated, but on May 4 work was resumed, negotiations to be continued.

FLOUR AND CEREAL MILL WORKERS, NEW WESTMINSTER, B.C.—A number of the employees in one establishment ceased work on April 5, their demand for the reinstatement of three men dismissed as a result of agitation for a union during working hours being refused. The establishment was picketed and on the following day the employer agreed to reinstate the dismissed men and permit freedom of association.

FLOUR AND FEED MILL WORKERS, HANOVER, ONT.—Employees in one establishment ceased work on April 10 to secure recognition of a shop committee, increased wages and reduced hours. In connection with picketing five men were charged with assault and disorderly conduct on April 13 when the employer attempted to move a load of salt, the driver being pulled from the truck and the superintendent injured. The charges were dismissed by the magistrate on April 23, no evidence being presented. The strike had been settled on April 17, the terms not being revealed.

MEAT PACKING WORKERS, EDMONTON, ALTA.—A number of the employees in three establishments ceased work at various dates, April 3, April 9, and April 10, respectively, demanding recognition of the Edmonton Meat Packing and Purveying Union, Local No. 1 of the Canadian Victuallers' and Caterers' Union, affiliated with the All Canadian Congress of Labour. Saturday afternoon off was also requested. In the first establishment affected the strikers remained in the plant until night on Saturday, April 3, but left over Sunday, returning and resuming work on Monday, expecting to enter into negotiations. They ceased work again in the afternoon and remained in the plant until Tuesday when the management asked them to move out. Picketing outside was then carried on until April 14 when the strikers were advised by the union to resume work. In the second plant about one-third of the employees ceased work on April 9 but operations were continued and on April 23 a committee of the strikers met the management but refused to apply for their positions individually. In the third establishment a portion

only of the employees ceased work and most of them resumed work within a few days. When the provincial legislature enacted the Freedom of Trade Association Act on April 14 the union had advised the strikers in two of the plants to apply for their positions and although many were not taken on it appears that employment conditions were no longer affected to a serious extent by April 20. As the union has not declared the strike terminated, it has been added to the list of such disputes in a previous paragraph.

Shoe Factory Workers, Perth, Ont.—A number of employees in one establishment ceased work on April 14, their demand for a closed shop agreement with a newly formed local of the Canadian Shoe Workers' Union and Allied Crafts having been refused. On April 15 the plant was closed down pending negotiations. The management stated its willingness to recognize a shop committee of union members but that many of the employees were not union members. The union also proposed an increase in wages but did not press this demand. Later it was reported the union membership had increased from 100 to 185 out of 221 employees. At the end of the month a settlement had not been reached and the plant was picketed on April 30. It was reported that negotiations were in progress and that the difficulty was due to a proposal that the union should pass on the hiring and laying off of workers although the management said there would be no discrimination. The union demand for the closed shop was dropped but an increase in wages of five cents per hour for time workers and ten per cent for piece workers was proposed.

Men's Work Clothing Factory Workers, Winnipeg, Man.—Employees in one establishment ceased work on April 2, claiming that the agreement with the United Garment Workers of America was not being complied with in certain respects. The employer stated that he understood the agreement was being carried out and negotiations resulted in an adjustment of piece rates, back pay for overtime, and employees becoming union members. Work was resumed on April 5.

Men's Work Clothing Factory Workers, Brantford, Ont.—Employees in one establishment ceased work on April 2, negotiations during some weeks for a partial restoration of wage rates, reduced at various times since 1929, not having resulted in a settlement. The employer offered ten per cent on existing rates and the union proposed ten per cent on the basic scale which had been reduced thirty-six per cent. Further negotiations resulted in a compromise on the wage scale and a closed union shop agreement with the United Garment Workers of America was signed on April 13. The agreement is outlined elsewhere in this issue. All of the employees were stated to be members of the union but there had been no signed agreement since 1933. The establishment was picketed but no trouble was reported.

Women's Clothing Factory Workers (Dressmakers), Montreal, P.Q.—Refusal of approximately one hundred employers to negotiate with the International Ladies' Garment Workers' Union led to a strike of about five thousand employees on April 15, the dress cutters whose local had an agreement participating, claiming that the agreement was violated by the refusal of the employers to negotiate with their union. The employers had made an agreement with the National Catholic Unions and applied for its approval by the Minister of Labour under the Quebec Collective Labour Agreements Extension Act. Each organization claimed a majority of the workers in the industry. On April 17 several manufacturers reached an agreement with the international union and by the end of the month this number had risen to nearly seventy, employing about one-half of the employees in the dress industry, excluding cotton dresses, etc., not involved in the strike. In the meantime the Quebec Department of Labour called a conference of the parties involved and proposed a reference to arbitration which was agreed to, the international union, however, stipulating that the union shop must be accepted, and that in each establishment the workers should vote as to which union should be recognized. During a delay owing to this, provincial authorities pressed for an early resumption of work and it was reported that certain officers of the union were to be arrested on charges of conspiracy, etc. It later appeared that the crown prosecutor had been directed to investigate charges of intimidation, disorder, etc., and lay charges if justified. At the end of the month the dispute was unterminated but work had been resumed in some seventy establishments with about 2,500 employees under tentative agreements. Early in May eighty employers had made such agreements and arbitration was finally agreed upon. Work was resumed on May 7.

Knitting Factory Workers (Silk), Toronto, Ont.—A large number of employees in one establishment ceased work on April 28, the attempts of the local of the United Textile Workers of America to negotiate an agreement having been unsuccessful. The union proposed increases in wages of twenty per cent to thirty per cent. A slight disturbance occurred next day when pickets attempted to prevent other workers from entering the factory but nothing

serious was reported. No further negotiations have been reported and at the end of the month the dispute was unterminated. Early in May the employer reported that 150 workers had returned and that he had advertised for additional employees.

FURNITURE FACTORY WORKERS, HANOVER, ONT.—Employees in one establishment ceased work on April 7 when the employer refused to negotiate with the union shop committee, regarding a foreman and the discharge of three union employees. No negotiations were carried on until May when the employeer agreed to recognize a committee of employees and work was resumed.

FURNITURE FACTORY EMPLOYEES, HANOVER, ONT.—Employees in one establishment ceased work on April 9, demanding recognition of the union committee in the application of the wage scale, effective April 13, 1937, in the code under the Ontario Industrial Standards Act agreed upon between the manufacturers and employees' representatives in settlement of the strike in furniture factories in various localities west of Toronto in March. The strikers were members of the furniture workers' local of the United Brotherhood of Carpenters and Joiners of America. Negotiations with the union committee resulted in the adjustment of the wage scale, and work was resumed on April 14.

FURNITURE FACTORY WORKERS, CHESLEY, ONT.—Employees in one establishment ceased work on April 13 demanding the reinstatement of three workers dismissed and an adjustment of wages in accordance with the code under the Industrial Standards Act. The employer stated that the three men were unable to earn the rates specified and owing to slack season were not required. As a result of mediation by the town council, it was agreed that one would be reinstated, another taken back when needed but the third would not be employed owing to advanced age. It was reported that the application of the wage scale would be dealt with by the Advisory Board under the code. Work was resumed on April 19. Some of the pickets attempted to prevent the movement of a carload of furniture but on being warned of trespassing on railway tracks, they desisted.

FURNITURE FACTORY WORKERS, KITCHENER, ONT.—Employees in one establishment ceased work on April 9, not having received an answer to a letter from the United Brotherhood of Carpenters and Joiners of America *re* the application of the wage scale in the code under the Ontario Industrial Standards Act effective April 13. Negotiations with the management resulted in a settlement as to the application of the code, which increased wages by ten per cent and reduced hours from fifty and over to forty-seven per week. Work was resumed on Monday, April 13.

COMMERCIAL ARTISTS, TORONTO, ONT.—Employees in five engraving and commercial art establishments ceased work on April 20, demanding agreements with the Artists' Union chartered by the Trades and Labour Congress of Canada during the past year, providing for minimum wages of $40 per week, the forty-hour week, regulation of apprenticeship, etc. Prior to the strike the Ontario Department of Labour called a conference of the employers and union representatives but an agreement was not reached. The employers stated that most of the employees were paid between $40 and $85 for a forty-four hour week, and in a number of establishments were not organized and the closed union shop would be unsatisfactory. On April 28 another conference failed to reach a settlement and the strike was unterminated at the end of the month.

In one other establishment in Toronto a sympathetic strike of twenty-five commercial artists commenced on April 29.

METAL FACTORY WORKERS, COBOURG, ONT.—Employees in one establishment, manufacturing metal furniture and small firearms, ceased work on the afternoon of April 1 demanding minimum wages of $15 per week and reduction in hours from 55 hours and up to 44 hours. The management agreed to the minimum of $15 for experienced employees and to a 50-hour week, and work was resumed next day.

AUTOMOBILE FACTORY WORKERS, OSHAWA, ONT.—Employees in one establishment ceased work on April 8, negotiations between representatives of a newly formed local of the United Automobile Workers of America and the management for an agreement having broken down over recognition of the international union. The Ontario Minister of Labour early in April had brought about a resumption of negotiations between the management and the local union officers but the union insisted on the application of the agreement for the United States plants of the company to those in Canada, which was refused. The establishment was picketed but on being warned by the Mayor of Oshawa, there was no interference with persons entering or leaving the plant and parts were shipped out. A conference in the office of the Premier of Ontario on April 11 came to an end when the Union officials telephoned the international union president, the Premier objecting to recognition of these international union repre-

sentatives on account of their affiliation with the Committee for Industrial Organization (Labour Gazette, December, 1935, p. 1088) owing to "sit-down strikes" and other tactics of their organizations in the United States.

Through the Premier of Ontario and the Mayor of Oshawa the company offered wage increases of 7 cents per hour for those paid 55 cents per hour or less and 5 cents per hour to others, and the acceptance of the shop steward system in addition to concessions already made, but this was refused. Finally on April 21 at a conference in the Premier's office a settlement was reached which was approved by a vote of union members and work was resumed on April 25. The agreement for the settlement is between the company and its employees and provides for the wage increases above mentioned, negotiations as to minimum rates to be carried on, the recognition of a shop committee representing union employees, a reduction in hours from 50 per week to forty-four, consisting of 4 days at 9 hours and one at 8 hours, time and one-half for overtime, modification of the production basis or efficiency system (to eliminate "speed up"), recognition of seniority in lay-off and re-hiring, pay day every other Friday, five-minute rest periods morning and afternoon, an alternative for the slot vending machines for chocolate bars, etc., requested by the union, no discrimination by either management or union regarding union membership. The agreement is to "continue in force until and as long as and concurrent with the agreement between General Motors Corporation in the United States, dated February 11, and the United Automobile Workers of America." Under the terms of this and a supplementary agreement it expires on two months' notice, not to be given before June 11, 1937.

A plant of the company at Windsor, Ont., with 500 employees was closed during the strike but the plant of a subsidiary company at St. Catharines, Ont., continued in operation and these were covered by agreements entered into later in the month.

Moulders, Guelph, Ont.—The moulders in one department of an establishment manufacturing radiators and hardware goods ceased work on April 20 when their demand for a fifteen per cent increase in wages and a reduction in hours to nine per day from ten per day and up was refused, the employer offering an increase for the hourly paid moulders but not for the piece workers or helpers. The strikers were members of the International Moulders Union but the establishment had always been open shop and the closed shop was not demanded. The establishment was picketed and the union claimed that the radiator moulders had joined in the strike bringing the number up to about 100, but the management stated that the radiator department was closed because some of the men were kept from work by pickets. On April 27 the pickets prevented movement of a freight car until the Crown Attorney arranged that the management would meet with union representatives. Work was resumed on May 4 pending negotiations.

Fire Brick and Tile Workers, New Glasgow, N.S.—Employees in one establishment, producing tile, furnace linings, etc., members of the Amalgamated Association of Iron, Steel and Tin Workers, proposed an increase in wages of ten cents per hour, the rates paid being from 25 cents to 56½ cents per hour, nine hours per day and 50 hours per week, also time and one-half for overtime. The management offered a ten per cent increase and when not accepted posted a notice that the plant would be closed indefinitely at the end of the day. The employees then walked out. The union reported that they were willing to accept the increase pending further negotiations, but were not given an opportunity to give an answer. At the end of the month a settlement had not been reported.

Structural Steel Workers, Hamilton, Ont.—Employees engaged on a contract for a new steel plant ceased work at noon on April 12, their demand for an increase in wages from 60 cents per hour to 80 cents being met by an offer of 70 cents. As a result of negotiations this was accepted on April 13 and work was resumed on April 16.

Longshoremen, Toronto, Ont.—The shipping companies and the Toronto Longshoremen's Union not having agreed upon the wage scale for the season when navigation opened about April 15, a strike was declared. The men asked for an increase in wages from 42 cents per hour for day work to 50 cents and from 45 cents for night work, Sundays and holidays, to 55 cents. The employers offered 44 cents and 47 cents respectively. The employers succeeded in handling boats with new employees but it was stated that the work was not done as quickly as is usual. Toward the end of the month the union secured a charter from the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, the members of which have an agreement for stevedoring at Port Arthur and Fort William. Toward the end of April this union applied for mediation by the Federal Department of Labour and as a result negotiations between the union and the shipping companies were begun early in May.

LONGSHOREMEN, HAMILTON, ONT.—The longshoremen at Hamilton were organized as Local No. 2 of the Toronto Longshoremen's Union and a strike was declared at the same time as that in Toronto for the same wage demands. The Hamilton local also secured a charter from the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

LONGSHOREMEN, POINT EDWARD, ONT.—The employees had ceased work on Nov. 30, 1936, a few days before the close of navigation and on the opening of navigation in April again made demands for increased wages, that is from 35 cents per hour to 50 cents for day work and 55 cents for night work, holidays and Sundays. The employers offered 40 cents per hour with 43 cents for holidays, etc. The longshoremen refused to work and other employees were engaged. The docks were picketed and some delays in handling vessels occurred when the workers did not go through the picket lines. On April 21 the Reeve and Council had a conference with the parties to the dispute but a settlement was not reached. The longshoremen had a charter from the International Longshoremen's Association but affiliated with the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, etc., and the dispute with those at Toronto and Hamilton was taken up with the shipping companies early in May.

DELIVERY BOYS, EDMONTON, ALTA.—Boys delivering parcels on bicycles ceased work on April 7, demanding an increase in their share of the proceeds. Work was resumed two days later when through a representative of the Trades and Labour Council it was arranged that an increase would be made.

STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1937*

Industry, occupation and locality	Number of workers involved	Time loss in man working days	Remarks
(a) Strikes and Lockouts in progress prior to April, 1937			
MANUFACTURING—			
Animal Foods—			
Meat packing workers, Vancouver, B.C.	202	4,000	Commenced Dec. 29, 1936; against discharge of employees, claimed to be for union activity; unterminated.
Tobacco and Liquors—			
Tobacco workers, Kingsville, Ont.	156	780	Commenced Mar. 18, 1937; for adjustment of piece rates; terminated April 6, 1937; in favour of workers.
Rubber Products—			
Rubber factory workers, Kitchener, Ont.	550	2,000	Commenced Mar. 24, 1937; for increased wages, reduced hours, and recognition of union; terminated April 6, 1937; compromise.
Fur, Leather, etc.—			
Fur factory workers, Winnipeg, Man.	100	2,000	Commenced Aug. 11, 1936; for union agreement, increased wages and forty hour week; unterminated.
Textiles, Clothing, etc.—			
Woollen textile factory workers (weavers and dyers), St. Johns, P.Q.	211	2,000	Commenced Mar. 16, 1937; for increased wages, reduced hours and union recognition; terminated April 13, 1937; compromise.
TRANSPORTATION—			
Water—			
Longshoremen (coastwise), Vancouver, B.C.	200	500	Commenced Nov. 23, 1936; for recognition of union; employment conditions no longer affected by April 3, 1937; in favour of employer.
SERVICE—			
Business, etc.—			
Beverage dispensers, Toronto, Ont.	8	100	Commenced Mar. 4, 1937; for union agreement with increased wages; employment conditions no longer affected by end of April; in favour of employer.

STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1937*—*Continued*

Industry, occupation and locality	Number of workers involved	Time loss in man working days	Remarks
(b) Strikes and Lockouts commencing during April, 1937			
MINING, ETC.—			
Coal miners, River Hebert, N.S.	200	4,000	Alleged lockout; commenced April 8, 1937; reduction in wages and for change in working conditions; unterminated.
Coal miners, New Waterford, N.S.	34	100	Commenced April 26, 1937; for piece rates and wage increases; unterminated.
MANUFACTURING—			
Vegetable Foods—			
Flour and cereal mill workers, New Westminster, B.C.	21	28	Commenced April 5, 1937; against discharge of workers and for union activity; terminated April 6, 1937, in favour of workers.
Flour and feed mill workers, Hanover, Ont.	10	70	Commenced April 10, 1937; for recognition of shop committee, increased wages and reduced hours; terminated April 17, 1937; compromise.
Animal Foods—			
Meat packing workers, Edmonton, Alta.	150	2,000	Commenced April 3, 1937; for union recognition; employment conditions no longer affected by April 19; in favour of employer.
Boots and Shoes—			
Shoe factory workers, Perth, Ont.	185	2,500	Commenced April 14, 1937; for increased wages and closed union shop agreement; unterminated.
Textiles, Clothing, etc.—			
Men's work clothing factory workers, Winnipeg, Man.	50	75	Commenced April 2, 1937; to enforce union agreement, wages, overtime and closed shop; terminated April 5, 1937; in favour of workers.
Men's work clothing factory workers, Brantford, Ont.	56	460	Commenced April 2, 1937; for increased wages and union agreement; terminated April 13, 1937; compromise.
Women's clothing factory workers (dressmakers), Montreal, P.Q.	5,000	50,000	Commenced April 15, 1937; for union agreement with increased wages and reduced hours; unterminated.
Knitting factory workers (silk), Toronto, Ont.	300	900	Commenced April 28, 1937; for union agreement with increased wages; unterminated.
Other Wood Products—			
Furniture factory workers, Hanover, Ont.	73	1,500	Commenced April 7, 1937; against discharge of workers, alleged to be for union activity and for recognition of shop committee; unterminated.
Furniture factory workers, Hanover, Ont.	105	420	Commenced April 9, 1937; for union recognition; terminated April 13, 1937; in favour of workers.
Furniture factory workers, Chesley, Ont.	35	175	Commenced April 13, 1937; against discharge of workers and for increased wages; terminated April 17, 1937; compromise.
Furniture factory workers, Kitchener, Ont.	53	106	Commenced April 9, 1937; for increased wages and reduced hours; terminated April 10, 1937; in favour of workers.
Printing and Publishing—			
Commercial artists, Toronto, Ont.	85	850	Commenced April 20, 1937; for union agreement with increased wages and reduced hours; unterminated.
Commercial artists, Toronto, Ont.	25	50	Commenced April 29, 1937; sympathy with strike of artists commencing April 20, 1937; unterminated.

STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1937*—*Concluded*

Industry, occupation and locality	Number of workers involved	Time loss in man working days	Remarks
(b) Strikes and Lockouts commencing during April, 1937—*Concluded*			
Metal Products—			
Metal furniture and small-arms factory workers, Cobourg, Ont.	63	16	Commenced April 1, 1937; for increase in wages and reduction in hours; terminated April 1, 1937; compromise.
Automobile factory workers, Oshawa, Ont.	4,200	63,000	Commenced April 8, 1937; for union agreement; terminated April 24, 1937; compromise.
Moulders, etc., Guelph, Ont.	47	470	Commenced April 20, 1937; for increased wages and reduced hours; unterminated.
Non-Metallic Minerals—			
Fire brick and tile workers, New Glasgow, N.S.	92	500	Alleged lockout; commenced April 24, 1937; *re* increased wages; unterminated.
CONSTRUCTION—			
Buildings and Structures—			
Structural steel workers, Hamilton, Ont.	13	30	Commenced April 12, 1937; for increased wages; terminated April 15, 1937; compromise.
TRANSPORTATION—			
Water—			
Longshoremen, Toronto, Ont.	350	5,000	Commenced April 15, 1937; for increased wages; unterminated.
Longshoremen, Hamilton, Ont.	214	3,000	Commenced April 15, 1937; for union recognition, increased wages and improved conditions; unterminated.
Longshoremen, Point Edward (Sarnia), Ont.	150	1,000	Commenced April 16, 1937; for increased wages; unterminated.
TRADE—			
Delivery boys, Edmonton, Alta.	8	12	Commenced April 7, 1937; for increased wages; terminated April 8, 1937; compromise.
Milk wagon drivers, Toronto, Ont.	26	104	Commenced April 14, 1937; for union agreement; terminated April 18, 1937; in favour of workers.
Bottle washers, Toronto, Ont.	5	40	Commenced April 21, 1937; for increased wages and reduced hours; unterminated.
SERVICE—			
Public Administration—			
Municipal quarry workers, Beamsville, Ont.	12	48	Commenced April 21, 1937; for increased wages; terminated April 24, 1937; compromise.
Recreational—			
Pin boys (bowling alley), Winnipeg, Man.	9	18	Commenced April 3, 1937; against discharge of worker; terminated April 5, 1937; in favour of workers.
Business—			
Laundry employees, Edmonton, Alta.	95	800	Commenced April 8, 1937; for union agreement with increased wages and reduced hours; employment conditions no longer affected by end of April; in favour of employer.
Restaurant employees, Vancouver, B.C.	4	25	Commenced April 22, 1937; against discharge of union worker; unterminated.

*In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

DAIRY DRIVERS, TORONTO, ONT.—A number of the drivers of one dairy company ceased work on April 14 and their representatives demanded an agreement with the Milk Drivers and Dairy Employees local of the International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers. Work was resumed on April 18, the union reporting that an agreement had been signed with a more desirable system of wage payment. The agreement is outlined elsewhere in this issue.

Bottle Washers, Toronto, Ont.—Employees working at the washing of bottles for a dealer in old bottles ceased work on April 21, owing to the refusal of the demand of the International Hod Carriers, Building and Common Labourers' Union for an increase in wages from 10 cents per hour to 30 cents with a reduction in hours from fourteen per day to eight and nine, with time and one-half rates for overtime. It was alleged that union workers had been discriminated against. The establishment was picketed. At the end of the month a settlement had not been effected.

Quarry Workers (Township), Beamsville, Ont.—Employees in the township quarry for road work went on strike on April 21 demanding an increase in wages from 20 cents per hour to 30 cents, but resumed work on April 26 when the rate was raised to 25 cents.

Pin Boys (Bowling Alley), Winnipeg, Man.—The boys in one establishment ceased work on April 3 when one was discharged for alleged faulty work. The establishment was picketed but work was resumed after two days when the boy was reinstated after an explanation. It was also reported that the boys secured an increase in pay and a change in procedure as to their supervision.

Laundry Workers, Edmonton, Alta.—Employees in two laundry and dry cleaning establishments ceased work on April 8, the management not having agreed to the proposal of a local of the National Cleaners and Dyers and General Workers' Union, affiliated with the All Canadian Congress of Labour, for union recognition, increased wages, the forty-four hour week and improved working conditions, especially "speed-up." On April 17 the employers stated that the establishments were operating at full capacity. At the end of the month the strike had not been called off and is, therefore, included in the list of such disputes in a previous paragraph.

Restaurant Employees, Vancouver, B.C.—A number of employees in one establishment, three out of twenty-seven, ceased work on April 22 when one worker was dismissed, apparently for union membership or activity. It is reported that one of these returned on the next day. The Hotel and Restaurant Employees' Union picketed the restaurant. An application by the employer for an injunction against picketing was refused on April 30, the case being set down for trial.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

The latest available information as to strikes and lockouts in various countries is given in the Labour Gazette from month to month, bringing down to date that given in the March issue, in the review of Strikes and Lockouts In Canada and Other Countries, 1936. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

Great Britain

The number of disputes beginning in March was 53 and 20 were still in progress from the previous month, making a total of 73 in progress during the month, involving 32,700 workers with a time loss of 218,000 working days for the month.

Of the 53 disputes beginning in March, 14 were over demands for increases in wages and 13 on other wage questions; 15 were over questions respecting the employment of particular classes or persons, 6 on other questions respecting working arrangements and 4 over questions of trade union principle; one dispute was due to sympathetic action.

Final settlement was reached in 47 disputes during March, of which 8 were settled in favour of the workers, 21 in favour of employers and 18 resulted in compromises. In 12 other disputes work was resumed pending negotiations.

About 12,500 apprentices in shipbuilding and engineering plants at Glasgow were on strike during the greater part of April, demanding a uniform scale of wages. On April 16, about 120,000 journeymen struck for one day in sympathy with the apprentices. The latter voted to return to work on May 3, the employers having agreed to negotiate.

On April 15 about 800 bus drivers in the county of Kent went on strike demanding a 7½ hour working day. By the end of the month the strike had spread to about nine other counties in southern England, involving about 12,000 drivers. On May 1, about 125,000 bus drivers in London and its suburbs struck

demanding a 7½ hour working day and a revision of running schedules which they alleged imposed a severe nervous strain on the drivers in the crowded and narrow streets. Negotiations were still in progress on May 10.

Irish Free State

The number of disputes beginning in 1936 was 107, involving 9,443 workers in 192 establishments. There were 7 disputes involving 905 workers and 27 establishments continued from 1935. The total time loss in all disputes in progress during the year was 185,623 man working days. Of the 107 disputes beginning in the year, 36 were over wage questions, 34 over the engagement and dismissal of workers, 4 over hours of labour, 22 over other questions of working conditions and 9 over trade union questions; there were 2 sympathetic strikes. The industrial groups most seriously affected, from the point of view of time loss, were, transport other than train and omnibus (dock labour, etc.), food, drink and tobacco, building and allied trades and furniture and wood working. Of the 109 disputes terminated during the year, the workers' claims were wholly admitted in 39, admitted in part in 37 and rejected in 22; employers claims were wholly successful in one dispute and rejected in two; in 8 other disputes the result was indeterminate. Settlements of 74 disputes were reached as a result of direct negotiations, 24 following voluntary conciliation, 3 as a result of voluntary arbitration and 8 ended without successful negotiation.

United States

The number of disputes beginning in January, 1937, was 160, and 100 were still in progress from the previous month, making a total of 260 in progress during the month, involving 210,000 workers with a time loss of 2,700,000 working days for the month.

Preliminary figures indicate that about 230 new strikes began in February, 1937, in which about 100,000 workers were involved. Another 125,000 workers were involved in 110 strikes which continued into February from the preceding month, making a total of 225,000 workers involved in the 340 strikes in progress during the month.

The labour unrest in the automobile industry accompanying the organization of the workers in the United Automobile Workers of America was less acute in April than in recent months. The Labour Gazette for April, 1937, page 413, reported settlements reached in two important companies early in the month.

On April 2, about 2,000 men in a Ford Motor Company plant at Kansas City, Missouri, struck, claiming that union officials and members had been discriminated against when a layoff occurred in the plant. A number of strikers remained in the plant but left the factory on the arrival of company officials who were sent to negotiate with the workers. A settlement in which the company agreed to take back all employees, including those laid off, not to discriminate against union men in future layoffs and to investigate wages was reached on April 4. The union agreed not to coerce workers to join their group. A similar settlement was reached at a Ford assembly plant in Richmond, California, where about one thousand workers were on strike for two days late in the month.

On March 24, about 5,000 members of the United Shoe Workers of America, a new union, ceased work in Lewiston and Auburn, Maine. The workers demanded recognition of the union. This strike continued during April and on April 21, troops were used to maintain order. Negotiations were continuing at the end of the month.

On April 2, the entire bituminous coal industry of the United States which employs in the neighbourhood of 450,000 men was closed down. Negotiations between operators and employees regarding demands by the latter for increased wages and time and one half for overtime had been going on since February 17. Practically all the workers' demands except those regarding overtime had been met when the workers struck. An agreement was reached on the day of the strike and work was resumed on the next working day. About 20,000 miners in Alabama refused to accept the settlement which they claimed was not as favourable to them as to the miners in the Appalachian coal fields. A settlement of this phase of the strike has not been noted.

On April 2, a chocolate factory at Hershey, Pennsylvania, ceased operations owing to a sit-down strike by workers who wished to establish a union affiliated with the Committee for Industrial Organization. Not all the workers supported the strikers and on April 7 non-striking employees together with a number of farmers, whose market for milk depended upon the operation of the factory, drove the strikers from the plant. By April 9 the factory was alleged to be working with at least half of its former employees. Later in the month it was reported that two thirds of the employees had voted to be represented by a union known as the Loyal Workers' Association rather than by the union which had arranged the strike.

On April 21 members of the International Longshoremen's Association at Atlantic ports in the United States refused to work at loading and unloading the ships of certain lines involved in a jurisdictional dispute at Montreal. They returned to work on April 23 after a conference in which the National Independent Union of Longshoremen of Montreal was granted an international charter.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1
Summary of Recent Decisions

REPORTS have been received of two cases settled recently by the Canadian Railway Board of Adjustment No. 1. Earlier decisions were outlined in the LABOUR GAZETTE, February, 1937, page 158 and in previous issues; and the sixth report of the proceedings of the Board, covering the period from October 1, 1933, to September 30, 1936, was issued as a supplement to the February issue of the LABOUR GAZETTE.

The Board was established under a voluntary agreement concluded in 1918, between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. It has power to determine all differences arising between the railway companies and the members of any of the six railway brotherhoods, "including the interpretation of wage schedules or agreements having due regard to the rights of the several classes of employees and of the railways respectively."

The Board consists of six representatives of the railway companies and six representatives of labour, one for each of the following Railway Brotherhoods: the Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; the Brotherhood of Railway Trainmen; the Order of Railroad Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

Case No. 457—Canadian National Railways (Central Region) and the Brotherhood of Railroad Trainmen.

This case concerned the claim of a conductor and two brakemen for time run off their assignment, way freight Lindsay to Midland and return on December 24 and 28, 1935, and January 4 and 7, 1936.

Employees' Contention.—The employees contended that the conductor and brakemen should be compensated for their time run off their assignment, way freight Lindsay to Midland and return on the days mentioned above, in accordance with Article 12 Rule (*d*) of the current Roadmen's schedule. The Employees claimed that "the regular laid out day's trip was Lindsay to Midland one day and Midland to Lindsay the following" and that "between their regular laid out day's trip, on the dates for which time is claimed . . . this crew was ordered to go from Atherley Junction, a point on the main line, to Washago and return, a distance of 20 miles, and not a part of their regular assignment, "in fact Washago is entirely off their promotion territory." The employees' Committee claimed that the crew was entitled "to miles or hours whichever the greater, in addition to regular mileage made on their own assignment."

Railways' Contention.—The railways claimed that the movement from Atherley to Washago and return was a side trip to perform service in connection with their own train, and did not consider that Article 12 Rule (*d*) quoted by the employees applied, as the service required of the crew in question was not out of the turning point and not between regular laid out days' trips. It was also stated that if Article 12, Rule (*d*) was applicable in the instance referred to, it would also apply to all side trips en route.

Both parties to this dispute appeared before the Board and presented evidence in support of their respective contentions. The decision of the Board was that "under the conditions of this particular case the claim of the employees is sustained."

Case No. 458—Canadian National Railways (Central Region) and the Brotherhood of Railroad Trainmen.

This dispute concerned a claim made by a Conductor and two Brakemen in connection with being tied up at Montreal on February 17, 1936.

On February 17, 1936, due to severe weather conditions, train No. 2 did not leave Ottawa until 5.13 p.m. (10 hours 43 minutes late), arriving in Montreal at 8.00 p.m. (11 hours 10 minutes late). The conductor and brakemen concerned in the dispute handled this train and booked off duty at Montreal at 8.10 p.m. This crew was not available at Montreal for its regular assignment on train No. 51 departing at 3.40 p.m. and its work in connection with train No. 2 was not completed in sufficient time to deadhead it to Ottawa on train No. 1, which due to adverse weather conditions, did not leave Montreal until 8.10 p.m. (1 hour late). As there was no train after No. 1, on which this crew could be deadheaded to Ottawa to handle its regular assignment out of Ottawa on February 18, it was tied up at Montreal and held for train No. 1, on February 18, which was its next assignment out of Montreal.

Claim was made for compensation on the basis of continuous time from the time required to report for duty at Ottawa for train No. 2, on February 17, 1936, until released from duty at Ottawa after arrival on train

No. 1, February 18, 1936, amounting to 13 miles initial terminal time, 232 miles road mileage, 16 hours, 58 minutes overtime and 3 miles final terminal time, a total of 565 miles. A claim for continuous time was declined.

Employees' contention.—The employees claimed that for a long period of years the practice has been to pay the crew in this service continuous time from Ottawa to Montreal and return to Ottawa, this method of payment being to the advantage of the Company; and that therefore the Company had not the right to change the method of payment because the crew could not follow out their regular schedule on account of trains running late.

Railways' contention.—The railways contended that the crew in question was regularly assigned in continuous service Ottawa to Montreal and return, Ottawa being both the initial and final terminal and when the crew was tied up at Montreal they were tied up between terminals and properly compensated therefor in accordance with the provisions of Article 32 of the Schedule.

The Board decided that the claim of the employees was not justified under the Schedule rules and should, therefore, be denied.

CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2

Summary of Recent Decisions

REPORTS have been received of two cases recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2. Outlines of previous cases were given in the LABOUR GAZETTE, December, 1936, page 1111, and in previous issues.

The issue of August, 1930, contained a general summary of the proceedings of the Board, covering the period from January 1, 1928, to December 31, 1929; and a similar summary of proceedings from September 1, 1925 (the date of the inception of the Board), to December 31, 1927, appeared in the issue of October, 1928, page 1060. The text of the memorandum of the agreement made between the railways and the employees concerned for the establishment of the Board was given in these summaries.

The Canadian National Railways Employees' Board of Adjustment No. 2 was established for the purpose of disposing of outstanding grievances or disputes that might arise from the application, non-application or interpretation of the schedule of working conditions for "Clerks and other Classes of Employees as herein named," which are not adjusted between the officers of the railway and the representatives of the employees. The members of the Board are appointed for a term of one year, subject to reappointment. The Board is composed of four members selected by the management and four members selected by the representatives of the employees concerned. The decisions of the Board are binding upon the parties to the agreement. Provision was made, in the agreement constituting the Board, for the appointment of an arbitrator in any case in which the Board might be unable to agree upon an award.

Case No. 130—Operating Department (Central Region)

This case concerned a dispute in connection with a certain employee taking employment outside of the railway in place of exercising his seniority to a position with the railway.

In the joint statement of facts, it was pointed out that commencing with the spring of 1926, the stationary boilers at Niagara Falls had been closed down each summer; and that in the spring of 1926, the employee in question exercised his seniority rights to the position of Engine Cleaner returning to his regular position of Stationary Fireman in October when that position was re-established. Similarly in the spring of 1927, the employee referred to again exercised his seniority as a common labourer effective May 16, 1927, and continued in that capacity until the end of June when he obtained leave of absence for personal business. He returned to service as a stationary fireman in October, 1927. This procedure was repeated in 1928, however, in the spring of 1929 the employee did not exercise his seniority and was reported as laid off. Since then he has returned to the service as a stationary fireman each fall when the stationary boilers were placed in operation, and has been shown as laid off each spring when the boilers were closed down.

When the stationary boilers were closed down on May 10, 1936, there were a number of classified and unclassified labourers working who were junior to the employee referred to in the dispute, who was advised by the Locomotive Foreman that he was obliged to exercise his seniority rights and displace a junior employee.

Employees' Contention.—The employees contended that the exercising of seniority rights is the prerogative of the employee who is displaced, or whose position is abolished, and that there is nothing in Article 3, Clause (*k*) which can be interpreted to mean that an employee can be forced to exercise seniority rights against his will, and therefore a displaced employee for one whose position is abolished can properly refrain from displacing a junior employee who may be working at the time, and retain his seniority rights under Article 3, Rule (1) to be called back to the service when his former position is re-established.

Railways' Contention.—The railway contended that the abolition of the position of Stationary Fireman did not necessitate the employee concerned being laid off, as he had sufficient seniority to entitle him to steady employment. Referring to the first sentence of Article 3, Rule (*k*) which reads as follows: "When reducing forces, senior employees with sufficient ability to perform the work will be retained," the railway maintained that this wording contemplates that employees having sufficient seniority to entitle them to steady work will exercise such seniority, and that it was not the intent of this rule that a man whose position was abolished and whose seniority entitles him to steady work should be permitted to take employment outside of the railway in preference to exercising his seniority.

General Statement.—This case was heard on November 17, 1936. The Board was later informed that the employee concerned had resigned from the service and the General Chairman wished the case to be withdrawn which request was acceded to.

Case No. 182—Sleeping, Dining and Parlor Car Department (Western Region)

This case concerned the claim of a Sleeping Car Porter for additional pay for Deadheading in Charge of two sleeping cars.

Joint Statement.—The employee concerned left Winnipeg June 3, 1936, in extra service to Montreal, arriving there on June 5. He was doubled out of Montreal deadhead on June 5 to Winnipeg with two deadhead cars. For this service the employee received six and one-half days' pay.

Employees' Contention.—The employees contended that in addition to the six and one-half day's pay the Porter received, he is entitled to additional compensation for handling two cars on the return journey in accordance with the provisions of Article 8, Rule (*b*) of the Schedule which states "In cases of emergency, Porters called upon to perform porter's duties in two (2) cars shall be paid extra to the monthly rate at *pro rata* rate for the time actually worked in such emergent service."

Railway's Contention.—The railway contended that Clause (*b*) Article 8 was drafted, and put into the schedule to take care of an emergency whereby it becomes necessary for an employee to perform regular service duties in more than one car en route and in which event, he is then compensated in accordance with Clause (*b*), Article 8 in the Employees' Schedule. The railway also pointed out that there is nothing in the Employees' Schedule in respect to compensation for employees who are assigned to cars being moved deadhead from one point to another. The railway contended that the porter concerned had been fully compensated for the duties performed by him on the trip referred to and that the claim submitted by him for additional compensation is not justified.

General Statement.—Both parties appeared before the Board and submitted additional oral evidence in support of their respective contentions. As the service performed by the porter was considered as not having been an emergent service, the claim of the employees was denied.

Annual Report to Employees of Bethlehem Steel

The president of the Bethlehem Steel Company in the United States recently made public the Company's first "annual report to employees" covering the "human factors" of their relationship to the company. In presenting the report, the president said: "Annual reports to stockholders and the public on the financial status of companies are customary. I believe it is quite as fitting that there should be an annual audit and report on the human factors which make possible these accomplishments, especially as the employees are so directly concerned in the proper conduct and accounting of these activities."

Features of the report included an announcement of the continuance of the plan of vacations with pay for workers which was inaugurated last year at an estimated cost of $1,000,000 to the company; the disbursement of $840,000 in pensions by the Company without any contribution by employees; the increase in the number of employees by more than 16,000 during 1936, making 86,000 employed in the company in the United States at the end of the year; the setting of a new record for safety in 1936, with the accident rate 10 per cent below 1935, and the adjudication of 722 major cases; of which 592 were decided in favour of the employees, under the plans of employee representation effective in the different plants.

The report also refers to a recent increase in wages, a 40-hour week, time and a half for overtime and to expansion in property and operations.

LABOUR LEGISLATION ENACTED BY THE PARLIAMENT OF CANADA AND THE LEGISLATURES OF ONTARIO AND MANITOBA IN 1937

During the session of the Parliament of Canada, which began on January 14 and ended on April 10, 1937, laws were enacted dealing with unemployment relief, housing and pensions for the blind.

Unemployment Relief

The Unemployment and Agricultural Assistance Act, which received the Royal Assent on April 10, is generally similar to the statute passed in 1936 under a like title. The 1937 Act provides that the Governor General in Council may, out of moneys appropriated by Parliament, authorize the execution of such works and undertakings as he may determine to be in the general interest of Canada and requisite for the purposes of the Act, giving employment as far as practicable to relief recipients registered with the Employment Service of Canada in the Province in which such work or undertaking is to be performed. Where any such work or undertaking to which the Dominion Government is contributing is under provincial jurisdiction all contracts must be approved by the Minister of Labour and the work supervised by an officer of the Dominion Government.

The Act further empowers the Governor General in Council to make agreements with the provinces for the alleviation of unemployment and agricultural distress, and provides for financial assistance to any province by way of loan or guarantee, not exceeding the total amount payable by the province for its share of the expenditures under any agreement entered into under authority of the Act together with the amount for which the province may be obligated for commitments made under the Act of 1936 and continued under agreements entered into under the 1937 Act. A new section provides that no financial assistance shall be granted to any province unless the province furnishes the Dominion with certified financial statements when and in the form required and with such other information and permits such examination and audit as the Dominion may deem necessary.

The Governor in Council may also make agreements with corporations, partnerships, or individuals engaged in industry respecting the expansion of industrial employment, may renew or consolidate advances, loans, or guarantees made or renewed under authority of the Act, and may make regulations for carrying out its provisions. The Act will expire on March 31, 1938, except as regards the clause authorizing the renewal or consolidation of loans, advances, or guarantees, but obligations or liabilities incurred or created under authority of the Act may be discharged.

A report on the moneys expended or loaned, guarantees given and obligations contracted, is to be laid before Parliament within thirty days after the expiration of the Act or, if Parliament is not then in session, it is to be published and made available for distribution by the Department of Labour.

Home Improvement Loans

The Home Improvement Loans Guarantee Act, 1937, which received the Royal assent on March 31, is designed to give statutory effect to the Home Improvement Plan announced by the Prime Minister on September 8, 1936. The plan was recommended by the National Employment Commission as a means of increasing employment by stimulating construction. The Act provides that the Governor in Council may guarantee lending institutions approved by him for the purpose of making Home Improvement Loans against losses which they may sustain as a result of making such loans. The liability of the Government is limited to 15 per cent of the total amount of the loans made by any such institution, and may not exceed in all the sum of $7,500,000.

The conditions with which a lending institution must comply in order to obtain the Government guarantee are as follows: That no loan on a single property shall exceed $2,000 except in the case of a multiple family property when the maximum loan is $1,000 for each family unit on the property as improved plus the sum of $1,000; that the loan shall be made only to the owner of the property; that the term of the loan may not exceed three years, if for $1,000 or less, and five years if over that amount, and shall be repaid in convenient periodic instalments; that the maximum charge shall not exceed 3½ per cent for a one-year loan repayable in equal monthly instalments and proportionate rates for other periods; that as long as the borrower is not in default, no service, insurance, or other charges shall be made and no security by way of endorsement or otherwise shall be taken.

Regulations which the Governor in Council is authorized to make may deal generally with the administration of the Act, provide for steps to be taken by a lending institution in cases of default by a borrower, and may require reports to be made to the Minister of Finance by lending institutions.

The annual report of loans made under the Act is to be laid before Parliament within fifteen days of the close of the fiscal year or, if Parliament is not then sitting, within fifteen days after the beginning of the next session.

A penalty ranging from $25 to $500 may be imposed upon any person making a false statement in applying for a home improvement loan or improperly using such a loan. The Act applies to loans made after October 15, 1936, by any approved lending institution or by any institution approved by the Governor in Council after the Act comes into force.

Pensions for the Blind

An amendment to the Old Age Pensions Act, which was assented to on March 31, provides for the payment of pensions to blind persons who have attained the age of forty years and have fulfilled the other conditions set forth in the Act. Such persons must be, and continue to be, so blind as to be unable to perform any work for which eyesight is essential, must not be in receipt of a pension or allowance in respect of blindness under the Pension Act or the War Veterans' Allowance Act. The income of such person must be under $440 a year, in the case of an unmarried person or a childless widow or widower, or $640 a year in the case of a married person, widow or widower with children. "Child" is defined to mean a son or step-son under 16 years of age and a daughter or step-daughter under 17 years; also a son, step-son, daughter, or step-daughter over those respective ages, but under 21 years of age who is unable to earn a livelihood because of mental or physical incapacity. The following conditions which were laid down in the principal Act must also be fulfilled. The applicant must be a British subject or, if a widow who is not a British subject, must have been such before her marriage; must have resided in Canada for twenty years and in the province in which application is made for five years immediately preceding the date of application; must not be an Indian as defined by the Indian Act and must not have made a voluntary assignment or transfer of property for the purpose of qualifying for a pension.

The maximum pension payable to a blind person, whether married or unmarried, is $240 per annum the same as that payable to a sighted person at the age of 70 years. The maximum pension is reduced to $120 per annum, however, in the case of a blind person who marries another blind person after the coming into force of the Act. The pension is subject to reduction by the amount of the pensioner's income in excess of $200 a year in the case of an unmarried person, a childless widow or widower or a person married to a blind pensioner, and by the amount of such income over $400 a year in the case of a married person, widow, or widower with one or more children. Married persons or widows or widowers with children are not entitled to a larger pension than unmarried persons unless they are living with their spouses or their children, as the case may be.

The Governor General in Council may make regulations providing for the interpretation of the expression "is so blind as to be unable to perform any work for which eyesight is essential," for the medical examination and other evidence necessary to establish that a person is suffering from such blindness and for the definition of the words "married," "unmarried," "widower," "widow."

Bills

Three Bills of Labour interest were introduced but received first reading only.

A Senate Bill for an Act respecting Employers and Employees would have rendered it unlawful for any employer to maintain a checkoff or similar system or to send or transfer any money out of Canada to or for any trade union. The Bill would also have required all monies received in Canada by or for any trade union to be deposited by the proper officer of such union in a chartered bank of Canada to the credit of the union concerned. Any breach of this provision would have been an offence against the Act and would have been deemed to be sufficient evidence, in any proceedings over which the Parliament of Canada has jurisdiction, that such trade union was an unlawful association. Books, records, and banking accounts of a trade union would have been subject to inspection by an official nominated by the Governor in Council. The Bill would also have made it unlawful for any representative of a trade union other than a Canadian citizen resident in Canada to intervene in any strike and such person would have been liable to deportation. The penalty for an offence against the above provisions would have been a fine not exceeding $10,000 or imprisonment for not more than two years or both.

A Bill to amend the Criminal Code would have made it an offence for an employer or his agent to refuse to employ or to dismiss from his employment any person for the reason that such person was a member of a trade union; to seek by intimidation, threat of, or actual loss of position or employment, or by imposing any pecuniary penalty, to pre-

vent workmen or employees from belonging to a trade union, or to conspire, combine, agree or arrange with any other employer or his agent to do any of such things. The penalty for breach of these provisions would have been, in the case of an individual, a fine not exceeding $100 or not more than three months' imprisonment with or without hard labour, and in the case of a company or corporation a fine not exceeding $1,000.

A Bill to amend the Lord's Day Act would have provided a penalty for directors and officers of corporations permitting a violation of the Act.

Ontario

The Ontario Legislature, which was in session from January 19 to March 25, 1937, enacted new laws providing for minimum wages for men and women and the licensing of operating engineers and amended statutes relating to the Department of Labour, industrial standards, workmen's compensation, employment offices, apprenticeship, mothers' allowances, and old age pensions.

Minimum Wages

The Minimum Wage Act revises the existing law applying to female employees and extends its scope to include male workers. The new Act applies to all wage earners in any business, trade, work, undertaking or occupation, except farm workers and domestic servants, and is to be administered by the Industry and Labour Board established in the Department of Labour under the amended Department of Labour Act.

The Board is authorized to arrange conferences between employers and employees for the purpose of obtaining information as to prevailing wages and conditions of employment, and may accept the recommendations of such conferences. The Board may establish minimum wages and enact such provisions with respect to conditions of employment as may be deemed necessary to promote the physical, moral, and intellectual well-being of employees. In particular the Board may designate the business or parts thereof and the zone or zones to which an order is to apply and may classify employees, providing for one or more classifications with respect to any matter. It may fix minimum wages for the prevailing work-period in the establishment of any employer or for a work-period which the Board may establish and may fix maximum hours of labour with respect to any minimum wage established. Minimum hourly rates may be established for overtime and for employees who regularly work less than 40 hours a week. In these cases the hourly rate may not be less than one-fortieth of the weekly minimum wage, instead of an hourly rate based on the minimum weekly wage for the specified number of hours as in the old Act. The Board may establish a special method of payment for any classification of employees, specify when and under what conditions deductions may be made for time lost through illness, holidays, or for any other reason, and also for special privileges or perquisites. As in the former Minimum Wage Act for women, hours of labour for which the minimum wage is established may not exceed 48 hours in a municipality having a population of over 50,000, 50 hours where the population is between 10,000 and 50,000, and 54 hours in other parts of the province. There was omitted from the new Act the stipulation in the old Act that in any establishment where the prevailing weekly hours as determined by the Board are less than the maximum specified, such prevailing hours should be considered as the maximum number to which the minimum wage applied. The Bill as introduced gave the Industry and Labour Board power to limit hours of labour but this section was revised in the Legislature.

A new section declares that every employer who permits an employee to perform work for which a minimum wage has been established shall be deemed to have agreed to pay not less than such wage. Slight changes are made in another section which authorizes the Board to approve a written agreement between an employer and an employee for the payment by instalments of any arrears of wages owing by the employer under the provisions of any order. Failure to carry out the terms of such agreement is to be deemed to be a breach of the terms of the order.

The Act, as revised, requires employers to keep orders affecting their employees posted in a conspicuous place. Formerly, the Board was given power to require orders to be posted, and, if required, such notices had to be posted under penalty of a fine of $20, as laid down in the Factory, Shop and Office Building Act. In practice all orders were required by the Board to be posted. Orders may become effective on a date named in the order as gazetted or, as before, from the date of publication in the *Ontario Gazette*.

For discharging or discriminating in any way against an employee who has given information to the Board or taken part in any proceedings under the Act, an employer is

made liable to a minimum fine of $50, instead of $25.

An employer who contravenes the provisions of any order respecting wages and hours is now liable to a minimum penalty of $25 for each employee affected and in default of payment to a period of imprisonment not exceeding six months. For a subsequent offence the minimum fine is $50 for each employee or imprisonment for not more than one year. Formerly, the penalty in all cases ranged from $25 to $500 for each employee affected and in default of payment a prison term not exceeding six months might be imposed. As formerly, a convicted employer must pay to the Board, on behalf of the employees affected, the difference between the wages paid and the established minimum. Formerly such difference was to be paid for a maximum period of one year. In default of payment a term of imprisonment of not less than ten days or more than six months could be imposed. Under the revised statute, however, if the court, in determining the amount of arrears, finds that the employer has not kept accurate records, the employees in question are to be conclusively presumed to have been employed for the maximum of hours per week permitted and to be entitled to the full weekly wage for the total period of their employment.

Labour and Industry Board

The Department of Labour Act was amended to provide for the creation of an Industry and Labour Board to administer such statutes as may be assigned to it. The Board is to consist of five members, including three officers of the Department of Labour, appointed by the Lieutenant-Governor in Council, who may grant to any member not an officer of the Department a per diem allowance while transacting the business of the Board. It is to be a body corporate and is empowered, with the approval of the Lieutenant-Governor in Council, to make regulations governing its proceedings. The Board, or one of its members, has full powers to hold public inquiries in order to obtain any information required by the Department concerning wages, hours of labour or other conditions of employment in any industry when so authorized by the Minister of Labour. Formerly such information could be obtained by an officer of the Department of Labour, when authorized to do so by the Lieutenant-Governor in Council. Other amendments make clear that inspectors of the Department have the right of access to premises governed by the Act. The Industrial Standards Act and the One Day's Rest in Seven Act were added to the list of statutes to be administered by the Department of Labour.

37719—3

Industrial Standards

The Industrial Standards Act was the subject of a number of amendments. The administration of the Act was transferred from the Minimum Wage Board to the Industry and Labour Board which is also empowered to hear appeals from the decisions of any advisory committee (formerly an advisory board) to amend, with the concurrence of the proper advisory committee, the provisions of any schedule, to receive and collect wages due to an employee under any schedule and disburse the same in accordance with the regulations of the Board, and to determine which industries are interprovincially competitive. With respect to such industries the Board may approve or withold approval of the provisions in a schedule relating to the collection of revenue from employers and employees and to the exercise by the advisory committee of any powers in connection with the collection of such assessments and the disbursement of moneys collected, provided that the assessments which may be approved shall not exceed one-half of one per cent of an employee's wages and a like percentage of an employer's payroll. In the case of such industries the Board may also require the advisory committee to furnish estimates of receipts and expenses annually and to furnish quarterly reports, certified by an auditor approved by the Board, accounting for all money collected and disbursed.

The definition of "industry" was amended to enable the Minister of Labour to determine what constitutes an industry for purposes of the Act. New subjects were added to those which may be agreed upon by employers and employees in any industry and embodied in a schedule for submission to the Minister for approval. Such a schedule may now prescribe the hours of the day during which the hours of work fixed by the schedule may be performed; classify employers as well as employees; specify the particular operations which are included in the industry; prohibit overtime work without a permit and authorize the advisory committee to issue such permits, subject to the terms of the schedule; fix the minimum charge which may be paid, accepted or contracted for with respect to the labour content of any service or operation and, with the approval of the Board, fix the minimum charge which an employer or employee may contract for or accept for any service or work; authorize the advisory committee to fix a minimum wage lower than the rate fixed by the schedule for any class of employees or for any individual who performs work included in more than one class or whose work is only partly subject to the provisions of the schedule or who is

handicapped; subject to the approval of the Board and with respect only to an interprovincially competitive industry, assess employers only or employers and employees in any such industry to provide revenue for the enforcement of the schedule and authorize the advisory committee generally to administer and enforce the schedule and to collect such assessments, and out of the revenue collected to engage inspectors and other personnel and to make the necessary expenditures for such administration and enforcement.

An Order in Council approving a schedule may specify the date on which it is to come into effect, otherwise it becomes effective on the tenth day after it is gazetted. The section, added in 1936, which provided for the holding of a new conference when a schedule had been in force for at least twelve months was repealed.

New provisions replace the section which permitted the Minister to inquire into any partnership or association and, if such was being used to defeat the purposes of the Act, to declare any or all members of the association to be employees within the meaning of the Act and regulations. The new section declares that every person engaged in any industry shall, in so far as he personally performs work in such industry, be deemed an employee and, in so far as he employs another person or is the proprietor of a business either alone or in partnership with another, be deemed an employer. The Act and regulations and schedules are to be construed accordingly, notwithstanding that such person may thereby become both an employer and an employee.

The clause requiring an employer to produce records, pay-rolls, etc., for inspection was amended to require him also to give access to his premises at all reasonable times to any person authorized to make such inspection.

The Act formerly authorized the Minister to set up an advisory board of not more than five members for each zone or group of zones covered by a schedule, to hear complaints, assist in carrying out the provisions of the Act and fix minimum wages for handicapped workers. The title of this body has now been changed to "advisory committee" and its jurisdiction extended to include anything which it is authorized by the schedule to do. Where the committee is authorized to collect or pay money, it is to be deemed for this purpose to be a corporation.

Formerly an employer violating the provisions of a schedule was to be ordered to pay the amount of unpaid wages to the employees affected or, if an employee had participated in the offence, to the Board for the purposes of the Province. This section has been amended to provide that in all cases such unpaid wages shall be paid to the Board.

Workmen's Compensation

An Act to amend the Workmen's Compensation Act provides that the Board may, of its own motion, refer a question to a medical referee. Formerly such reference could only be made on application of the employer or workman concerned. The definition of "tuberculosis" was made clearer and the time limit for making a claim for disability caused by silicosis, which formerly was two years from the date of leaving employment, was extended to three years. As before, the Board may allow any case due to uncomplicated silicosis which it considers should in justice be allowed.

The schedule of industrial diseases was amended by the addition of the following: Retinitis due to electro-welding or acetylene welding; poisoning by carbon bisulphide, carbon dioxide, carbon monoxide, or their sequelae; poisoning by brass, zinc, or metal or by nitrous fumes or their sequelae; inflammation of the synovial lining of the wrist joint and tendon sheaths.

A further change in the Workmen's Compensation Act, which was effected by the Statute Law Amendment Act, entitles a disabled workman to the aid of drugless practitioners on the same terms as medical aid.

Factories, Shops and Offices

The Statute Law Amendment Act also amends the Factory, Shop and Office Building Act to correct verbal errors and to make its wording accord with the taking over by the Industry and Labour Board of the powers and duties of the Minimum Wage Board.

Employment Offices

The Employment Agencies Act was amended to include agencies procuring persons for employment in any profession or business as well as for employment in skilled and unskilled work. All such agencies are thus required to be licensed.

Apprenticeship

Amendments in the Apprenticeship Act divide apprentices into two classes which are included in schedules A and B. Schedule A covers motor vehicle repairing and the building trades, while Schedule B applies to hairdressing and barbering. Trades not included in the schedules may be brought within the scope of the Act on the same terms as formerly. The term "apprentice" where used

in respect of a trade in Schedule A includes only minors 16 years of age and over, but when used in reference to a trade in Schedule B may include any person 16 years of age and over.

Trade schools which train or profess to train persons for designated trades, except schools or colleges subject to the jurisdiction of the Department of Education, are brought within the scope of the Act and required to be licensed.

No person who is eligible to be an apprentice in a designated trade and has not completed his period of apprenticeship may be employed in such trade for more than three months except under a contract of apprenticeship in accordance with the Act.

The Lieutenant-Governor in Council is authorized to make regulations for the granting of certificates of apprenticeship to apprentices who serve the prescribed term and complete their school training to the satisfaction of the Board. The regulations may also lay down the conditions upon which a licence may be issued to a trade school, fix the fees for such licences, prescribe the method of training to be followed and the manner in which such schools are to be operated, and may provide for the cancellation, suspension, and renewal of such licences. Where a trade school is carried on by means of offices, branches, or agencies in different municipalities a separate licence is required for each branch. Any person carrying on a trade school without a licence is liable to a fine of not less than $100 and in default of payment to imprisonment for not more than six months. The administration of the Act is transferred to the new Industry and Labour Board.

Operating Engineers

The Operating Engineers Act was revised to bring it into accord with present practice, but no major changes were made in its provisions.

Mechanics' Liens

The Mechanics' Lien Act was the subject of a number of amendments designed to make clear the meaning of certain sections and generally to simplify procedure.

Vocational Education

An amendment to the Vocational Education Act, effective from January 1, 1937, provides that the cost of education of county pupils attending vocational schools and schools with vocational departments shall be borne in equal shares by the county and the municipality in which such pupils reside, instead of by the county alone as formerly.

37719—3½

Mothers' Allowances and Old Age Pensions

An Act to amend the Mothers' Allowances Act, which comes into force on April 1, 1937, relieves municipalities from the liability to contribute to any allowance granted under the Act and payable after March 31, 1937. Liability for contributions to allowances paid prior to April 1, however, is to continue. Provision is made for the appointment in each county, city, and separated town of a local board for the purposes of the Mothers' Allowances Act and the Old Age Pensions Act. The Board is to be composed of five members, two of whom are to be appointed by the council of the municipality and three by the Lieutenant-Governor in Council, including in each group one woman. The Government may, however, appoint a separate board for each Act or may dissolve any local board. The clerk of a municipality, or such officer as the council may designate, is to be a local authority for the purpose of receiving applications under the Mothers' Allowances Act. Written notice of the granting of an allowance is, as formerly, to be given to the local board of the municipality in which the applicant resides. The Minister, with the approval of the Lieutenant-Governor in Council, may make regulations providing for the appointment of investigators for unorganized territory and prescribing their duties and the duties of local boards.

Amendments similar to the above were made in the Old Age Pensions Act, and the definition of "old age pension" was altered to include a pension payable to a blind person under the Old Age Pensions Act (Canada) and amendments thereto.

The Municipal Employees' Pension Fund Act enables any municipality to pass a by-law establishing a pension scheme for its employees or any class or classes of them. School teachers and inspectors and the employees of the Power Commission who come under other pension schemes are excluded. All pension funds are subject to approval and control of a Provincial Pensions Board to be designated by the Lieutenant-Governor in Council and all schemes are to be on a contributory basis both for the municipality and for the employees, the contributions of employees being deducted from wages. The Pensions Board must have every fund reviewed at least once in five years to ascertain whether it is being maintained on an actuarially sound basis and funds must be so amended to maintain actuarial soundness as the Board may direct.

The Income Tax Act was amended to limit to $300 the exemption in respect of moneys

retained by an employer for superannuation or pension fund purposes.

Bills Not Passed

Two Bills of interest to labour were introduced but not passed. A Bill to amend the Mining Act would have given every employee of a mine or mining corporation the right to choose his own medical attendant in case of illness or accident. The other Bill would have fixed a minimum wage of $40 per month, exclusive of board and lodging, for men employed on a piece-work basis at cutting, skidding, and bunching logs in the course of operating a lumber or pulpwood camp.

Manitoba

Several laws of labour interest were enacted by the Manitoba Legislature which met on February 18 and was prorogued on April 17, 1937. These included a new statute dealing with industrial disputes and amendments in laws concerning unemployment relief, taxation of wages and the hours of labour of drivers of public service vehicles.

Strikes and Lockouts Prevention Act

The Strikes and Lockouts Prevention Act, which repeals the Industrial Conditions Act passed in 1919 and amended in 1920, contains somewhat similar provisions to those of the Industrial Disputes Investigation Act passed by the Parliament of Canada in 1907.

It will be remembered that the Industrial Disputes Investigation Act, which applies to disputes involving employers of ten or more workers employed in transportation, communication, mining and public utilities, was, in 1925, declared by the Judicial Committee of the Privy Council to be *ultra vires* of the Parliament of Canada in certain respects. Following this decision the Act was amended to make it applicable to the disputes in industries in the classes covered which are within the competence of the Dominion and to disputes in industries in those classes which are within the exclusive jurisdiction of any province if by legislation of that Province they are made subject to its provisions. In the years from 1926 to 1932, all the provinces except Prince Edward Island passed legislation making the Dominion Act applicable to disputes within the province. In Manitoba, the enabling statute was enacted in 1926.

The Strikes and Lockouts Prevention Act of Manitoba applies to labour disputes which have not been made subject to the Industrial Disputes Investigation Act of the Dominion but it does not apply to domestic service or agriculture. Like the Industrial Disputes Investigation Act, it has to do only with disputes involving employers of ten or more workers and provides for the appointment of a board of conciliation and investigation by the Minister to deal with a dispute on the application of either party to the dispute or of the Minister's own motion where a dispute has occurred or seems imminent and it seems to him expedient to appoint a board.

Strikes and lockouts are prohibited under the Manitoba Act after an application has been made for a board, unless the application is refused or is not granted within seven days, or during a reference of the dispute to a board. Under the Industrial Disputes Investigation Act, all strikes and lockouts in the industries covered are forbidden until the dispute has been dealt with by a board. Both statutes provide that where an intended or desired change affecting wages or hours of labour results in a dispute, a strike or lockout is forbidden until an application for a board has been refused or the dispute has been dealt with by a board and a report made.

In both statutes, it is provided that where a dispute exists, either party may apply to the Minister of Labour for the appointment of a board of conciliation and investigation. In Manitoba, when application is made for a board, the Minister may authorize such person as he thinks fit to inquire into the matter for the purpose of bringing about a settlement, or, if satisfied that the dispute is a proper one for reference to a board, he may appoint one and refer the dispute to it. In the former case, the person appointed is given full powers of a commissioner appointed under the Manitoba Evidence Act. He must report to the Minister within fifteen days or such time as the Minister may prescribe, and if, after considering the report, the Minister is satisfied that a board is necessary he is to appoint one within seven days. Any party to the dispute may apply to the Minister to terminate the authorization of such person and the Minister may do so and appoint a board.

Application for a board is to be made in writing in prescribed form to the Registrar of Boards of Conciliation and Investigation for the province appointed under the Act and is to be accompanied by a statement setting forth the parties to the dispute, the nature and cause of the dispute, an approximate estimate of the number of persons affected, the efforts which have been made towards adjustment and a statutory declaration that, failing an adjustment or a reference

to a board, to the best of the knowledge and belief of the declarant, a strike or lockout will be declared.

Application may be made by one or more employers, whether they be individual employers or corporations acting through their duly authorized officers, or by two officers of a trade union acting on behalf of the members of a trade union when authorized in writing by a majority of the union members directly affected, or by two employees acting on behalf of their fellow employees, some or all of whom are not members of a trade union, when authorized in writing by a majority of the employees directly affected.

Under the Manitoba Act, it is provided that a board is to consist of not less than three members; under the Dominion Act the board has only three members. Each member of a board, under both statutes, must be a British subject, appointed by the Minister from persons nominated by the parties to the dispute. In Manitoba, if either party fails or neglects to make nominations within the period prescribed by the Minister, which may not be less than forty-eight hours, he may appoint such persons as he sees fit. The members of the board may recommend a chairman and if they fail to do so within three days after their appointment, or within such extension of time as the Minister grants, the Minister may make the appointment. No person may act as member of a board if he has any direct pecuniary interest in the issue of the dispute.

A board has power to inquire into all matters affecting the merits of the dispute and to make such suggestions and do such things as it deems proper for inducing the parties to come to an amicable settlement, to compel attendance of witnesses and production of documents, to take evidence under oath, to inspect premises and question any person on such premises and to employ experts on any matter at issue.

If a settlement is arrived at, a memorandum of such settlement is to be drawn up and signed by the parties and a copy forwarded with a report to the Minister. Where no settlement is arrived at, the Board is to report to the Minister. No parties in the same interest to a reference may be represented before the Board by more than three persons. All such persons must be British subjects unless the Board permits otherwise. Members of the Board are to receive such remuneration for their services and expenses as may be fixed by the Lieutenant-Governor in Council and no member may accept any gratuity from any interested party under a penalty not exceeding $1,000.

As in the Dominion Act, the finding of a board of conciliation and investigation is not binding on the parties unless they have agreed in writing, before the board makes its report, to be bound by the Board's recommendations. In such case, the agreement constitutes a binding submission to arbitration.

Any employer making effective a change in wages or hours over which there is a dispute or any employee going on strike in a dispute concerning wages and hours until an application for a board has been refused or the dispute has been dealt with by a board and a report made to the registrar of boards of conciliation and investigation, is liable to a fine of not less than $10 and not more than $1,000. Any person inciting or aiding an illegal strike or lockout is liable to a fine of not less than $50 or more than $1,000.

The Lieutenant-Governor in Council is given authority to fix the remuneration of board members and their expenses and to make regulations to carry out the provisions of the Act.

Finally, the Act reproduces certain provisions of the Industrial Conditions Act recognizing the right of employers and employees to organize for any lawful purpose and to bargain with one another individually or collectively through their organizations or representatives. A new section provides that a penalty of from $10 to $1,000 may be imposed upon any person who seeks by intimidation or threat to compel any employee to join or refrain from joining any union or association of employees in contravention of these rights.

The Act does not apply to any strike or lockout existing at the time of its coming into force, April 17, 1937.

Unemployment Relief

The Unemployment Relief Loan Act, 1933, which empowers the Provincial Government and the municipalities to borrow money to meet the cost of relieving distress and unemployment, was amended to continue it in force until April 30, 1938.

The Income Taxation Act, which repeals the Income Tax Act, 1924, and the Special Income Tax Act, 1933, is a revision of these two statutes. The sections of the latter Act which provided for a 2 per cent tax on wages have been retained, including the provisions for collection of the tax by the employer by deductions from wages. The amount of wages exempt from taxation is, in the case of a married person without a dependent child or children under 21 years of age, 50 cents an hour, $4 a day, $100 a month or $1,200 a year. Where there are children, an additional amount equal to one-sixth of that basic

rate for each child may be deducted. The amount exempt in the case of an unmarried person is 25 cents an hour, $2 a day, $50 a month or $600 a year. An unmarried person who has resident with him and totally dependent upon him, a parent, brother or sister under 21 years of age, a widow or widower who has a son or daughter under that age so resident and dependent, and a divorced person paying alimony under judgment of a court, is entitled to a refund of his tax if his total taxable income does not exceed $1,200 a year. An unmarried person having totally dependent upon him a mother who is resident in Manitoba but who is prevented from residing with him by the nature of his occupation, is also entitled to a refund if his income does not exceed $1,200 a year. As formerly, employers are required to keep records and produce them for inspection and to make returns to the administrator.

An amendment to the Highway Traffic Act provides that, except in case of emergency due to a break-down, no driver of a public service vehicle or commercial truck, including an owner who is also the driver, shall be on duty in driving such vehicle or truck for more than nine hours a day, or in any capacity for more than twelve hours in any twenty-four consecutive hours, or on duty for more than six days in any one week.

Bills

Four Bills of interest to labour were introduced but failed to pass. A Bill for an Act respecting the Right of Employees to Organize to Promote and Protect their Lawful Interests would have conferred on all employees the right to associate and organize themselves into a trade union, to bargain collectively with their employers and to conduct such bargaining through their trade union and its duly chosen officers or agents. The Bill would also have rendered it unlawful for an employer to impose or insert any condition or clause in a verbal or written contract or to continue such condition or clause in an existing contract, interfering with an employee in the free exercise of his rights under the Act. An employer who, by intimidation, pressure, threat of reduction of wages or loss of employment or by threatening any penalty, interfered with or prevented an employee in the exercise of his free rights under the above provisions would have been liable to a fine of from $10 to $100 and in default of payment to imprisonment from seven to thirty days or to both fine and imprisonment. In the case of a corporation the fine would have ranged from $100 to $1,000 and in default of payment the responsible officers would have been liable to imprisonment for from fourteen to sixty days. This Bill was ruled out of order as being similar to certain sections of the Strikes and Lockouts Prevention Act which had already been passed.

A Bill for an Act respecting the Extension of Collective Labour Agreements would have enabled the provisions of a collective agreement as to wages, hours of labour and apprenticeship between one or more employers and one or more associations of employees to be extended by the Lieutenant-Governor in Council to bind all employers and workers in the same trade or industry in the district covered by the agreement. Under the Bill any association of employers or employees, party to an agreement might have petitioned the Minister of Labour for the passing of an Order in Council. If the Minister deemed the request a proper one for consideration, he might appoint a board of three members including one representative each of employers and employees with an independent chairman. If the Board recommended that the request be acceded to, the Lieutenant-Governor would have been authorized to pass an Order in Council making the agreement binding under penalty.

A Bill to amend the Minimum Wage Act would have brought domestic servants and agricultural workers within its scope.

A Bill to amend the Shops Regulation Act would have enabled the owner of a shop affected by an early-closing by-law to obtain exemption from the operation of such by-law on application to the city clerk. In case of such exemption, each person employed in the shop on weekly or longer terms would have been entitled to one day's holiday with pay in each calendar week in addition to Sunday, except during the month of December. Employers would have been required to file monthly returns signed by the employees concerned.

The report of the Minister of Education of Ontario for 1935 contains a statement from the Director of vocational education which indicates that the enrollment in vocational schools totalled 33,561 day and 23,803 night pupils during 1935.

Commenting on the problem of finding work for vocational school graduates, the Director states that "in spite of the adverse conditions, however, vocational schools have been successful in securing situations for many of their graduates."

AMENDMENTS TO COMBINES INVESTIGATION ACT

Administration placed with Commissioner under Minister of Labour

AMENDMENTS to the Combines Investigation Act enacted at the recently ended session of Parliament had the effect of providing for administration of this Act by a Commissioner reporting to the Minister of Labour. The early adjournment of Parliament led to the deferring of other changes contemplated in the Bill to amend and consolidate the Combines Investigation Act which was introduced in the House of Commons on February 26 by the Minister of Labour. The Bill as introduced was reviewed in the LABOUR GAZETTE, March, 1937, pages 311 to 313.

After being passed by the House of Commons with certain amendments, the Combines Bill was referred by the Senate to the Senate Committee on Banking and Commerce for its consideration. Strong opposition by members of the Senate Committee to many of the provisions of the Bill, coupled with the desire for an early adjournment of the Parliamentary session, led to the substitution in the Senate of provisions reducing the measure to an amending Act providing for the transfer of administration from the members of the Tariff Board to a separate Commissioner under the Minister of Labour, and for the removal of a limitation on the use of documents in court proceedings which had been introduced into the Act by a Senate amendment to the amending Bill of 1935.

A further Senate amendment placing restrictions on the independent exercise of the Commissioner's powers to compel the attendance of witnesses and the giving of evidence was finally accepted with reluctance by the Minister and the Bill was enacted in this form upon being returned from the Senate for consideration by the House of Commons on April 10, the closing day of the session.

The Minister of Labour, in moving acceptance of the amended Bill in the House of Commons on April 10, indicated briefly the nature of the Senate amendments and reasons why their acceptance at that time might be recommended. His remarks included the following:—

Concurrence in Senate Amendments

"When Bill No. 41 was sent to the Senate and referred to the Banking and Commerce Committee of that House certain objection was taken to the Bill upon the ground that sufficient time did not remain for the proper consideration of its provisions. Without conceding that point, we recognized that it was desirable that we ought not to give any basis for objection upon that score. Therefore it was arranged that the Act of 1935 should be substantially re-enacted as an amendment to Bill No. 41, with certain significant changes.

"These changes are in the following terms. First, that the administration of the Combines Act should be transferred from the Trade and Industry Commission to a Commissioner under the Minister of Labour. Second, that the provision with respect to the admissibility of documents which had been twice rejected by the Senate should be incorporated in the present Bill.

"...The Senate has made an amendment to provide what might be described as judicial intervention before the Commissioner under the Combines Act can exercise his compulsory powers with respect to the summoning of witnesses and the production of papers. . . I think it will suffice to say at this stage that we are prepared to accept that amendment with considerable reluctance. That reluctance is not based upon any lack of confidence in the manner in which the functions imposed upon the Chairman of the Dominion Trade and Industry Commission or the President of the Exchequer Court of Canada may be discharged. My reluctance is concerned solely with my desire that no change in the existing legislation shall serve to impair the effectiveness of the method of investigation which was contemplated originally in the anti-combines legislation, and which has been provided for in all the subsequent amendments. My fear was, and is, that to require judicial intervention may lead to a dilatory procedure, which in turn may interfere with the effective administration of the Act. It may well be that my fears in that regard are groundless.

"I would say that during the coming year we shall have ample opportunity to determine how far the legislation as amended by the Senate will enable us to achieve the legitimate purposes of the Combines Investigation Act. If we find in practice that the amended legislation does not enable us to realize the purposes of adequate investigation of the large scale business operations of this country, then we will be prepared to introduce further amendments in this House at the next session. We have accepted the amendments, particularly in view of the fact that, as we approach what is generally conceded to be a phase of rising prices, we believe it is most imperative that the government should pos-

sess a Combines Act which will enable it to deal effectively with any abuses which may occur through the great power enjoyed by some business corporations or combines in producing an artificial enhancement of prices which is not due to the normal working of demand and supply."

Appointment of Commissioner

Appointment of F. A. McGregor as Commissioner of the Combines Investigation Act was announced on April 21 by the Minister of Labour. Under the Combines Investigation Act as amended the Commissioner will have charge of investigations into commercial combinations, monopolies, trusts and mergers in cases where organizations of this type are alleged to be operating to the detriment of the public. Mr. McGregor, as Registrar, was the chief executive officer under this Act from 1925 to 1935. He continued to act as Registrar of the Combines Investigation Act until his present appointment. The headquarters of the Combines Investigation Office will be established shortly in the Justice Building, Ottawa.

Vocational Education in New Brunswick

The eighteenth annual report of the New Brunswick Vocational Education Board for the fiscal year ending October 31, 1936, indicates that the total number of day-school pupils in attendance at vocational classes as at June, 1936, was 1,683. Enrollments in the evening classes totalled 1,215. There were 60 teachers in the day schools at an average salary of $1,590, while 50 teachers were engaged for the evening classes.

An analysis of the history of 338 students who graduated in 1936 showed that 154 secured employment along the lines of their training; 31 were otherwise employed; 66 were taking advanced work; 71 were at home; 8 were nurses in training; 3 were in part time employment, 2 were ill and the subsequent careers of three were unknown.

Director's Report.—The Director's report stated that "during the last two years there has been a decided change in the public mind regarding vocational education" and this change was apparent before the government decided to restore the grants, but was given impetus by such decision.

He observed that "parents are beginning to see that there are opportunities for their children outside of the professions and that their natural abilities should be considered by the time the child attains high school age."

Commenting on the necessity of vocational guidance, the Director states:

"When you take a boy who was intended by nature to be a plumber or carpenter or perhaps an ordinary day labourer and try to fit him to enter college to prepare himself for a professional job you are attempting the near impossible. A large percentage of the high school mortality is due to maladjustments in course selection. After observing the work in both vocational and academic high schools I am convinced that for the majority of boys and girls a combination of head and hand work is desirable."

Vocational Institute.—The report describes the aims and purposes of the New Brunswick Vocational Institute, recently organized on a permanent basis. It was pointed out that the Vocational Institute presents distinctive features. As the name implies, its membership is open to all who are interested in vocational work, thereby enabling the organization to secure the counsel of many not actively engaged in teaching, and so more completely to fulfil its first object—the advancement of the educational interests of the Province and Dominion. In this respect it parallels the practice of the engineering profession in granting associate memberships, and follows the lead of the American Vocational Association.

By a definite program of professional improvement, including annual conventions, library service and pooled information, it hopes to raise professional status and prestige.

Its specific objects in this respect are set forth as follows:

"To secure the professional and intellectual improvement of the teacher.

"To unite vocational teachers of New Brunswick; to extend to them advice, assistance and protection in professional matters; and to seek for them a fitting degree of economic security."

At a conference of United States industrial and labour leaders, convened on April 20, by United States Secretary of Labor, Frances Perkins, it was agreed to consider collective bargaining contracts "sacred and binding."

This meeting was the first of a series of conferences of representatives of Government, management and labour to establish a formula under the National Labor Relations Act for avoiding strikes and lockouts.

OLD AGE PENSIONS IN CANADA

Financial and Statistical Summary of Old Age Pensions as at March 31, 1937

The accompanying table gives particulars of operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, Chapter 156; as amended by Statutes of 1931, Chapter 42), and under the various provincial concurrent acts, as at March 31, 1937. (The text of the Old Age Pensions Act was given in the Labour Gazette for April, 1927, page 375).

The Act made provision for the establishment of a Dominion-provincial pension system to be effective in such provinces as might enact and give effect to special legislation for this purpose. With the recent entry of New Brunswick and Quebec into the system, all the provinces are now participating and the scheme is completely national in scope.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and upwards who is not in receipt of an income of as much as $365 a year and who has resided in Canada for the 20 years preceding, and has also resided in the province in which the application is made for the five years immediately preceding the granting of the pension. The maximum amount of pension payable under the Act is $240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to a reduction by the amount, if any, that their private income exceeds $125 a year.

Under the provisions of the Act as it was first passed the Department of Labour of Canada (then the administrating Department) paid quarterly to each province one-half of the total amount of the pensions paid by the provincial pension authority during the preceding three months. At the 1931 session of the Dominion Parliament, however, the Act was amended, the amount of the Dominion contribution being increased from fifty to seventy-five per cent of the total expenditure.

In order to avoid duplication of departmental activities and to secure centralization of responsibility in carrying out the provisions of the Act, which involves accounting control and supervision, the administration of the Old Age Pensions Act was by Order in Council dated March 1, 1935, transferred to the Department of Finance from April 1, 1935. Accordingly the following table has been prepared in the Department of Finance.

FINANCIAL AND STATISTICAL SUMMARY OF OLD AGE PENSIONS IN CANADA AS AT MARCH 31st, 1937

—	Alberta Act effective Aug. 1, 1929	British Columbia Act effective Sept. 1, 1927	Manitoba Act effective Sept. 1, 1928	New Brunswick Act effective July 1, 1936	Nova Scotia Act effective March 1, 1934	Ontario Act effective Nov. 1, 1929
Total number of pensioners	9,100	10,824	11,559	9,803	13,456	55,950
Average monthly pension	18 13	19 29	18 64	13 39	14 49	18 19

* Percentages based on estimated population as at June 1, 1936—Dominion Bureau of Statistics.
† Represents Federal Government's share of pension payments from Aug. 1, 1936, to March 31, 1937.

ANNUAL CENSUS OF MANUFACTURING AND CERTAIN OTHER INDUSTRIES IN CANADA, 1935

Statistics Respecting Employees, Wages, Etc.

THE Dominion Bureau of Statistics, under the Statistics Act of 1918, takes annually by mail an industrial census covering statistics of fisheries, mines, railways, etc., and general manufacturing in Canada. Preliminary figures for all manufacturing industries for the year 1935 have been issued, and the accompanying tables give the figures in some detail.

The first table contains summary figures for all manufacturing industries for 1930 and from 1932 to 1935, numbers of establishments, capital invested, employees on salaries and wages and value of production. The figures show increases from 1934 to 1935 in all the items except number of establishments and amount of capital invested, which show slight decreases. The figures for the other items show a continuation of the improvement which began in most cases in 1934 following declines from 1930. The upward movement in the cost of materials which began in 1933 continued in 1935, there having been substantial increases in the prices of raw materials as well as in the amounts of raw materials used by manufacturing industries. The decrease in total wages paid each year from 1929 to 1933 would be due in part to short time operations, prevailing in nearly all industries during this period, followed by increase in 1934 and 1935.

The second table shows the number of employees on salaries and on wages with salaries and wages paid as well as the number of establishments, for 1935, by provinces and by groups of industries and for each of the important industries in each group.

Statistics for 1934 appeared in the issue of the LABOUR GAZETTE for April, 1936, pp. 334-336. The issue for September, 1935, pp. 823-825, contained figures as to the numbers of wage-earners classified according to the regular hours of work per week, 40 or less, 44, etc., up to 60 and over 60. Similar information for 1934 and 1935 will be available for publication in a future issue.

The third table gives the figures as to numbers of employees and salaries and wages paid in in other industries for which figures are collected annually. It will be noted that the number of employees has increased in 1935 in all industries except fishing and electric railways. The aggregate amount of salaries and wages in each industry for which this information is available has increased.

Figures from the Decennial Census of 1931, Bulletin XXXI, showing numbers of gainfully employed persons in all industries were given in the LABOUR GAZETTE, for August, 1933, pp. 819-821 also figures from Bulletin XXXIII, as to numbers of wage earners, weeks employed and average earnings, were given in the LABOUR GAZETTE, for November, 1933, pp. 1094-1095.

TABLE I.—MANUFACTURING INDUSTRIES IN CANADA, PRINCIPAL STATISTICS, 1930 AND 1932 TO 1935

Items	1930	1932	1933	1934	1935	Change per cent in 1935 over 1934

Wages and salaries $	8,430,292	8,132,525	7,375,492	6,399,435	5,759,047	5,621,807	6,071,962

(a) Excluding Electric Light and Power, which is given separately below.
(b) Including about half of the express employees which are also shown under Express, below.
(c) Not including operators paid on commission.
(d) Full time employees only.
*The figures for mining, etc., include non-ferrous smelting and refining, clay products, cement, lime and stone (monumental and ornamental) which are shown as sub-groups under manufacturing.

WAGES OF EMPLOYEES ON FARMS IN CANADA, 1929, AND 1934 TO 1936

THE Dominion Bureau of Statistics secures each year from its agricultural correspondents throughout Canada information as to the wages of employees on farms in Canada during the year just ended. The figures so secured are published in the *Monthly Bulletin of Agricultural Statistics* for the February of the following year. Tables of these figures have appeared in the reports on Wages and Hours of Labour in Canada issued as supplements to the LABOUR GAZETTE for January, 1925 to 1937, inclusive, the first of these giving figures back to 1914. The accompanying table includes figures taken from the issue of the *Bulletin* for February, 1937, and from previous issues.

WAGES IN AGRICULTURE, 1929, 1934, 1935 AND 1936

AVERAGE WAGES OF FARM HELP IN CANADA AS ESTIMATED BY CROP CORRESPONDENTS OF THE DOMINION BUREAU OF STATISTICS

REPORT OF COMMISSION INVESTIGATING WORKMEN'S COMPENSATION IN NOVA SCOTIA

THE Commission appointed on November 19, 1936 (LABOUR GAZETTE, December, 1936, page 1100), to investigate the provisions and operations of the Nova Scotia Workmen's Compensation Act, has recently made its report and recommendations.

During the course of this investigation three hundred and eighty-five witnesses were heard and briefs were submitted by prominent labour, professional and industrial organizations. In addition, the Chairman of the Commission investigated the Workmen's Compensation Boards at Toronto and Quebec, and the Accident Prevention Association for the Province of Quebec at Montreal.

The Commission reported that "due to a misunderstanding, or an ignorance of what workmen's compensation is, and was meant to be, there has grown up in the province a misconception of the Act, instead of being compensation for injured workmen, it is a system of unemployment insurance." It was also stated that "employees were refused compensation and had their compensation greatly reduced, or cut off entirely, without a full and complete explanation, and in many cases no explanation having been given them." The Commission referred to the fact that a complete consolidation has not been made of the Act which came into force on January 1, 1917, and suggested that the most important features of the Act should be outlined in a comprehensive pamphlet "which could be read and appreciated by employers and employees."

Increased Compensation Recommended

The Commission (among other recommendations) suggested that the Act be amended (Subsection 4 of Section 38) by substituting sixty-six and two-thirds per cent of $1,500 for the death of a workman through accident instead of the present sixty per cent of $1,200. It was also suggested that section 38 be further amended in such a way as to provide that where a workman leaves no widow (or the widow subsequently dies) the person taking care of the children should be entitled to receive the same monthly payments of compensation for herself and the children as if she were the widow of the deceased.

The repeal of sections 42, 43 and 44 of the Act is recommended by the Commission, and the substitution of a new section which would provide that where permanent total disability results from injury, the amount of compensation should be a weekly payment during the life of the workman equal to sixty-six and two-thirds per cent of his average weekly earnings during the twelve months previous to the accident. It was further recommended that compensation for permanent partial disability should be raised to sixty-six and two-thirds per cent of the difference between the average weekly earnings of the workman before the accident and the average amount which he is earning, or is able to earn afterwards. The Commission suggested that "the amount of compensation to which an injured workman shall be entitled for temporary or permanent total disability shall not be less than eight dollars ($8) per week, or where his average earnings are less than eight dollars per week, the amount of such earnings, and for temporary partial or permanent partial disability, a corresponding amount in proportion to the impairment of earning capacity."

Medical Aid

It was recommended that sections dealing with medical aid to injured workmen be amended by providing that fees for such service "shall not be more than would be properly and reasonably charged to the workman if himself paying the bill." The Board would be allowed to "authorize such medical and surgical aid, hospital and skilled nursing services as may be necessary as a result of the injury, for a further period as may be necessary, where in the opinion of the Board such services are beneficial to the workman and would tend to conserve the accident fund." Travelling allowances for attending physicians should be reduced from 75 cents to 50 cents per mile to bring such allowance into conformity with those in other provinces.

The Commission was "particularly impressed with unsatisfactory types of (artificial) limbs supplied to injured workmen" and that such artificial limbs were "ill-fitting, clumsy and heavy, they are certainly not up to the standard that modern manufacturers produce." It was recommended that a policy of industrial as well as clinical rating be adopted by the Board.

The Commission also suggested several amendments to the section of the Act dealing with the "Notice of Accident."

Referring to assessments the Commission stated that "probably thirty per cent of the payrolls of the employers" in the lumber industry "are not reported and consequently they escape payment of that proportion of their assessments." The Commission further stated that "The Board cannot escape some responsibility by not having investigators who should travel the province during the whole year."

The Commission suggested that where wholesale and retail dealers (who are not covered by the Act) engage in work similar to an employer who is under the Act that such wholesaler or retailer should be brought within the terms of the Act.

Representations were made regarding the advisability of an appeal tribunal, the Commission decided "that the considered opinion of the workmen is that they are opposed to appeal on all questions of law and of fact and we therefore suggest that section 34 of the Act as amended, be repealed." The Commission expressed the opinion that the Board should act as a reviewing tribunal from the decisions of its own medical officers.

Lumbering Industry

Referring specifically to the lumber industry in the province, the Commission's report states "in view of the fact that the lumbering industry in the past year was compelled to pay seven per cent on its pay-rolls into the funds of the Board and that many protests were received from lumber operators and the Nova Scotia Forest Products' Association, it is necessary for your Commission to give it special attention. We would like to point out that between 1917 and 1936 the total income from the lumbering industry was $2,131,176.89. The accident cost for this same period was $2,327,-569.20, or a loss to the Board of $196,393.31. Of this deficit, $19,844.25 was incurred in 1935 and $74,882.03 in 1936. With the increasing losses and suggested increases in compensation it is obvious that the industry cannot very well bear the added burden. If these losses are to be paid out of assessments levied on that industry, the rate would be raised to a point that the industry could not carry. For these reasons, your Commission suggests that the increases recommended for employees be not made applicable to persons employed in the lumbering industry, except by Order in Council after a careful and complete investigation is made of the whole situation, by a committee representing the lumber operators and the Board. We might point out in this regard that the amount paid in compensation to injured workmen in 1936 (for other than pensions) was $72,301.61. The amount of compensation estimated yet to be paid for 1936 is $92,000, making a total of $168,312.30. During the year 1936 there was paid for medical aid to persons employed in the lumbering industry, $39,781.79 and the amount estimated to complete medical aid for persons injured in that industry for 1936 is $26,552.15, making a total of $66,313.94 for that year.

Financial Position of Funds

In dealing with Accident, Disaster and Pension Funds the Commission reported: "At the beginning of this inquiry we discovered that a great deal of misunderstanding existed both among the employers and employees as to the size and necessity for both the pension and disaster funds, which are derived from the accident fund. As of December 31, 1935, the pension fund consisted of the sum of $5,819,913.87 and the disaster fund of $667,538.96. In a province such as Nova Scotia, where coal mining is one of the principal industries, and we are liable at any time to have a disaster of major proportions, it is the opinion of Your Commission that the disaster fund is not too large. After careful investigation we find that the pension fund is no more than adequate to meet the oustanding claims caused by death and disability, and if the Act were repealed and the Board ceased to function, there would be left in the funds sufficient moneys to pay all the outstanding obligations to injured workmen and dependents of those who have been killed in industry. In proportion to similar funds in other provinces we feel that this amount of money is not disproportionate to the liabilities they carry. We also wish to commend the Board for the high grade of securities contained in these funds."

The Commission also made certain general recommendations concerning improvement in administration, period of disability, courtesy and publication of regulations, etc.

The final recommendation of the Commission was that its suggested amendments to the Act should not be made effective until 1938, because of the fact that the provisional assessments for 1937 are based on the present Act.

National Silicosis Conference

The Division of Labor Standards of the United States Department of Labor has issued a bulletin (No. 13) entitled "National Silicosis Conference" summarizing the reports of four committees appointed by the Secretary of Labor "to investigate and report regarding the industrial disease known as silicosis." These summaries embody the findings of the National Silicosis Conference which first convened in Washington in April, 1936, and which met a second time in February, 1937.

WORKMEN'S COMPENSATION IN NEW BRUNSWICK, MANITOBA AND SASKATCHEWAN

Annual Report of Provincial Boards for 1936

New Brunswick

THE eighteenth annual report of the Workmen's Compensation Board of New Brunswick reviews the administration of the Act during the calendar year 1936. The report also presents an analysis of accidents in 1935 based on complete statistics.

The estimated income shown in the provisional statement for the year 1935 was $560,271.38, while the actual income amounted to $601,478.19, made up from Actual Assessments, Interest on Current Fund, etc.—an increase of $41,206.81 between the Provisional and Actual Income.

The estimated expenditure shown in the statement for 1935 was $678,293.79, whereas the actual expenditure amounted to $641,358.33, or a decrease of $36,935.46 between the provisional and actual expenditure, thereby showing a decrease between the provisional and actual deficit of $78,142.27.

The amounts written off to adjustments and bad debts shown as $1,408.99. The Board found it necessary to write off this amount mainly on account of debtors having left the Province or made assignments and received their discharge in bankruptcy.

The increase in income is attributable to Classes Two, Three, Four and Five, the returns from these classes showing that there had been considerable more employment than the Board had anticipated.

The expenditure for the year did not reach the figures that the Board had predicted, owing to the fact that a number of claims turned out to be more serious than anticipated, which necessitated carrying them over into the succeeding year. The estimated cost of these claims had been placed at $33,854. While the year 1935 is relieved by that amount, it will go to increase the actual cost of 1936.

The estimated deficit in the Provisional Statement for 1935 was shown as $69,561.69. To this must be added the amount of $1,408.99 written off to bad debts and adjustments, leaving a net provisional deficit of $70,970.68. Deducting this from the decrease of $78,142.27 between the provisional and actual debit balances leaving an actual credit balance of $7,171.59.

The total income for the year 1936 is estimated at $658,308.25 and the expenditure at $700,862.78, leaving an estimated deficit of $42,554.53. Deducting from this the surplus of $7,171.59 carried forward from 1935 leaving an estimated deficit of $35,382.94.

Statistics for 1935.—The compensation cost of accidents in 1935 of $586,329.80, shows a further increase over $558,490.38 in 1934 and $527,923.72 in 1933. On the other hand, the total number of accident in 1935 shows a marked decline from 7,858 in 1934 to 7,251 in 1935. Of total accidents in 1935, 26 were fatal an increase of two over the previous year, 3 were permanent total disability cases, 280 permanent partial disability, 5,000 temporary total disability, and 1,942 involved medical ail only. In 1934 there were 358 permanent partial, 5,711 temporary total and 1,765 medical aid only.

During 1935 the average age of workmen involved in accidents was 27·19 years and their average weekly wage was $12.55, compared with an average age of 21·62 years and average wage of $8.78 in 1934. In temporary total disability cases the time loss was 156,179 days and averaged 31·26 days; while permanent partial disability accounted for 25,595 days lost or an average of 99·55 days; and permanent total disability cases lost 344 days, with an average 115 days.

The causes of accidents in 1935 were classified as follows: prime movers, 173; working machines, 356; hoisting apparatus, 194; dangerous substances, 190; stepping on or striking against objects, 668; falling objects, 1,192; handling objects, 891; tools, 1,133; runaways and animals, 78; moving trains, vehicles, etc., 279; falls of persons, 1,382; all other causes, 965.

As a result of fatal accidents in 1935 pension awards to widows numbered 3; pension awards to widows and children, 9; pension award to child, 1; to a mother, 1; limited pension award to a father, 1; and funeral expenses only 10.

Factory Inspection.—The report of the Board also contains the annual report of the factory inspector for the year ending December 31, 1936. During the year 1936 approximately 1,200 visits were made to factories, hotels and industrial plants. During the year, 796 renewal, and 104 new licences were issued for stationary engineers.

Commenting on the upward trend in industrial activity in the province the factory inspector stated: "It is most unfortunate, however, that many employers have not thought it necessary to increase the earnings of their employees, neither have they thought it necessary to increase the number of hands employed with each increase of production. An increase in production, without a corresponding increase in earnings, or in the number employed, profits

only a few. A condition such as this leads to no ultimate good. It is strongly recommended that a Fair Wage Scale be put into effect at once in this Province. It is appalling to note the number of firms who are paying wages so low that if an employee is hurt and receives compensation he is getting nearly 100 per cent more than if he were working full time. The minimum amount paid by the Compensation Board is $6 per week. A firm that cannot pay a living wage should not be allowed to carry on business in this Province."

Manitoba

The numbers of accidents reported to the Workmen's Compensation Board of Manitoba continues to show a marked increase according to statistics contained in the report of that body for the year 1936. In all, 11,050 accidents, including 48 fatalities during 1936 were reported, compared with 9,907 accidents and 28 fatalities in 1935, an increase of 11·5 per cent.

Details showing the accidents as reported by the various industrial groups for the last two years are as follows:—

Group	1935	1936
Steam Railways	1,081	1,358
Province of Manitoba	282	549
City of Winnipeg	331	320
General Body of Employers	7,628	8,177
Winnipeg Electric Company	162	254
Dominion Government	422	392
	9,907	11,050

The report also refers to final returns for the year 1935 which show that 9,895 accidents were reported to the Board as having occurred during that year. Of these accidents 83·2 per cent entailed the payment of compensation, either for medical aid only or for compensation for time loss and medical aid, while in 16·8 per cent of cases no expense was entailed.

On December 31, 1936, the Board had on its books 532 dependents of workmen killed in industry during the period March 1, 1917, to December 31, 1936.

The total actual payroll for all classes of employees for 1935 was $58,108,660.36. Of this total, the returns for the largest group, known as the general body of employers showed a payroll of $30,784,435.

In 1936, the actual cash disbursed by the Board amounted to $931,638.76 as compared with $867,229.50 during 1935.

The report shows that the value of Board Orders passed during 1935 for the payment of compensation, including orders respecting Dominion Government employees and amounts transferred to General Unclassified Reserve to provide for future payments in fatal and permanent disability cases was $845,985.97 as compared with $798,103.38 for the year 1935.

"During the year," the report states, "the Legislature added silicosis, in so far as the foundry industry and mining were concerned, to the list of industrial diseases covered by the Act. At the same time a separate levy and fund were arranged for out of which to pay compensation in such cases. Provision was made for claims which had already accrued, and in all seven claims have been filed.

"These cases are frequently very difficult of diagnosis, especially when the disease is complicated by tuberculosis as is usually the case. However, when systematic clinical and X-ray examination of the workman has been carried on for a few years, and a case history with successive X-ray plates is available for each man, this difficulty of diagnosis should largely disappear. During the past year the Board has put a great deal of thought and work upon this problem and hopes for some success in working it out. We are glad to report helpful co-operation from workmen and employers in dealing with the matter."

The report also contains statistical tables analysing the accidents occurring in 1935, showing the number of compensable accidents in 1935 by classes; time loss per accident and average age and average wage; causes of accidents; month of occurrence of accidents; nature of injuries, etc.

During 1935, the average age of workmen in all classes involved in accidents was 36·03, and their average weekly wage $19.97. In temporary disability cases 91,625 days working time was lost, an average of 24·55 days; in permanent disability cases 34,919 days were lost, an average of 166·28 days. Fatal cases accounted for 201 days time loss, an average of 9·57 days.

The causes of accidents in 1935 were classified as follows: prime movers, 67; working machines, 245; hoisting apparatus, 22; dangerous substances, 177; stepping on or striking against objects, 294; falling objects, 643; handling objects, 1,036; tools, 279; runaways and animals, 58; moving trains, vehicles, etc., 226; falls of persons, 693; all other causes, 3,963.

Saskatchewan

The seventh annual report of the Workmen's Compensation Board of Saskatchewan published recently contains a provisional financial statement for the calendar year 1936 and a final statement for the year 1935. It is pointed out in the report that only a provisional financial statement for the year 1936, can be given by reason of the necessity of adjustments of actual payrolls and outstanding liabilities for 1936 not yet completed.

During 1936, employers reporting to the Board numbered 4,533 as compared with 4,492 in 1935. The amount of payrolls reported, exclusive of the Dominion and Saskatchewan Governments (which are not asked to estimate their payroll but which make a deposit with the Board to cover the cost of accidents) totalled $27,008,607 as compared with $24,551,061 in 1935.

In 1935, the Board collected the sum of $421,152.06 from all employers compared with $400,079.47 collected in 1934. Expenditures for compensation, medical aid, etc., in 1935, amounted to $430,456.71 leaving a deficit of $9,304.65. For the year 1936, the total receipts are estimated to be $427,807.11, with estimated disbursements of $453,825.22 leaving an estimated deficit of $26,018.11.

Claims reported to the Board in 1936 totalled 5,402, an increase of 610 over 1935. The number of fatal accidents in 1936 was 14, there being a similar number of fatalities in 1935. The sum of $179,930.92 was set aside to meet future payments for permanent disabilities and death claims. The number of pensions being paid at December 31, 1936, was 190 as compared with 157 a year ago. The report states that the disaster reserve has not been added to during the year and stands at $111,872.67.

The average age of all classes of workmen involved in lost time accidents during 1935 was 35·12 years and the average weekly wage of these workmen was $16.76. Temporary disability cases accounted for 43,843 days time loss, an average of 25·81 days; permanent disability cases accounted for 4,403 days lost time or an average of 84·67 days. Death cases accounted for 10 days of lost time or an average of 5 days.

The causes of accidents in 1935 were classified as follows: prime movers, 65; working machines, 216; hoisting apparatus, 14; dangerous substances, 150; stepping on or striking against objects, 577; falling objects, 643; handling objects, 322; tools, 247; runaways and animals, 56; moving trains, vehicles, etc., 122; falls of persons, 551; all other causes, 634, a total of 3,597 for the year 1935.

During 1936 the number of accidents reported totalled 3,997, of which 14 proved fatal, 46 involved permanent disability, 2,280 temporary disability, while 1,657 required medical aid only.

Unemployment Insurance in New York State

In the LABOUR GAZETTE for November, 1936, page 981, and December, page 1101, reference was made to the unemployment insurance legislation of New York State. This measure has been amended recently.

The new Act eliminates the former differentiation between manual and non-manual workers and makes all workers in establishments where four or more persons are employed eligible to benefits if they receive less than $3,000 a year. The previous limitation was $2,600 a year for non-manual workers, with no limitation for manual workers.

The measure also lifts the minimum benefits from $5 a week to $7 and makes time worked, instead of wages earned, the basis for computation of benefits.

Unemployment Compensation in U.S.A.

By May 1, 1937, 45 States, the District of Columbia, and Alaska had enacted unemployment compensation laws and all the laws except those of Nebraska, Delaware and Alaska had been approved by the Social Security Board. The Alaska law is now under consideration by the Board, and the Nebraska and Delaware laws will probably be submitted shortly. The latest available estimates indicate that 18,520,000 workers are employed in jobs covered by the 44 approved laws.

From February, 1936, to May 1, 1937, the States with approved laws had received Federal grants totalling $8,688,357.52 to pay all necessary costs for the proper administration of their laws.

By April 15, the State deposits in the unemployment trust fund in the United States Treasury, plus accrued interest, amounted to $219,803,451.77. This represented deposits by 33 States and the District of Columbia.

The *Manitoba Gazette* of May 1, 1937, contains the revised regulations of the Taxicab Board under "The Taxicab Act." The regulations cover rules of practice, operating conditions, drivers' wages, taximeters, tariffs of fares, distinguishing markings, insurance, "drive-yourself vehicles" and "drive-yourself" booking office.

On April 29, the five-day week was inaugurated in the composing rooms of three Toronto daily newspapers. Approximately 400 printers are affected by the new schedule and means employment for about 60 more printers.

New regulations (effective April 1, 1937) under the Boilers Act, 1929 and The Factories Act, 1926, have been issued by the Department of Public Works, Alberta, according to the Alberta *Gazette*, of April 15, 1937.

MINIMUM WAGES IN QUEBEC AND BRITISH COLUMBIA

Recent Orders Issued by Provincial Boards

RECENT Minimum Wage Orders issued by the Minimum Wage Board in Quebec and by the Board of Industrial Relations of British Columbia establish weekly rates for the printing trades and the seasonal canning industry in the former province, and for the barbering trade and summer resort hotels in the latter.

The provisions of these provincial Orders are given herewith:—

Quebec

The *Quebec Official Gazette*, April 17, contains the text of two minimum wage Orders published by the Minimum Wage Board of that province, viz. governing employment in the printing, book-binding and lithographing industry; and in the seasonal canning industry.

The former replaces two Orders that have been in effect since March 1, 1928 (Labour Gazette, November, 1927, page 1174 and January, 1928, page 30); while the latter is an entirely new Order.

Order No. 3.—*Governing female employees and males when replacing females in printing, book-binding, lithographing and envelope making establishments.*

This Order, effective from June 14, 1937, replaces Orders No. 3 and 4 which have been in effect since January 1, and March 1, 1928, respectively (Labour Gazette, November, 1927, page 1174 and January, 1928, page 30).

Since this new Order establishes an entirely different wage basis than the Orders it replaces, and since it now applies to males when replacing females, the provisions are set forth in detail:—

1. *Minimum:* The minimum wages stipulated below shall apply to all establishments covered by this Order. The territorial jurisdiction for the purpose of the present Order, shall be:—

Zone 1.—City and Island of Montreal—and a radius of fifty (50) miles, in a straight line, from the boundaries of the Island:—

Beginners, not less than 15 cents per hour.
After 6 months' experience, not less than 18 cents per hour.
After 12 months' experience, not less than 22 cents per hour.
After 18 months' experience, not less than 24 cents per hour.
After 24 months' experience, not less than 26 cents per hour.

Zone 2.—The Province of Quebec—excepting Zone 1:—

Beginners; not less than 13 cents per hour.
After 6 months' experience, not less than 15 cents per hour.
After 12 months' experience, not less than 18 cents per hour.
After 18 months' experience, not less than 20 cents per hour.
After 24 months' experience, not less than 22 cents per hour.

(Whenever a female employee does a class of work, which ordinarily and by custom is executed by men, she then shall be paid not less than the scale of wages recognized and set forth, for such class or work, by a collective labour agreement, in all establishments governed by said collective labour agreement.)

2. *Experience of employees:* The time of experience of an employee shall be counted upon the working hours she has actually worked, based upon a working week of 48 hours, fifty (50) weeks constituting one year; therefore, 1,200 hours of work means six months of experience, 2,400 hours one year; 3,600 hours, eighteen months and 4,800 two years experience at the trade.

3. *Maximum of apprentices:* The number of apprentices shall not exceed one-third of the total number of female employees. Any person having less than 24 months' experience at the trade shall be considered as an apprentice.

4. *How wages must be paid:* The employee's wages shall be paid to her wholly in cash; no deduction being permitted for any cause or purpose whatsoever. Said wages shall be given to her in a sealed envelope on which shall be written: her name, her register number, the date of the week or of the fortnight she has worked, the number of hours she has performed, the rate per hour, the amount of money enclosed in the envelope; same must be initialed by the person who pays the employee. The wages are payable weekly, but in exceptional cases, where it is the custom, they may be paid fortnightly, but not later. Employees are advised to keep their pay-envelopes so they could be used, as proof, whenever necessary.

(*a*) All employees—manual and non-manual —are covered by this Order, no matter what occupation they fill or the work they perform. The system of periodical changes from piece rates to hourly rates, or vice-versa, for same operation, is prohibited as such changes permit an illegal reduction of wages; the piece rates shall be uniform for all employees performing same operation.

5. *Deduction:* No deduction shall be made for work that has been spoilt. No deduction below the minimum wage for absence shall exceed the value of the time lost, based on the wage of the employee.

6. *Duration of labour:* 48 hours shall constitute a regular week's work. All work in excess of the above period of 48 hours per week shall be considered as overtime and shall be paid for at the rate of time and a half. After having left the employer's premises, any employee who may be recalled to do regular or overtime work, shall receive an amount equivalent to at least two hours' work.

7. *Time and a half, double time and holidays:* Notwithstanding the provisions of the preceding paragraph, whenever a Collective Labour Agreement provides for a distribution

of working hours, either for day or night shifts, or overtime, and also regulations for the observance of certain holidays, providing for time and a half or double time, said distribution of working hours and regulations shall be binding for all employers governed by said collective labour agreement, the same as if they were provided for by this Order; failure to comply with same shall render them liable to the penalties prescribed for any other violation of this Order, as long as the Collective Labour Agreement is in force.

8. *Waiting time:* Any employee required to wait on the premises shall be paid for the time thus spent.

9. *Exemption:* The Board may grant permits of variation or suspension of any of these regulations to meet exceptional conditions, it may also issue permits for lower wages on behalf of aged or handicapped workers.

10. *Discharge of employees:* No employer shall discharge or threaten to discharge or in any way discriminate against any employee, because such employee has lodged a complaint with the Board or has testified or is about to testify in any investigation or proceedings permitted or prescribed by or taken under the provisions of this Act. All complaints are strictly confidential.

ORDER No. 26.—*Factories Canning, Packing and Evaporating Fruits and Vegetables Which Operate Seasonally.*

This Order covers establishments which operate but from June 15th to October 15th. All other canning factories of fruits and vegetables come automatically under Order No. 14, group 1. (LABOUR GAZETTE, May, 1936, page 419.)

For the object of this Order, and by virtue of Section 6*a* of the Women's Minimum Wage Act (Chap. 100, R.S.P.Q. 1925), it is decreed that all manipulations of the product from the time of its reception, are considered as female labour; therefore, employees of both sexes are subject to the regulations set forth by this Order.

1.—*Minimum Wage:* No employee shall be paid a minimum wage inferior 12½ cents per hour.

2.—*Mode of Payments:* The employee's wages shall be paid to her wholly in cash; no deduction being permitted for any cause or purpose whatsoever. Said wages shall be given to her in a sealed envelope on which shall be written: her name, the date of the week or of the fortnight she has worked, the number of hours she has performed, the rate per hour, the amount of money enclosed in the envelope; same must be initialed by the person who paid the employee. The wages are payable weekly, but in exceptional cases, where it is the custom, they may be paid fortnightly, but not later. Employees are advised to keep their pay envelopes so they could be used, as proof, whenever necessary.

3.—*Piecework:* The piece rate shall be uniform for all employees performing same operation. At least ⅔ of the employees working on piece, shall be paid the minimum wage above mentioned.

4.—*Waiting Time:* Any employee required to wait on the premises shall be paid for the time thus spent. At least, two (2) hours wages shall be paid for each call.

5.—*Lodging:* Lodging shall not be charged in excess of a rate of $1 per week, no board in excess of a rate of $3 per week (meals and lodging); nor single meals in excess of a rate of 10 cents per meal.

The usual provisions as regards posting of Orders, penalties and enforcement, etc., are included in both Orders.

British Columbia

The British Columbia Board of Industrial Relations has recently issued two minimum wage orders—one under the Male Minimum Wage Act governing the barbering trade, and the other under the Female Minimum Wage Act relating to employment in resort hotels during the summer.

ORDER No. 42,—*establishing a minimum wage in the occupation of barbering.*

This Order, effective from June 14, rescinds Order No. 8 (LABOUR GAZETTE, August, 1934, page 752). The major change is in the increase in the minimum wage from $15 to $18 for a week of forty hours. There is also a graded hourly scale for those whose week consists of less than forty hours.

The text of the Order is as follows:—

1. That where used in this Order the expression "barbering" includes the work of male persons engaged in the shaving of the face or cutting or trimming or singeing of the hair or beard for hire, gain, or hope of reward, or in connection with any of the foregoing the shampooing or massaging or the treating the head or face.

2. That this Order shall not apply to male persons employed in beauty-parlours or hairdressing shops while working on women or children only.

3. That, subject to the exemptions granted from time to time under section 6 of the said "Male Minimum Wage Act," the minimum wage for every employee in the occupation of barbering whose week consists of forty (40) hours or more shall be the sum of eighteen dollars ($18) per week.

4. That, subject to the exemptions granted from time to time under section 6 of the said "Male Minimum Wage Act," the minimum wage for every employee in the occupation of barbering whose week consists of less than forty (40) hours shall be the sum of forty-five cents (45c.) per hour: Provided, however, that the minimum wage for any such employee in any one day shall be not less than the sum of one dollar and eighty cents ($1.80).

ORDER No. 30A,—*relating to the public housekeeping occupation in resort hotels during the summer season.*

This new Order is in effect from June 15 to September 15, 1937, inclusive. Its provisions are as follows:—

1. That where used in this Order the following expressions shall have the following meanings respectively:—

(a) "Public Housekeeping Occupation" includes the work of waitresses, attendants, housekeepers, cooks, and kitchen-help in restaurants, hotels, tea-rooms, ice-cream parlours, light-lunch stands, and other places where food is cooked, prepared, and served for which a charge is made; and the work of chambermaids in hotels, lodging-houses, and apartments where lodging is furnished, whether or not such establishments are operated independently or in connection with any other business;

(b) "Resort hotel" means any establishment situated outside the boundaries of any municipality, or any village municipality incorporated under the "Village Municipalties Act";

(c) "Summer season" means and includes that part of the year from the 15th day of June to the 15th day of September, both dates inclusive.

2. That no employee in a resort hotel employed in the public housekeeping occupation shall work or be on duty during the summer season for more than ten (10) hours in any one day, nor for more than fifty-four (54) hours in any one week.

3. That every employee in resort hotels in the public housekeeping occupation who is employed for a greater number of hours than forty-eight (48) in any one week during the summer season shall be paid at the rate of not less than time and one-half for such excess time according to the legal rate to which she is entitled under the provisions of Order No. 30 of the Board, dated the 26th day of September, 1935, establishing a minimum wage in the public housekeeping occupation.

4. That said Order No. 30 of the Board, dated the 26th day of September, 1935, is hereby varied accordingly.

Order No. 30, to which reference was made in the preceding paragraphs, was summarized in the Labour Gazette for November, 1935, page 1009. It fixed the minimum wage for experienced employees over eighteen years of age in the public housekeeping occupation at $14 per week of 40 hours or more with an hourly rate of 37½ cents for a week of less than 40 hours.

For employees under eighteen years of age and inexperienced workers over eighteen years, the minimum rate was $12 per week of 40 hours, with an hourly rate of 30 cents for a week of less than 40 hours.

When lodging is furnished not more than $3 a week may be deducted and when board or meals (21 in a week) are furnished, not more than $5.25 may be deducted weekly.

REVISED EMPLOYEES' RETIREMENT PLAN OF THE GOODYEAR TIRE AND RUBBER COMPANY OF CANADA

ON October 1, 1929, the Board of Directors of the Goodyear Tire and Rubber Company of Canada, Limited, announced the adoption of a pension plan, (Labour Gazette, November, 1929, page 1222) for employees of the Company, the purpose of which was to provide and assist employees in providing a substantial annuity for old age. Recently, in adopting a revised plan (effective February 1, 1937) the company states that "experience under our own and other plans has definitely indicated that certain changes were desirable and necessary if the retirement benefits to employees were to be increased."

The general principles underlying the Revised plan are:—

1. To give an opportunity to the employees to provide themselves with a larger and more adequate retirement annuity than was possible under the Old Plan and to make such provision on the best possible terms with the Company's co-operation.

2. To adopt the revision on such terms that any annuities provided for service prior to February 1, 1937, either by the Company's or employee's contribution would not be adversely affected.

3. To continue to deal with past as well as future service.

4. To continue to insure the Plan with the Insurance Company so that every employee placed upon the Pension Roll will have a guaranteed income for the rest of his life.

The booklet issued by the company states that "It will be observed that the Revised Plan has a number of distinct advantages over the Old Plan, chief among which is that the Company's contributions for annuities will not cease at the end of 20 years' service, as in the case under the Old Plan, but will be continued after that time for every year of service until the employee's normal retirement date or actual retirement if earlier, assuming that, in the meantime, the employee is a contributor to the Plan." It is also stated that the company is increasing its contribution in the provision of retirement annuities for its employees.

Administration.—The administration of the revised plan is to be carried out by the Pension Board established under the former scheme. The Pension Board consists of five officers or employees of the Company appointed from time to time by, and responsible to, the Board of Directors.

Eligibility.—All present regular employees of the Company are eligible to join the revised plan if they had completed at least one

year of continuous service on February 1, 1937 and are not over age 65 if males, and age 60 if females. Other present regular permanent employees and new regular permanent employees will be eligible to join the Revised Plan on completion of one year of continuous service provided they have not passed their 65th birthday if a male or their 60th birthday if a female. All employees who completed 20 years of continuous service in any year prior to 1937 and received a paid up retirement annuity certificate would not have been entitled to any further retirement annuity under the old scheme; however, such employees are now eligible to contribute and receive further retirement annuity credits under the revised plan.

Provision is also made in the revised plan whereby the company will purchase at its expense a retirement annuity for the period from the date of an employees' completion of 20 years continuous service up to February 1, 1937, or to their normal retirement date. This particular retirement annuity is in addition to any, which employees might become entitled to after February 1, 1937, by joining the revised plan.

Retirement annuities are payable on the date an employee retires and subsequent monthly payments will be made as long as the employee lives. Provision is made for the retirement before his normal retirement date, of any employee, who in the opinion of the Pension Board has become incapable of continuing in active service. Such an employee will rceive a reduced scale of pension. In the case of an employee who is retained in the company after his normal retirement date he may be retired at any time thereafter, but no pension will be payable until actual retirement and then it will be paid at the same annual rate as if he had retired on his normal retirement date.

Classification of Employees.—Under the old plan, employees were divided into classes:—A "non-depositors" or "non-contributors" and B—"depositors" or "contributors." Under the revised plan no classification of employees is made, as retirement annuity benefits for service after February 1, 1937, are only provided for contributors to the scheme.

Contributions.—Contributing employees are divided into approximately nine groups according to annual rate of earnings. Employees with annual earnings of $1,100 and under, contribute $2 monthly, and their monthly rate of retirement annuity will be computed at $1 for each completed year as a contributor in that wage class. Thus a contributing employee who remained in this particular salary group for 30 years would receive $30 a month retirement annuity. Similarly employees in the salary group $4,500 to $5,100 contribute $12 a month and receive $6 a month for each completed year as a contributor in that particular class. Therefore it will be seen that in computing an employee's pension the various salary groups he has been in during his service with the company has to be taken into account. Without taking into consideration the annuities already purchased under the old plan, the amount of annual retirement annuity provided under this revised scheme will be about 1½ per cent of the total earnings of the employee for all years of service after February 1, 1937 to his or her normal retirement date. The company is paying the balance of the net cost of the retirement annuities outlined above. Contributions are to be deducted by the Company from employees' regular earnings and turned over to the insurance company administering the plan.

The revised plan also provides for such circumstances as lay-offs, death of contributor, termination of service, options, assignments of benefits, etc. The total and permanent disability insurance provided under the old plan, except for those employees who are now receiving payments on that account are discontinued under the revised scheme. Individual cases of employees becoming disabled after 15 or more years of continuous service are to be considered by the Pension Board and will be treated independently of the new plan on a discretionary basis by the Company.

The *Consumers Guide* of April 5, 1937, gives the following statistics regarding Federal credit unions in the United States as at September 30, 1936: Number of credit unions, 1,674; number of members, 252,176; paid-in capital, $6,448,815; number of loans made to members, 201,768; value of loans (2 years), $12,992,880; loans outstanding, September 30, 1936, $5,511,398; transferred to reserves (for bad loans), $85,134; losses charged off, $1,070.

By a majority of 132 to 15, the New York State Assembly passed the Moffat Bill, prohibiting the sale of child labour products in that State. This measure was drafted to conform with provisions contained in a Bill introduced at Washington by Senator Wheeler to regulate the inter-state transportation of merchandise manufactured wholly or in part by child labour subsequent to January 1, 1938.

Special regulations governing hairdressing schools and barber schools in British Columbia were published recently in the *British Columbia Gazette*. These establish the hours for students, the course of study, the rates to be charged for materials, health and safety provisions, and the fees, etc.

IMMIGRATION TO CANADA DURING THE FISCAL YEAR ENDED MARCH 31, 1937

According to a statement issued recently by the Department of Mines and Natural Resources, immigration to Canada during the fiscal year ended March 31, 1937, totalled 12,023, an increase of 8·3 per cent over the number arriving in the preceding fiscal year. Of this number, 5,113 migrants came from the United States, 2,264 from British ports, and 4,646 from other ocean ports. The figures also show that there was a 10·5 per cent increase over the corresponding period a year ago in the numbers coming from the British Isles; a slight decrease in those from the United States; a 31·0 per cent increase in migrants from Northern European countries; while "other races" increased 15·6 per cent.

The following table indicates the occupations of the immigrants:—

Occupation	Via Ocean Ports	From U.S.A.	Totals
Farming Class—			
Males	523	312	835
Females	335	154	489
Children	591	166	757
Labouring Class—			
Males	151	130	281
Females	18	39	57
Children	33	38	71
Mechanics—			
Males	184	239	423
Females	68	112	180
Children	47	74	121
Trading Class—			
Males	198	379	577
Females	70	175	245
Children	45	118	163
Mining Class—			
Males	13	19	32
Females	5	6	11
Children	4	.....	4
Female Domestic Servants—			
18 years and over	440	61	501
Under 18 years	79	.....	79
Other Classes—			
Males	283	420	703
Females	1,922	1,576	3,498
Children	1,901	1,095	2,996

Ontario was stated to be the destination of 5,140 of these new arrivals, 2,033 went to Quebec, 1,007 to Manitoba, 1,373 to British Columbia, 923 to Alberta, 525 to Saskatchewan, 683 to Nova Scotia, 260 to New Brunswick, 71 to Prince Edward Island, 3 to Yukon Territory and 5 to the Northwest Territories.

Eight-Hour Day for Graduate Nurses

On April 29, the Governors of the Hamilton General Hospital approved of the adoption, for a six months' trial period, of the compulsory eight-hour day for graduate nurses attending cases in the hospital. The plan was inaugurated at the request of the Registered Nurses' Association and upon recommendation of the Superintendent of the hospital will provide additional employment without increasing the charge to patients.

Under the previous arrangement two nurses served twelve hours each and were paid $5 each, plus $1 each to cover the cost of meals, or a total of $12 for the twenty-four hour service. In future, three nurses, on shifts of eight hours each will complete the twenty-four hour schedule, receiving $3.50 each, or $10.50 in all, and the remaining $1.50 will go to the institution to pay for meals.

Summarizing changes in purchasing power from 1929 to 1936, an article in the April issue of the Labor Information Bulletin published by the United States Bureau of Labor Statistics, states that "the trends of industrial production, of factory employment and pay rolls, and of farm income indicate that during the period from 1932 through 1936 there has been a considerable increase in the purchasing power of wage earners and farmers, and no doubt also in the purchasing power of the nation as a whole. This gain, however, was reduced in part by increases in wholesale and retail prices during the same period.

Old Age Benefits in U.S.A.

As of May 1, 1937, a total of 27,051,976 social security account numbers under the Federal old-age benefits program which went into effect with the beginning of this year had been assigned to individual applicants who have thus taken the first step toward building up credits for benefits when they reach age 65.

The Social Security Board has opened 123 field offices to bring the administration of this part of the act as close as possible to those who will benefit from it. Additional offices will be opened from time to time as the need arises.

RESTORATION OF COMPULSORY ARBITRATION IN NEW ZEALAND

Summary of Report by E. J. Riches, International Labour Office

THE history of industrial arbitration in New Zealand dates from the Industrial Conciliation and Arbitration Act of 1894. From that year until 1932 the legislation provided compulsory arbitration of disputes between employers and registered trade unions which the parties were unable to settle by agreement and which could not be settled by conciliation under the Act. From 1932 until the amending measure of June, 1936, a system of practically free collective bargaining was in effect. Now the Industrial Conciliation and Arbitration Amendment Act of June 8, 1936, not only restores the compulsory powers possessed by the Arbitration Court from 1894 to 1932, but requires the Court in addition to fix basic rates of wages applicable to all workers covered by awards and agreements, makes trade union membership compulsory for such members, and provides for the application where practicable of the forty-hour, five-day week. (New Zealand's experience with compulsory arbitration has been outlined from time to time in the LABOUR GAZETTE, an extensive review appearing in the issue of March, 1928, pages 279-280).

The following paragraphs on the latest developments in arbitration procedure in New Zealand have been extracted from a report by Mr. E. J. Riches, of the International Labour Office:

After four years' experience of free collective bargaining, New Zealand has returned to the system of compulsory arbitration of industrial disputes. From March, 1932, to May, 1936 the jurisdiction of the Arbitration Court was limited to disputes in which women workers were involved and disputes referred to it by the almost unanimous consent of the parties concerned. The submission of disputes to Conciliation Councils was still compulsory, but with the exceptions noted, if conciliation failed, no outside authority could intervene. By the Industrial Conciliation and Arbitration Amendment of June 8, 1936, the obligation to submit to Conciliation Councils all disputes between registered organizations of employers and workers is maintained, but if no agreement is reached, the Arbitration Court must determine the points at issue. In addition, the Court is charged with new and heavy responsibilities, and important changes have been made in the rules governing the scope of its awards and the organizations under its jurisdiction. . . .

Provisions of New Law

The main provisions of the Industrial Conciliation and Arbitration Amendment Act, 1936, are concerned with the fixing of a basic wage, the scope and membership of trade unions, the powers of the Arbitration Court and the forty-hour week. In the following paragraphs these provisions and certain others worthy of note are summarized.

Under the provisions relating to basic rates of wages the Arbitration Court is required to fix by general order within three months a basic rate for adult male workers employed in any industry to which any award or industrial agreement relates and a separate basic rate for adult female workers so employed. The basic rate for male workers must be sufficient to enable a man to maintain a wife and three children "in a fair and reasonable standard of comfort." In fixing the basic rates, which may be amended at intervals of not less than six months, the Court shall have regard to the general economic and financial conditions affecting trade and industry in New Zealand and to the cost of living. Whatever rates may have been fixed in awards or agreements, no adult male or female worker, unless in possession of a permit issued by the Court, in any industry covered by an award or agreement, may receive less than the current basic rates. . . .

Registration of Unions

Provision is made for the registration of a New Zealand Union (i.e. a national union) covering the whole of any industry or related industries throughout the Dominion in cases where the society applying for registration has branches with not less than a specified membership (3 employers or 15 workers) in at least four of the industrial districts (at present eight in number) into which the country is divided. Where registered local unions are already in existence in the industry or industries concerned no society may be registered as a New Zealand union unless either all the existing unions or a majority of their members are in favour of such registration. On the registration of a New Zealand union the registration of every existing union will be cancelled unless the Minister of Labour, having satisfied himself that a majority of the members of any union desire that its registration be continued, decides to that effect. When a New Zealand union has

been registered no new union may be registered for the same industry or industries unless not less than two-thirds of all employers or workers in the area to which the application relates are members of a society applying for registration. Provisions similar to those for New Zealand unions are made for unions covering any two or more industrial districts.

Compulsory Membership

A further section of the Act requires all workers who are subject to any award or industrial agreement to be members of a union. Every award or agreement made after the passing of the Act must contain a provision making it unlawul to employ in the industry concerned any adult who is not a member of an industrial union bound by it or of a trade union registered before May 1, 1936, and similarly bound. For the purpose of this provision the term adult includes any person of 18 years or over or in receipt of the minimum rate of wages prescribed for adult workers by any award or agreement. No union, unless its maximum membership is fixed by the Court and is already reached, may refuse to accept as a member any person obliged by this provision to become a member. Any person debarred by this provision from membership of a limited union may be employed if no member of the union is available and willing to perform the particular work to be done. Any other non-unionist may be continued in employment during such time as no member of a union bound by the relevant award or agreement is available and willing to do the work in question.

Union subscriptions are the subject of a provision limiting them to 1s. per week except in cases where a higher rate is fixed by a union meeting of which written notice, stating that one of the purposes of the meeting is to raise subscriptions above that rate, is given at least seven days in advance to every member. Another provision authorizes the Court to include in any award a clause empowering a representative of any industrial union of workers to enter at all reasonable times upon the premises of any employer bound by the award, and there to interview any workers, but not so as to interfere unreasonably with the employer's business.

Jurisdiction of Court

The third main subject dealt with by the recent Act is the jurisdiction of the Arbitration Court. It restores to the Court the jurisdiction in relation to industrial disputes which it had prior to the 1932 amendment, and provides in particular that if no settlement or recommendation is made by a Conciliation Council the dispute in question shall be referred to the Court for settlement. The definition of "industrial matters" is extended to include all matters affecting the privileges, rights and duties of industrial unions or associations and their officers. Section 23 authorizes the Court to extend an award so as to join and bind as party thereto any (and not merely any specified) trade union, industrial union or association, or employer in the same industry; repeals the proviso limiting this power to awards relating to a trade or manufacture the products of which enter into competition with those manufactured in another industrial district and in which a majority of the employers and unions of workers are bound by the award; and limits the proviso to a provision that the Court shall not extend an award to cover any employer unless a majority of the employers in the district who are engaged in the industry to which it relates are already bound by it. . . . . .

Forty Hour Week

Hours of work form the subject of sections 20 to 22 of the Act, which direct the Court to fix maximum hours (exclusive of overtime) at not more than 40 per week unless in the opinion of the Court it would be impracticable to carry on efficiently any industry to which the award relates if hours were so limited; empower it to amend existing awards or industrial agreements so as to fix miximum hours at 40, or if that is considered impracticable at a figure intermediate between 40 and the previous maximum; and direct it to endeavour to fix working hours when the maximum is not more than 40 per week in such a way that no part of the working period falls on a Saturday. No award fixing hours at 40 or less shall take effect before September 1, 1936. Where an existing award or agreement is amended so as to reduce maximum hours of work "any rates of pay fixed in the award or agreement shall, if necessary, be increased, either directly by the Court or indirectly by the operation of the order, so that the ordinary rate of weekly wages of any worker bound by the award of agreement shall not be reduced by reason of the reduction made in the number of his working hours."

The Act contains, finally, certain provisions relating to administration and enforcement, one of which confers on Inspectors of Awards the power to recover arrears of wages on behalf of a worker subject to an award or industrial agreement. . . . .

New Wage Basis

Precedents for the basic wage provisions are to be found in Australian practice and in experience during the early post-war years in New Zealand. In Australia, the Commonwealth Arbitration Court and various state wage tribunals have for many years fixed a basic or living wage for the unskilled worker, adjusting its level from time to time in accordance with variations in the cost of living. Such adjustments take effect at once either generally or through a provision in awards making the basic rate subject to periodical revision according to changes in the cost of living. The Commonwealth Arbitration Court and, to a large extent, the State Courts and Boards, have followed closely the standard first set in 1907 in the famous Harvester judgment. In this case the living wage was fixed by Mr. Justice Higgins, on the basis of "the normal needs of the average employee, regarded as a human being living in a civilized community" and maintained a "household of about five persons."

The practice of the New Zealand Court has varied at different times. When first established it fixed a "fair wage" based on what was already being paid elsewhere for similar work. In 1907 it introduced the principle of the "living wage," but without attempting to define the content or the method of calculation of the living wage. The basis adopted was apparently the Victorian Harvester standard. From then on, as the cost of living rose, the Court raised its basic wage in sympathy, and by 1918 it had adopted the policy of pegging the minimum wage for unskilled labour to an average standard of living, as ascertained by a Department of Labour enquiry in 1909-1913, with an allowance for changes in retail prices. . . . . (The writer then details the system of basic wage rates and supplementary bonuses which subsequently prevailed.)

Size of Family

The basic wage provisions in the Act recently passed thus represent in some respects a return to a method already tried. It is, however, the first time that the Court has been specifically directed to fix "basic rates" applicable to all workers covered by awards and agreements, and to fix such rates for women as well as men; and it is the first time that the law has specified the size of family (man, wife and three children) which the Court is to take into account in fixing wages. . . . .

Preference to Unonists

The original Industrial Conciliation and Arbitration Act of 1894 bore the sub-title "An Act for the Encouragement of Trade Unions," and its framer attached considerable importance to this aim. In the 1936 amendment a similar intention is evident. It is the policy of the Government to have working conditions fixed by negotiation between organized workers and employers and it is considered reasonable to require all workers to bear their share of the cost and responsibility of giving effect to this policy. Preference to unionists, which the Court formerly could but did not invariably choose to grant, is made compulsory. Previously the Court's usual preference clause required the dismissal of a non-unionist only if the union was able to provide in his place a worker who was "equally qualified . . . . . and ready and willing" to perform the work. The employer was *prima facie* the judge of whether a worker was "equally qualified." Now a non-unionist may be employed only if no member of a union is "available . . . . ready and willing." Moreover the customary preferency clause limited union subscriptions to not more than 1s. (usually 6d.) per week. In future the amount of the subscription is to be determined by the union alone, according to a prescribed procedure. As a result of these changes both the membership and the financial strength of the unions will, it is expected, be greatly increased. Of scarcely less importance is the provision for registration of New Zealand unions (i.e. unions covering the whole of the country). . . . . .

Exemptions From 40-Hour Limit

Under the new law, the onus of proving that it would be impracticable to carry on efficiently any industry if hours were limited to 40 lies with the employers concerned; and the final decision rests with the Arbitration Court. The Court may not, however, extend hours beyond 44 per week in the case of any workers for whom that maximum is prescribed in the Factories Amendment Act, 1936, or the Shops and Offices Amendment Act, 1936. The Minister of Labour, in introducing the Bill, recognized that there were "perhaps a few industries" in which it would be difficult to apply the 40-hour week, but expressed the opinion that "in most industries the principle can and should be applied. . . . Wherever practicable, the Court must concede the forty-hour week." The general intention of the legislature is thus clear, but as the Act contains no definition of the terms "impracticable" and "efficiently," the responsibility placed on the Court is a heavy one. The Court must decide, for example, whether only technical factors are to be taken into account in assessing impracticability, or whether other factors, and in particular financial difficulties, should be considered; if the latter what degree of financial hardship would render the conduct of a business impracticable.

Relation of Hours to Wages

In adjusting wage rates to reduced hours of work, some discretion is also left to the Court. The Act provides that where the hours fixed in existing awards are reduced to 40 per week, the weekly wage rates must be maintained. No corresponding direction is given to the Court in respect of new awards instituting a 40-hour week. There are, however, corresponding sections in the Factories Amendment Act, 1936, and the Shops and Offices Amendment Act, 1936, which became law at the same time as the Industrial Conciliation and Arbitration Amendment Act, providing that the wages of factory, shop and office workers are not to be reduced on account of the changes in working hours, including a reduction to 40 per week in factories and 44 in shops, made by those Acts. (In concluding his comprehensive review the writer deals with the working of the new law.)

"SHARING PROFITS WITH EMPLOYEES"

Study of Plans by Metropolitan Life Insurance Company

A BULLETIN entitled "Sharing Profits with Employees" has been issued recently by the Canadian Headquarters of the Metropolitan Life Insurance Company. It is explained that owing to a revival of interest in the subject, the Policyholders Service Bureau of this Company has investigated recent trends and has summarized its investigations in the present report. (From time to time the LABOUR GAZETTE has published reviews on this subject as well as outlining outstanding plans in Canada and the United States.)

Profit Sharing Defined

In defining profit sharing, it is pointed out that it has been in existence for a long time and that there is still little agreement as to what it really is. "Some executives" the report states, "use the term loosely to include various bonuses based on length of service or the elimination of waste, cash distributions at Christmas time and plans for the purchase of company stock by employees on favourable terms,—in fact almost any direct or indirect form of compensation in addition to wages. Their contention is that supplementary payments generally come from profits and thus are a form of profit sharing.

"Other executives think of the term in a more restricted sense. They accept the definition of the International Congress on Profit Sharing held in Paris in 1889 which limits it to a 'voluntary agreement, by virtue of which an employee receives a share, fixed beforehand, in the profits.' In other words, they believe that there is a relationship between the profits of an undertaking and the amount to be distributed, that the relationship is made known in advance to the employees, and that there is an agreement, either expressed or implied, that employees will receive their share of the profits."

From this definition, it was inferred that "any distribution at the discretion of the board or directors after the amount of profits is known would be a bonus and not true profit sharing. Similarly, plans by which employees purchase company stock on favourable terms are not considered as profit sharing insofar as the dividends are the same as those received by other stockholders."

But certain types of stock purchase plans, however, provide for the payment of extra dividends to employee stockholders, and such plans are included within the scope of the survey.

Purpose and Theory of Profit Sharing

The study indicated that there was also differing interpretations as to the purposes of profit sharing. Some of the earliest plans, it is pointed out, were developed out of humanitarian motives to raise the standard of living, and to provide old age and sickness benefits for employees. Growing out of labour disputes, a number of plans were designed to prevent frequent disputes over wage adjustments by providing a form of compensation that fluctuated with prosperity and depression. Another theory advanced in support of profit sharing is that business is prosperous when labour has adequate purchasing power. It was considered, however, that the basic theory of most plans was their economic justification in promoting greater efficiency and a sense of mutuality of interest in the success of the enterprise. In discussing the theory of profit sharing, the bulletin observes:

"It has been said that profits often are beyond the control of capital, management, and labour due to industry-wide or nation-wide conditions. Hence, why should not management and labour share in profits rising from factors outside the control of any of the parties at interest? The contention that labour does not share in the losses is met by the answer that labour does suffer serious losses through wage reduction and unemployment. Some plans appear to accept this theory in that normal wages are paid to labour and a fixed interest paid to capital depending upon the risk involved before any of the profits are shared.

"As against this theory some authorities have pointed out that if the risk of capital could be determined and insured against, there would be no reason for capital to receive more than pure interest. In practice, however, the risk of capital cannot be determined accurately nor can it be insured. Furthermore, many marginal producers do not operate at a profit and the extent of profit sharing is thus definitely limited."

An extension of profit sharing was also noted in plans including employee representation.

Early Plans

The bulletin then dealt with the history of profit sharing commencing with the pioneering efforts in France during the nineteenth century of Leclaire and Godin. The early plans of prominent British employers included those of Henry Briggs, Son and Company; the Metropolitan Gas Company; J. T. and J. Taylor Limited; Lever Brothers Limited; and Armstrong, Whiteworth and Company, Limited. In the United States the earlier plans outlined were those of the N. O. Nelson Manufacturing Company of St. Louis, and the Procter and Gamble Company. (In an Appendix typical American plans also included those of the Eastman Kodak Company, and the Package Machinery Company.)

Analysis of Plans

An analysis is made of various plans respecting eligibility, service requirements, amount to be distributed, industrial relations, basis of distribution, form and time of distribution, and special provisions (such as temporary lay-off, disability, retirement, forfeitures, etc.).

Conclusions

In its conclusion, the bulletin states that though many types of profit sharing plans have been in operation during the past century, the majority have not survived. This did not "necessarily imply that discontinued plans were not successful in accomplishing this purpose because the mortality of business concerns is high over a long period of years." It is further explained that a fair appraisal of profit sharing is difficult "in view of the various purposes and motives of the founders, the many types of plans, the differences in local conditions, and the personalities of the founders."

The views expressed in the study are summarized in the following paragraphs:

"It is generally recognized that profit sharing is not a panacea for industrial ills; it is rather a part of an Industrial Relations Program. If adopted, it should be fitted into the general program. Profit sharing, for example, is not considered compatible with a low wage scale, and some authorities point out that the current rate of wages should not be made to fluctuate automatically with profits. This school of thought is of the opinion that profit sharing should be entirely independent of the wage setting process. Thus they believe it is possible for profit sharing and collective bargaining to exist side by side.

"Similarly, it is maintained that the profit sharing program should be fitted into and not conflict with a company's program for employee security—disability, unemployment, retirement, and death benefits. The cost of these provisions today is likely to be treated as operating expense and thus may affect the percentage of profit allotted to employees.

"The idea of profit sharing usually implies the power and responsibility for controlling profits. Particularly in the co-partnership type of plan, this normally leads to giving employees a voice in management through works councils or otherwise. Many authorities believe that employees should be given information on costs—especially those items of expense over which they may have some control. Employees cannot think as partners, they believe, unless they understand the fundamental, economic facts regarding the business.

"Profit sharing has proved to be limited in its application to the rank and file of employees. Most companies earn on the average only a small rate on their capital, and relatively few show large profits. While some companies may have adopted profit sharing for humanitarian reasons, most concerns appear to have considered the economic justification of such a plan. It is usual to ask; what opportunities are there for reducing costs through the elimination of waste in time, labour, and materials? Can the amount of supervision be reduced by making employees partners and arousing an interest on their part in the success of the company?

"As an incentive, profit sharing has proved of value in proportion to the ability of participants to control profits. The amount each individual receives should offer him an inducement commensurate with his efforts, and a large proportion of the employees should participate. The amount of profits earned in the past and the relative stability of profits are factors to consider in setting the rate of profit sharing for a normal year. It is contended that nothing discourages employees' interest in a profit sharing plan more than a series of years during which no profits are earned.

"Most authorities agree that individual employees have no inherent right to profits but that profit sharing may be expedient as good management practice. Good management recognizes the value of good employee relations based on mutual respect and understanding, on a desire to further the interest of both, and on the security, well-being and development of individual employees. Profit sharing has sometimes been found applicable in such a program."

SURVEY OF WORLD SOCIAL ECONOMIC SITUATION

Annual Report of Director of International Labour Office

IN his annual report to the 23rd International Labour Conference, commencing on June 3, at Geneva, Mr. Harold Butler, Director of the International Labour Office, gives a comprehensive survey of the social and economic situation throughout the world.

"A year ago," he says at the beginning of his report, "everyone was asking himself whether the signs of better times then clearly apparent were real or illusory, whether the full tide of recovery was actually flowing or whether there was just a lull in the depression. To-day there can be no doubt that a large measure of recovery has been actually accomplished....

"But although great progress has been made in the last twelve months, no one feels sure that stability or equilibrium has really been attained....

"The economic machine again in motion after a serious breakdown is once more moving forward with gathering speed, but the distance that it may be expected to travel remains a matter of anxious speculation."

In fact, in a whole series of countries, production has already surpassed the 1929 level. In others there has been a marked improvement. Unemployment, however, has not declined to the extent which the recovery of production might be expected to indicate; but its decrease is nevertheless important and almost universal. In some countries, the number of persons at work at the end of 1936 was greater than in 1929 before the depression. The estimated volume of international exchanges of goods slightly increased since 1935, but it remained from 10 to 15 per cent less than in 1929; which goes to prove that most of the measures taken to revive prosperity have been of an internal character. They have increased production mainly for domestic use, and, it is pointed out, have not been able to abolish exchange restrictions, reduce trade barriers and get the current of external trade again flowing actively.

Social Security and Monetary Policy

Recently, however, a very important turn for the better has taken place owing to the tripartite Monetary Agreement of last September, between the United States, Great Britain and France.

"At length international co-operation in the economic field has been initiated," reports Mr. Butler.

"If the depression has shown one thing more clearly than anything else it is that economic prosperity and social security depend more on monetary policy than on any other single factor."

Moreover, the policy aimed at lowering trade barriers carried out by the United States and the efforts of several other countries in the same direction "are the first pieces of flotsam showing that the tide has turned after ebbing for six years steadily towards autarchy and economic nationalism.'

Factors in Recovery

Other signs of recovery are: the rise in the prices of the principal foodstuffs and raw materials; the improvement which has taken place in the great agricultural countries; the increase in shipping activity; and the rapid recovery of shipbuilding.

The Director points out that there are abnormal factors "which overshadow this cheerful picture," the most important of which is "the growth of armaments and the uneconomic activity which it represents." He notes that it is unquestionable that the arms stimulant has contributed substantially to increase production and employment, but armaments at any time represent some deduction from the national well-being. Mr. Butler then continues:

"The money spent for armaments means money withdrawn from private enterprise; the labour employed for purposes of destruction means labour withdrawn from productive purposes; the raw materials used create a dearth for industries working to increase the national wealth....

"The armaments race is then an element of weakness in the process of recovery, but it is also the symptom of a greater weakness. The general unrest indicated by the open preparations for war in Europe and in the Far East constitutes a formidable dam in the path of the stream of prosperity, which is now beginning to flow once more. As long as the fear of war is as widely prevalent as in the latter months of 1936, it is vain to expect that the world can attain its full economic momentum....

"All the financial, commercial and social measures, by which the great crisis of the past five years is being overcome, are nothing but vanity if the whole political and economic fabric of our present-day civilization is under the constant menace of disruption by another international conflict."

Lessons of the Depression

Nevertheless, he observes, the measures taken, and the results achieved, should give

humanity confidence in itself. For there can be no doubt that recovery has been mainly achieved by the positive action of Governments and people rather than by any process of automatic readjustment. Among the lessons of the depression, this is one on which Mr. Butler places special emphasis. "The pace and the precipitousness of these economic movements is not entirely a dictate of nature beyond the control and direction of human agencies."

"The discovery that after all man is capable of asserting some control of his economic destiny is all the more timely and important, because present-day communities are no longer content to accept the buffets of economic misfortune with the same docility as in the past. ...

"The events of the last fifteen years have radically altered the aims and methods of social policy. Instead of being ancillary to economics, it now occupies the foremost place in the eyes of statesmanship. No State, whatever its ideological complexion or its political structure, affects to ignore the claims of the great mass of its citizens to a certain standard of life and a certain security of employment. Both are now regarded as almost statutory rights, which it is the duty of Government to ensure. The strength of every administration tends to be mainly judged by its success in curtailing unemployment and in restoring the incomes of the farmer and the manufacturer to a profitable level. The condemnation of failure is now apt to be all the more severe, because a series of national experiments has demonstrated the possibility of combating the effects of depression with marked success."

Effects on Wages and Hours

Mr. Butler shows how the experience of the depression has revolutionized many traditional ideas, particularly in regard to unemployment, unemployment assistance, unemployment insurance, etc. He considers that the whole conception of social insurance has emerged strengthened and confirmed by the ordeal.

As regards the question of wages viewed in the light of recent years, Mr. Butler states:

"In the matter of wage-policy the slump has also produced important and in some respects unexpected lessons. In former times there was a common belief amounting almost to a dogma that the most effective method of combating depression lay in the reduction of wages. It was argued that, when the consumer was no longer willing or able to buy at prevailing prices, the manufacturer had no choice but to cut down costs until his prices were so reduced as to tempt the consumer back into the market. As the largest cost item under the manufacturer's immediate control was wages, a cut in wage-rates was looked upon as the most obvious and the most ready expedient for achieving the desired result."

After analyzing charts of wage rates in various countries, the Director considers that "if a really international test is applied over a number of countries, the only possible conclusion is that the amount paid per hour to the worker is no more than one among a great many factors which go to determine the general level of a nation's economic activity, and by no means the decisive factor."

He also draws attention to the fact that "the depression has led to increasing recognition of the value of the minimum wage," and he indicates the remedial action taken in various countries.

The movements in favour of reduction of hours of work, holidays with pay, workers' leisure, etc., far from being retarded by the difficulties of these past years, have been accelerated.

"Generally speaking, so far from the normal working week having been lengthened, a powerful movement has sprung up during the depression in the direction of shortening it. ...

"The movement towards a 40-hour week is no longer solely or even perhaps mainly inspired by the necessities of the unemployment situation. It is now rather advocated on broader grounds of social policy. ...

"Failing an international agreement, it is not improbable that countries which have already adopted the new régime will be tempted, if not compelled, to defend it by the imposition of tariffs, quotas or other barriers to international trade against competing countries which are still working longer hours. The erection of trade barriers on social grounds would be a particularly serious matter at a time when a reaction is setting in against restrictions on international trade."

Trend of Social Policy

The Director of the I.L.O. deals with the chief characteristics of current problems and tendencies. Social policy to-day, as the result of the lessons of the depression, appears in an entirely new perspective.

He studies the extension of Government interference into the economic field, which is bound to remain a permanent feature of the new order.

He shows that the traditional method of deflation had failed to arrest the catastrophic decline of trade, production, prices and employment, which began in 1929. Confronted

by this situation, Governments deliberately turned to expansionist measures, that is to say, they sought to increase the quantity of cash and credit in circulation, and encouraging results have been seen everywhere.

Mr. Butler also analyses the causes and effects of the drive for greater self-sufficiency, which is almost everywhere apparent.

"Agricultural countries are developing industries, while industrial countries are fostering agriculture. Though this tendency has been greatly accelerated by the slump, it is further encouraged by the nationalistic spirit, which is perhaps the most fateful legacy of the war. When agricultural countries found their exports barred by tariffs and quotas, or saleable only at pitiable prices, it was natural enough that they should try to make for themselves the goods which they could no longer afford to buy abroad. When the industrial countries found their manufactures confronted by the inability of the agricultural countries to purchase them or by fresh barriers raised to protect home industries, it was natural enough that they should encourage their own farmers".

With regard to the problem of raw materials, he states that its colonial aspect has been exaggerated, and its essential dependence on the proper functioning of world economy overestimated.

Rise of Prices

But the question which is causing the most anxiety in the economic field is that of the rise of prices.

"A rise in prices is a natural and healthy sign to be found in the early stages of economic recovery. As long as it is accompanied by a corresponding increase in production, it does not afford any ground for apprehension. At the present time prices, whether wholesale or retail, are in most countries still well below the 1929 level. Though as may be seen from the diagrams on pages 70-71 there is a wide variety of experience in different countries, it can hardly be maintained that the present position for the world as a whole is in any sense dangerous. On the other hand, if the upward price-movement got out of hand, the cost of living might begin to soar with excessive rapidity. An upward spiral might be inaugurated with costs, wages and prices outbidding each other in such a way as once more to threaten the stability of the economic structure. To prevent such a movement must always be a major aim of economic policy".

Here again the Director contends, national effort, however necessary and effective, cannot attain its maximum efficiency unless integrated in an international system functioning harmoniously to achieve agreed objectives.

Attempts at Social Reconstruction

Reviewing the most recent attempts at social reconstruction made throughout the world, the Director of the I.L.O. draws attention to the extent and importance of the French "experiment".

"That this immense program should have been adopted and put into execution in so short a time is an interesting proof that neither the legislative nor the administrative procedures of democracy are incompatible with swift and decisive action when occasion requires."

Mr. Butler also refers to the far-reaching program of reforms carried out in New Zealand.

In reviewing the general impressions of the results achieved in countries of widely-varying political conceptions, he notes "the large degree of similarity between methods adopted by States which differ widely in their political creed."

"The modern technique is more or less universal. Whether it be a question of developing national resources, promoting national industry, controlling output, marketing and prices, regulating credit and currency, adjusting internal indebtedness, redistributing income by the taxation of large incomes and profits, or deflecting the course of international trade and capital, it is impossible to draw any firm distinctions along ideological lines. These practices are the common property of all countries. Frequent examples of all of them may be found under every type of constitution. Neither democratic nor totalitarian nor collectivist societies have any monoply in them.

"But if the methods are similar, there is a fundamental difference in the results achieved, which is determined by the ultimate object in view....

"There is, however, no ultimate conciliation possible between social justice and preparation for war. Economically as well as ethically they are at opposite poles. War preparedness can only be bought by the sacrifice of civilized living to a greater or lesser extent. Social justice is only attainable if the forces of production are harnessed to the causes of peace, without which the general progress of mankind is impossible. Those who co-operate in the attempt to realize the ideals of the International Labour Organization are the avowed servants of peace. Collective security is not merely a political conception, but demands for its realization an economic order, national and international, of which the cornerstone is social justice."

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Safety in the Building Industry

The International Labour Office has just published a Blue Report on Item I of the Agenda of the Twenty-third Session of the International Labour Conference, which is to meet in Geneva in June 1937—Safety Provisions for Workers in the Building Industry with reference to Scaffolding and Hoisting Machinery.

This question was placed on the Agenda of the Twentieth Session of the International Labour Conference by a decision of the Governing Body of the International Labour Office at its Sixty-ninth Session in 1935. At the Twentieth Session of the Conference the question was the subject of a first discussion in accordance with the Standing Orders. The Conference then had before it a preliminary Grey Report, prepared by the Office, which gave a survey of the laws and regulations in force in various countries respecting scaffolding and hoisting machinery used on buildings under construction and also contained a brief statistical study of the number and causes of accidents to building workers, an account of the organization and powers of the building inspection services and some information as to the activity of employers' and workers' organizations in regard to the prevention of accidents. The Report concluded with a list of points on which it was thought Governments might be consulted in preparation for the second discussion, together with the text of a Model Safety Code drawn up in collaboration with the Office by the Correspondence Committee on the Prevention of Accidents.

After consideration of this Report the Conference decided to place the question on the Agenda of its Twenty-third Session and also decided the points on which the Governments should be consulted for the purpose of preparing for the second discussion and final decision to be taken at that Session. On this basis the Office framed a Questionnaire which was addressed to the Governments of the Members of the Organization on 24 July, 1936.

The present Report has been drawn up on the basis of the replies of 25 Governments to this questionnaire. The replies received are reproduced in Chapter I. Chapter II gives a comparative analysis of these replies. In Chapter III will be found the conclusions drawn from the comparative analysis contained in the previous chapter together with the texts of the proposals which the Office, on consideration of the replies, submits to the Conference as a basis for the second discussion of the question.

Reduction of Hours in the Textile Industry

The Office has also issued a Blue Report on Item II of the Agenda of the same Session of the Conference—Reduction of Hours of Work in the Textile Industry.

The question of the reduction of hours of work in the textile industry appears on the Agenda of the Twenty-third Session of the International Labour Conference as a result of a decision taken by the Conference at its Twentieth Session in June, 1936. At that Session the Conference had before it a Grey-Blue Report prepared by the International Labour Office, in accordance with the directions of the Governing Body, in such a form as to enable the Conference either to follow the double-discussion procedure or, if it so desired, to take a final decision on the adoption of a Draft Convention at once. The Conference considered it expedient to follow the usual procedure of double discussion, decided by 71 votes to 29 to place the question on the Agenda of the Session of the Conference to be held in 1937, and directed the Office to frame and address to Governments a Questionnaire the replies to which would provide the basis for a report to be submitted to the Conference for the purpose of the second discussion. Pending this decision by the full Conference, however, the Committee set up by the Conference to consider the question of the reduction of hours of work in the textile industry had proceeded with the consideration of the proposals for a Draft Convention included in the Office's Report, and these proposals as revised by the Committee (referred to as the "draft text of 1936"), together with the discussions of the Committee, furnished the basis on which the Office framed the Questionnaire addressed to the Governments.

The replies received from 26 Governments are reproduced in Chapter I of the Report. Chapter II gives a general survey of the replies, and also gives, in relation to the several replies, the draft text of 1936. Chapter III gives the conclusions which the Office has drawn from the additional information available since the discussions at the Conference in 1936 and explains the proposals which it submits to the Twenty-third Session of the Conference as a basis for the second stage of the consideration of the question. The text of these proposals will be found at the end of the volume.

Planning of Public Works and Relation to Employment

The International Labour Office has just published a report on "Planning of Public

Works in Relation to Employment," which question is Item III of the agenda of the Twenty-third Session of the International Labour Conference opening in Geneva in June next.

The question of the planning of public works in relation to employment was placed on the Agenda of this Session of the International Labour Conference in virtue of a decision taken by the Governing Body of the International Labour Office at its Seventy-fourth Session in February, 1936, which in turn was the result of a resolution passed by the Unemployment Committee of the Governing Body. The whole question of public works and unemployment is, however, by no means a new one for the Conference, which referred to it in the *Unemployment Recommendation* adopted at its First Session in 1919 and in resolutions adopted at various times since then. At its Twentieth Session the Conference adopted a resolution noting with satisfaction that the question had been placed on the Agenda of the 1937 Session and asking that a Grey-Blue Report be submitted at that Session in order that it might be possible to reach final decisions in 1937.

The present Report is the result of that resolution. Part I, which contains the material normally included in a Grey Report prepared for a preliminary discussion, sets out the law and practice in the different countries under the headings of national planning and co-ordination of public works, conditions of employment and other provisions regarding labour, public works and the employment of young persons, non-manual workers and women, and international collaboration, and concludes with a list of points suggested as a basis for a questionnaire. Part II, on the analogy of a Blue Report prepared for a final discussion, contains proposals for international regulations in the form of two draft Recommendations and a resolution which the Twenty-third Session can take into consideration in the event of its considering it preferable to proceed to a final decision rather than a preliminary discussion.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD JANUARY TO MARCH, 1937

BUSINESS transacted by the offices of the Employment Service of Canada during the quarter January to March, 1937, showed a gain over that recorded during the corresponding quarter of 1936, as there was an increase of 3 per cent in vacancies offered and of 1 per cent in placements effected. All groups, except farming, mining, construction and trade, reported increases in both instances, the outstanding expansion being in logging, with gains of lesser importance in services, manufacturing and transportation. The most pronounced decline was in construction and maintenance, under which group are listed relief placements on highways, streets and sewers and other projects sponsored by the Dominion and Provincial Governments. A heavy loss was also shown in farming and others of smaller volume in mining and trade. Provincially, Quebec, Manitoba and British Columbia reported additional vacancies and placements, Quebec and British Columbia showing the greatest change, while Ontario, Saskatchewan, Alberta and the Maritimes registered losses in both divisions, Ontario recording the greatest reduction, which took place largely in the construction and maintenance group, where fewer relief placements had been effected.

From the chart on page 563 which accompanies the article on the work of the Employment Offices for the month of March, it will be seen that the curves of vacancies and placements in relation to applications followed a pronounced downward course during the first half of January, with a more moderate decline showing during the latter half of February and of March, while a marked upward trend was recorded the latter half of January, with little change noted during the first half of February and a slight upward tendency again registered during the first half of March. At the close of the quarter, however, the level of the curve of vacancies was a little above and that of placements somewhat below the corresponding levels attained at the end of March, 1936. During the period January to March, 1937, there was a ratio of 49·5 vacancies and 45·7 placements for each 100 applications for employment, as compared with 48·1 vacancies and 45·2 placements during the corresponding quarter a year ago.

The average number of positions offered daily during the quarter under review was 1,090, of applications registered 2,201, and of placements effected 1,005, in contrast with a daily average of 1,031 vacancies, 2,141 applications and 969 placements in regular and casual employment during the first quarter of 1936.

During the three months January to March, 1937, the offices of the Employment Service reported that they had made 78,524 references of persons to positions and had effected a total

of 74,329 placements, of which 52,271 were in regular employment and 22,058 in casual work. Of the placements in regular employment, 38,748 were of men and 13,523 of women, while casual work was found for 13,109 men and 8,949 women. A comparison with the same period of 1936 showed that 73,584 placements were then made, of which 53,684 were in regular employment and 29,900 in casual work. Applications for employment during the period under review were received from 122,721 men and 40,087 women, a total of

162,808 persons, in contrast with the registration of 162,678 during the same period of 1936. Employers notified the Service during the first quarter of 1937 of 80,651 positions, of which 52,725 were for men and 27,926 for women, as compared with 78,303 opportunities for work offered during the corresponding quarter of 1936.

In another section of this issue will be found a report in detail of the transactions of the Employment Offices for the month of March, 1937.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN MARCH, 1937

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on April 1 was 9,987, the employees on their pay-rolls numbering 978,913 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for March was 1,851, having an aggregate membership of 188,047 persons, 12·9 per cent of whom were without employment on April 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 66 offices of the Employment Services of Canada showing the number of applications for work, the existing vacancies and the number of work-people placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

(1) The Employment Situation at the Beginning of April, 1937, as Reported by Employers

Employment at April 1 showed a small, contra-seasonal advance, according to data tabulated in the Dominion Bureau of Statistics from 9,987 establishments whose staffs aggregated 978,913 persons, compared with 976,535 in the preceding month. Statistics furnished by leading employers show that industrial activity at the beginning of April has suffered a between-season's contraction in fifteen of the sixteen preceding years since 1920; this ordinarily results from the release of bushmen following the completion of the season's logging program, before any considerable numbers of workers have been absorbed into the outdoor industries opening up in the spring and early summer. At the date under review, the increase in the number employed in the Dominion as a whole was entirely due to improvement in British Columbia, where the reported additions to staffs more than offset the moderate losses elsewhere indicated.

The crude index (based on the 1926 average as 100) showed a slight gain from 102·8 at March, 1937, to 103·0 at the beginning of April, when it was higher than at April 1 in any other year since 1930. After correction for seasonal trend, the index at the latest date stood at 109·2, compared with 107·8 in the preceding month. The seasonally-adjusted index, though lower than in the first two months of the present year, was higher than in any other month since the autumn of 1930.

The unadjusted indexes at April 1 in the years of the record are as follows: 1937, 103·0; 1936, 97·4; 1935, 93·4; 1934, 91·3; 1933, 76·0; 1932, 87·5; 1931, 99·7; 1930, 107·8; 1929, 110·4; 1928, 102·3; 1927, 97·4; 1926, 92·5; 1925, 88·3; 1924, 90·4; 1923, 88·7; 1922, 81·8 and 1921, 85·1.

The most pronounced contraction at April 1, 1937, was in logging, from which some 17,300 men were laid off, as a season of marked activity drew to a close. Coal-mining and railway construction also reported large reductions of a seasonal character. On the other hand, manufacturing showed improvement, exceeding that indicated at April 1 in any other year of the record; the iron and steel, lumber and textile groups in particular recorded unusually large increases. Additions to staffs were also reported in many other lines of factory employment, in the extraction of metallic ores and of non-metallic minerals (except coal), in building and highway construction and maintenance, services and trade.

For April 1, 1936, statistics had been received from 9,474 firms, whose employees had numbered 918,716, or 14,505 fewer than in the preceding month. Most of this decline had taken place in logging and construction. The index had then stood at 97·4, which was the low point for the year.

Employment by Economic Areas

Employment in Quebec and Ontario declined slightly at April 1, while in the Maritime and Prairie Provinces there were losses on a rather larger scale. In British Columbia, on the other hand, the movement was decidedly favourable, the number of persons added to

payrolls in that province exceeding the number laid off in the other economic areas. The situation in all except the Prairie Provinces was more favourable than at the beginning of April in any year, since 1930; in the Prairies, the index, though fractionally lower than at April 1, 1936, was higher than at that date in the years, 1932-1935.

Maritime Provinces.—There was a small seasonal decrease in employment in the Maritime Provinces; the 685 co-operating employers reduced their payrolls from 76,827 persons at March 1 to 75,922 at the beginning of April. Logging showed a decided seasonal contraction, and activity also declined in transportation and railway construction and maintenance. On the other hand, food, pulp and paper and iron and steel factories and highway and building construction showed improvement, that on the highways being most pronounced. Employment was in greater volume than at the beginning of April, 1936, although a slight advance had then occurred; the index stood at 105·4 at the latest date, compared with 101·8 at April 1 of last year, when statements had been received from 649 firms employing 72,729 persons, compared with 72,582 in the preceding month.

Quebec.—Manufacturing, mining, transportation, building construction and services showed heightened activity in Quebec. The gains in manufacturing were both general and extensive, those in iron and steel and textile factories being greatest. However, the increase in the above-named industries were rather more than offset by the seasonal decline in employment in logging camps, from which over 8,100 men were released. Data were tabulated from 2,385 firms in Quebec, with 284,090 employees, as against 284,853 at March 1. The index, at 102·2 at April 1, 1937, was nearly eleven points higher than at the same date of last year, when the curtailment indicated was on a very much larger scale. The trend has been retrogressive in fifteen of the seventeen Aprils for which information is now available; the losses at the latest date are the smallest yet recorded at this time of year.

At April 1, 1936, statistics had been furnished by 2,239 employers, whose payrolls had aggregated 252,688; this was a reduction of 9,947 from March 1 of last year.

Ontario.—Employment showed a slight contraction in Ontario, where 4,440 employers had reduced their forces by 596 workers since the preceding month, bringing them to 422,657

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

Note.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

at April 1. A much larger loss had been registered by the 4,213 firms making returns for the same date in 1936, when their payrolls had aggregated 397,323. Employment was then at a lower level, the index standing at 103·4, compared with 108·8 at the latest date. The experience since 1920 shows that activity customarily declines in Ontario at the beginning of April, there having been curtailment of operations in thirteen of the sixteen previous years for which data are available; the decrease at the date under review, however, was decidedly smaller than usual.

Manufacturing showed further recovery at the first of April, notably in iron and steel products, while improvement also took place in the textile, pulp and paper, lumber, food, rubber, chemical, clay, glass and stone, electrical apparatus and non-ferrous metal industries; on the other hand, beverage and tobacco works reported a falling-off. In the non-manufacturing groups, mining, transportation, building construction, services and trade indicated increased activity. Logging, however, released large numbers of workers owing to the completion of the season's operations, and highway and railway construction were also quieter.

Prairie Provinces.—As is customary in the early spring, employment in the Prairie Provinces declined at April 1; although the reduction was very much smaller than that noted at the same date in 1936, it exceeded the average loss indicated at the beginning of April in the last sixteen years. The index, at 89·4 at the latest date, was slightly lower than at April 1, 1936, but was higher than at that date in any other year since 1931. Most of the decrease at the beginning of April in the present year was of a seasonal character in coal-mining and logging; however, highway and railway construction and transportation were also slacker. On the other hand, manufacturing reported improvement, particularly in the lumber, pulp and paper and textile divisions, and building, services and trade also afforded some employment. The working forces of the 1,439 co-operating employers aggregated 113,751 persons, compared with 116,170 at March 1. The firms furnishing data at the same date of last year had numbered 1,386, and their employees, 114,732.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

(AVERAGE CALENDAR YEAR 1926=100)

Relative Weight of Employment by Economic Areas as at April 1, 1937	100·0	7·8	29·0	43·2	11·6	8·4

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns at the date under review.

British Columbia.—A substantial advance of a seasonal character was indicated in British Columbia, according to returns tabulated by the Bureau from 1,038 firms with 82,493 employees, or 7,061 more than in their last report. The increase greatly exceeded that noted at April 1 in any other year of the record. The general situation was better than in the early spring of any of the preceding six years. There was marked improvement at the date under review in manufacturing, (especially of lumber products), and in logging and construction; mining, services and trade also showed heightened activity, while transportation was rather slacker. At the beginning of April of last year, the 987 co-operating establishments had reported 81,244 employees, compared with 78,058 in the preceding month. Table 1 gives index numbers by economic areas.

Employment by Cities

Employment increased in each of the eight cities for which separate tabulations are made: Montreal, Quebec, Toronto, Ottawa, Hamilton, Windsor, Winnipeg and Vancouver. The gains in Montreal, Toronto and Hamilton were most noteworthy.

Montreal.—There was a further marked advance in industrial activity in Montreal, according to 1,381 firms who reported 145,545 persons on their payrolls, as compared with 139,334 at March 1. This increase, of a seasonal character, is decidedly larger than that indicated in any other April for which data are available. Improvement had also been noted at the same date of last year, but employment was then in less volume. Manufacturing showed generally heightened activity at April 1, 1937, as compared with the preceding month, textiles and iron and steel, in particular, reporting considerable increases in personnel; transportation and construction also afforded more employment. On the other hand, retail trade was rather quieter. The 1,304 establishments from which returns were received for April 1, 1936, had 132,303 employees, compared with 131,057 in the preceding month.

Quebec.—Manufacturing and services registered moderate gains in Quebec City, while transportation and construction were slacker.

TABLE II.—INDEX NUMBERS OF EMPLOYMENT BY PRINCIPAL CITIES

(AVERAGE CALENDAR YEAR 1926=100)

April 1	96·8	93·3	105·8	101·9	108·2	151·4	91·6	104·4
Relative Weight of Employment by Cities as at April 1, 1937	14·6	1·3	13·4	1·4	3·6	2·1	4·0	3·4

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated city, to the total number of all employees reported in Canada by the firms making returns at the date under review.

There was an increase of 94 in the working forces of the 176 employers making returns, who had 12,459 on their pay-rolls at April 1. A decline had been reported by the 169 firms co-operating at the beginning of April in 1936, whose staffs aggregated 12,181; the index, at 91·7, was then slightly lower than that of 93·3 at the latest date.

Toronto.—Toronto employers reported a further substantial increase which greatly exceeded the average gain indicated at April 1 in the years for which information is on record. Most of the betterment as compared with the preceding month occurred in manufacturing, although transportation, services and retail trade also afforded more employment; within the factory group, the food, pulp and paper, textile, clay, glass and stone, electrical apparatus and iron and steel divisions reported the greatest improvement. Construction showed little general change. The working forces of the 1,519 employers furnishing statistics totalled 131,439 persons, compared with 128,260 in the preceding month. Employment was more active than at the same date of last year, when a smaller advance had been indicated by the 1,437 concerns reporting; their payrolls had included 120,819 men and women. The index at April 1, 1937, stood at 105·8, as compared with 98·7 at the beginning of April in 1936.

Ottawa.—Continued improvement was noted in Ottawa, there being moderate gains in manufacturing, while transportation and trade were also rather busier. An aggregate staff of 13,517 workers was shown by the 199 employers whose statistics were tabulated, and who had 13,235 in their last report. The index, at 101·9, was slightly lower than at the same date of last year, when an increase had also been recorded. Statements had then been compiled from 177 firms with 13,395 employees.

Hamilton.—Manufacturing, especially of iron and steel products, afforded considerably more employment in Hamilton, while other industries showed little general change. Returns were compiled from 290 firms employing 34,880 persons, or 1,428 more than at March 1. The level of employment was higher than at the same date in any of the last five years. For April 1, 1936, 280 establishments had

Relative Weight of ployment by Industries as at April 1, 1937	100·0	57·4	3·9	6·9	2·2	9·8	6·5	2·7	10·6

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated industry, to the total number of all employees reported in Canada by the firms making returns at the date under review.

reported 31,111 employees, a small decline from the preceding month.

Windsor.—There was a large increase in Windsor at April 1. Data were received from 176 firms employing 20,675 men and women, as against 20,041 in the preceding month. Iron and steel plants reported an important share of the additions made to the staffs of the co-operating employers, and construction and trade showed moderate gains. Employment was much more active than at the beginning of April, 1936, when 170 concerns had employed 17,827 persons.

Winnipeg.—Employment again advanced in Winnipeg, where the payrolls of 479 employers furnishing statistics aggregated 39,237 workers, as compared with 38,877 in the preceding month. Manufacturing (especially in the pulp and paper and iron and steel divisions) was more active, while the fluctuations in the other divisions were slight. At April 1, 1936, a large reduction had been noted and the index then was lower, standing at 88·1, compared with 91·6 at the date under review. Information for the former date had been received from 465 firms with 37,793 employees, or 2,615 fewer than at March 1, 1936.

Vancouver.—Improvement occurred in Vancouver, according to 436 firms with a staff of 33,649, as compared with 33,441 in the preceding month. There was a decline in factory employment, and in shipping, but construction, services and trade showed heightened activity. A greater increase had been reported at the beginning of April of last year, but employment in this city generally was then at a lower level. The index, at 104·4 at the latest date, was over four points higher than at April 1, 1936; the 423 establishments then co-operating had reported 32,073 men and women on their paylists.

Index numbers by cities are given in Table 2.

Employment by Industries

Manufacturing.—Further substantial improvement was recorded in manufacturing, the advance greatly exceeding the average increase from March 1 to April 1 in the experience of the years since 1920. The most

Miscellaneous	·6	129·7	124·2	121·5	117·4	107·9	93·7	102·3

pronounced gains at the date under review occurred in iron and steel, but lumber and textiles also showed important advances, which were decidedly above the average for April 1 in the last sixteen years. Food, leather, pulp and paper, chemical, clay, glass and stone, electrical apparatus, non-ferrous metal and some other groups also reported increased activity. On the other hand, declines were indicated in electric light and power and tobacco works, those in the latter being partly seasonal in character. Statements were received from 5,822 manufacturers, employing 561,967 operatives, as compared with 545,494 in the preceding month. The index advanced from 107·6 at the beginning of March to 110·8 at April 1; this was the highest point reached since the summer of 1930.

Since the general increase in factory employment exceeded the average gain at this date in the period, 1921-1936, the seasonally-corrected index also advanced, rising from 109·5 at March 1, to 112·1 at the beginning of April, 1937, when it was higher than at any other date since April 1, 1930.

The following are the unadjusted index numbers in manufacturing at April 1 in the years for which data are available: 1937, 110·8; 1936, 101·1; 1935, 93·9; 1934, 88·1; 1933, 76·0; 1932, 87·3; 1931, 99·7; 1930, 111·3; 929, 116·5; 1928, 106·6; 1927, 101·5; 1926, 96·6; 1925, 91·2; 1924, 93·6; 1923, 92·6; 1922, 84·4 and 1921, 87·3.

A brief review of the situation at April 1, 1936, shows that the 5,606 manufacturers then furnishing data had employed 510,142 workers, an increase of 7,731 in comparison with their March 1, 1936, payrolls. The greatest gains had occurred in iron and steel and textiles.

Animal Products, Edible.—Improvement was noted in dairies, fish canneries and meat-packing establishments. Statements were tabulated from 280 firms employing 23,125 workers, as against 22,734 at the beginning of March. A larger increase had been recorded at April 1, 1936, but activity was then at a lower level.

Leather and Products.—Further gains were shown in the leather group, according to statements from 300 employers whose payrolls aggregated 23,953 at the beginning of April, or 476 more than in the preceding month. No general change had been indicated at April 1 a year ago, when the index of employment was nearly six points lower.

Lumber and Products.—An upward trend was noted in rough and dressed lumber mills and in container, vehicle, furniture and other wood-using factories. There was an increase of 2,902 persons in the lumber group as a whole; statistics were compiled from 847 manufacturers, with 40,857 employees, as compared with 37,955 at March 1, 1937. The gain was larger than that indicated at the beginning of April in other years of the record. The index, at 77·0 at April 1, 1937, was over nine points higher than at the same date of last year.

Plant Products, Edible.—There was an advance in employment in vegetable foods in the period under review, curtailment in fruit and vegetable canneries being more than offset by expansion in other divisions, notably the sugar and syrup and bread and bakery industries. Returns were tabulated from 471 firms whose payrolls aggregated 29,586 persons, as compared with 29,168 at March 1. The index was several points higher than at the beginning of April, 1936, when only a small increase had been noted as compared with the preceding month.

Pulp and Paper Products.—The movement in the pulp and paper group was upward, there being improvement in all divisions, but especially in printing and publishing and paper goods. According to data received from 610 firms in the industry as a whole, they employed 64,382 workers, as compared with 63,318 in their last report. Employment was in greater volume than at April 1, 1936; an increase had then also been indicated.

Rubber Products.—Activity in 53 rubber works slightly advanced, 124 persons being added to their staffs, which totalled 13,011. Improvement had also been shown at the same date last year, when the index was a few points lower.

Textile Products.—There was a further important increase in employment in textiles at the beginning of April, chiefly in garment and personal furnishing, knitting, headwear, cotton and wollen factories. The gain at the date under review considerably exceeded the average noted at April 1 in the sixteen preceding years for which data are available. Statements were compiled from 1,064 manufacturers with 109,853 employees, or 2,537 more than at March 1, 1937. Most of the improvement occurred in Quebec and Ontario. The situation was more favourable than at the corresponding date of last year.

Tobacco, Distilled and Malt Liquors.—Seasonal reductions in employment were recorded in this group, 1,311 persons being released from the working forces of the 185 co-operating establishments, which employed 17,041 workers at the date under review. Most of the decline took place in tobacco factories in Ontario. The index was lower than in the

spring of last year, when similar curtailment had been noted.

Chemicals and Allied Products.—Two hundred and one plants turning out chemicals and allied products reported 12,283 employees, as compared with 11,980 in their last return. The largest gains took place in Ontario. The general advance rather exceeded that indicated at the corresponding date in 1936; employment was then in smaller volume.

Clay, Glass and Stone Products.—There was an increase in the personnel of building material works, 200 of which employed 9,080 persons, as against 8,453 in their last report. Smaller additions to staffs had been made at April 1, 1936, when the index was considerably lower.

Electric Current.—A moderate reduction was shown in this group, in which 96 plants reported 14,059 employees, or 131 fewer than at the beginning of March. There were losses in Quebec and Ontario, with minor gains elsewhere. Employment was not quite so active as at April 1, 1936, the trend having then been favourable.

Electrical Apparatus.—Substantial improvement was noted in electrical appliance factories, according to the 125 co-operating firms, who had 18,377 persons on their payrolls, compared with 17,581 in their last report. No general change had occurred at April 1, 1936, when the index was nearly eighteen points lower.

Iron and Steel Products.—Statistics were received from 869 manufacturers in this group, whose staffs were enlarged by 6,760 workers to 138,824 at the beginning of April. There were gains in practically all branches of the industry, those in the automobile and other vehicle, crude, rolled and forged, machinery and structural iron and steel divisions being most pronounced. Improvement was shown in all except the Prairie Provinces, that in Quebec and Ontario being most noteworthy. Smaller additions to the personnel had been recorded in the same period of last year, but the index number was then over thirteen points lower than at April 1, 1937, when it reached its highest point since the summer of 1930.

Non-ferrous Metal Products.—Returns tabulated from 170 manufacturers in this group showed that they employed 23,740 persons, as against 22,942 at March 1. Most of the increase took place in the smelting and refining division. Geographically, the improvement was chiefly in Ontario and British Columbia. The volume of employment was much greater than at the beginning of April in 1936; the advance then indicated had been similar in size.

Mineral Products.—The trend of employment was upward in these industries at the beginning of April, according to data received from 138 establishments, in which 14,158 persons were employed, or 206 more than in the preceding month. The index of employment in this group was ten points higher than in the corresponding period of last year, when little general change had been shown.

Logging

Continued and larger seasonal losses were reported in logging camps, 366 of which reduced their payrolls from 55,302 workers at March 1 to 37,953 at the date under review; this decline was greater than that indicated, on the average, at April 1 in preceding years of the record, a reaction from the unusually pronounced activity of last season. The most extensive curtailment at the beginning of April was in Quebec and Ontario, although the movement was also downward in the Maritime and Prairie Provinces. In British Columbia, on the other hand, considerable improvement was noted. The seasonal contraction reported at April 1, 1936, had involved the release of a smaller number of workers, but the index number then was many points lower than at the latest date, when it stood at 132·5.

Mining

Coal.—As is customary at the beginning of April, there was a falling-off in employment in coal-mines during the period being reviewed; this occurred chiefly in the Prairie coal-fields. Data were received from 105 operators, whose staffs included 23,757 employees, as against 25,380 in their last report. The index was fractionally lower than in the spring of last year, when smaller declines had been reported.

Metallic Ores.—Returns were received from 216 firms in this group, employing 35,528 workers, or 1,212 more than at the beginning of March. A much less extensive increase had been indicated at the same date in 1936, when the index stood at 237·5, compared with 290·7 at the beginning of April of the present year.

Non-metallic Minerals, other than Coal.—A considerable gain occurred in this group; 80 firms employed 8,133 persons, as compared with 7,645 in the preceding month. A small advance had been recorded by the employers furnishing statistics at April 1 of last year, when activity was at a lower level.

Communications

Information was received from 86 communication companies and branches, employing 21,558 workers, or 148 more than in the preceding month, telephones showing a moderate improvement. Little general change had been

indicated at April 1, 1936; the index was then at 77·7, compared with 81·4 at the latest date.

Transportation

There were slight increases in employment in the street railway and cartage and steam railway divisions, while shipping was rather quieter. Statistics were compiled from 448 employers of 95,526 workers, as compared with 95,582 at March 1. Of the former number, 26,161 persons belonged in the local transportation, 57,822 in the steam railway and 11,543 in the water transportation division. The tendency at April 1 in the last sixteen years has usually been upward, there being, on the average, a small increase at that date; the movement at the beginning of April, 1936, however, had been unfavourable, and the index then was slightly lower than at the last date, when it stood at 79·5.

Construction and Maintenance

Building.—Statements were compiled from 698 building contractors, with 14,848 persons in their employ, or 1,451 more than in their last report. The tendency was upward in all five economic areas. Although a much smaller gain had been indicated at April 1, 1936, the index then was several points higher.

Highway.—Increased employment was noted on highway construction and maintenance; 311 contractors employed 26,202 men, as compared with 25,634 in the preceding month. The Maritime Provinces and British Columbia reported heightened activity, while there were general losses in the other provinces. A reduction from March 1 had been shown at the beginning of April of last year, but the number then engaged in this work was decidedly greater than in the period under review.

Railway.—There was a marked curtailment in employment in the construction departments of the railways in all provinces except British Columbia. Most of the decline was due to the completion of track-clearing operations as the winter drew to a close. The working forces of the 35 co-operating contractors and divisional superintendents aggregated 22,687 men, whereas in the preceding month they had 23,672 employees. The index number was slightly higher than in the spring of 1936, when a much larger decline had been recorded.

Services

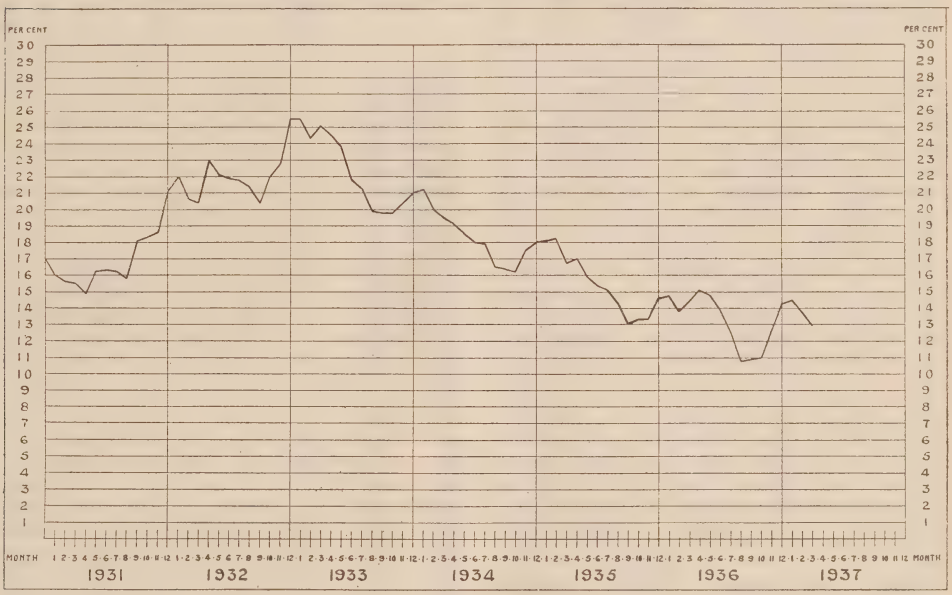
This group showed improvement, according to 472 firms with 26,735 workers, or 828 more than in the preceding month. Laundries and dry-cleaning establishments and hotels and restaurants were decidedly busier. A smaller gain had been reported at the beginning of April, 1936; employment was then in less volume than at the date under review.

Trade

There was a substantial increase in the aggregate forces of the 1,348 co-operating wholesale and retail establishments, which employed 104,019 workers at April 1, as compared with 102,796 at the beginning of March. This advance, which was seasonal, occurred mainly in the retail division, although wholesale trade was also rather more active. A large decline had been indicated at the same date a year ago, when the index of employment was lower, standing at 121·0, compared with 127·5 at the beginning of April, 1937.

Tables

Index numbers of employment by economic areas, leading cities and industries, respectively, are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area, or industry, is of the total number of employees reported in Canada by the firms making returns at the date under review.



(2) Unemployment in Trade Unions at the Close of March, 1937

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons employed at work other than their own trades or who are idle due to illness are not considered as unemployed. Unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

A further slight gain was noted in the volume of work available to local trade union members at the close of March, unemployment standing at 12·9 per cent as compared with a percentage of 13·7 in February. The situation was also more favourable than in March last year when 14·5 per cent of the members reported were out of work. The percentage for the month under review was based on the returns compiled from 1,851 labour organizations with a total of 188,047 members, 24,314 of whom were unemployed on the last day of the month. British Columbia unions showed the greatest improvement

in conditions from February, the various trades and industries in general, contributing their quota to the total provincial advancement. In Quebec, also, more moderate expansion was evident, New Brunswick and Ontario showing but a nominal upward trend. In Alberta, however, noteworthy recessions occurred particularly in the coal mining industry, where slackness, due to lack of orders and in several instances the closing of the mines for the summer months, adversely affected the situation. The tendency in Manitoba and Saskatchewan was also toward lessened employment though the changes were but fractional. From Nova Scotia the same percentage of idleness was reported in both with the exception of Prince Edward Island. Of these, Vancouver unions showed an employment rise during March from the preceding month of nearly 4 per cent, Halifax and Montreal unions recording advancement on a slightly smaller scale. Toronto and Edmonton unions, on the contrary, indicated curtailment in work afforded of over 2 per cent, while in Saint John, Winnipeg and Regina, the tendency was adverse though the changes were less than one per cent. In making a comparison with the returns for March, 1936, Saint John unions showed the most pronounced employment recovery during the month reviewed, and in Vancouver, Edmonton, Winnipeg and Halifax, more moderate

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

months under comparison. All provinces, with the exception of Nova Scotia, reflected heightened activity over March of last year, the gains in British Columbia, as in the previous comparison, being the most pronounced. Improvement of somewhat lesser proportions was noted among New Brunswick, Ontario, Manitoba and Alberta unions, while in Quebec and Saskatchewan conditions were but nominally better. In Nova Scotia employment tended less favourably, the variation from March a year ago, however, being quite slight.

A separate tabulation is made each month of unemployment among local trade union members in the largest city in each province gains occurred. Nominal advancement only was recorded from Montreal and Toronto. In Regina, however, a minor increase in unemployment was recorded.

The chart which accompanies this article shows the trend of unemployment by months from January, 1931, to date. During January this year the level of the curve changed very slightly from the close of 1936 though tending upward in an unfavourable direction. In February, however, the curve extended slightly downward from January, a manifestation of a somewhat increased volume of work, and this better movement was continued throughout March. The point attained by the curve at the close of March, however,

was lower than that of March, 1936, showing that employment was in greater prevalence during the month reviewed.

The 517 unions in the manufacturing industries from which reports were forwarded during March, covering a membership of 63,967 persons, indicated that 7,826 or a percentage of 12·2 were out of work on the last day of the month contrasted with a percentage of 13·6 in February. The majority of trades participated in this slight employment advance from February, general labourers and fur workers showing noteworthy improvement, and leather, glass, iron and steel, and hat, cap and glove workers, gains of somewhat lesser proportions. A more favourable employment tendency was also manifest by brewery and cigar and tobacco workers, printing tradesmen, and pulp, and paper pulp makers, though the changes from February were slight. On the other hand, garment workers, metal polishers and jewellery workers showed moderate recessions in activity, while the curtailment evident among bakers and confectioners and wood workers was almost negligible. Textile and carpet workers were quite actively engaged during March as in February, the unemployment percentage for these two months being identical. The situation in the manufacturing industries remained approximately the same during March as in the corresponding month of last year when 12·1 per cent of the members reported were unemployed, though considerable fluctuation was apparent in the various groups of trades. Wood, and textile and carpet workers were decidedly busier than in March last year, and marked employment advancement was evident among iron and steel workers, bakers and confectioners, cigar and tobacco workers, and printing tradesmen. Lesser gains in activity were noted also, by metal polishers, brewery, jewellery and leather workers. Garment workers, however, sustained severe losses in work available from March a year ago, particularly in the province of Quebec, and distinctly unfavourable conditions prevailed for hat, cap and glove, fur, and glass workers. Among pulp and paper makers and general labourers, the situation declined slightly.

The coal mining industry suffered losses during March chiefly of a seasonal character, the 50 unions making returns with an aggregate of 16,689 members, showing that 2,247 were idle on the last day of the month, a percentage of 13·5, in contrast with an unemployment percentage of 8·0 in February. Little change in conditions was apparent, however, from March, 1936, when 13·9 per cent of the members reported were without work. The Alberta mines were particularly quiet, due to lack of orders and the closing of several mines for the summer months. In Nova Scotia and British Columbia also, there was some falling off in employment. Improvement of moderate degree, however, was reflected in the Alberta mines from March a year ago, and in British Columbia heightened activity on a small scale was noted. Nova Scotia miners, however, reported slight curtailment of employment. Short time work was also rather prevalent throughout the various mining areas during March.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919.....	3·1	2·0	3·4	2·7	2·1	3·2	2·0	7·9	3·4

Dec., 1936.....	6·8	6·2	20·9	13·8	10·9	12·8	6·4	12·7	14·3
Jan. 1937.....	8·2	6·3	22·9	11·9	8·4	11·4	9·1	16·4	14·5
Feb., 1937.....	7·9	5·0	21·3	11·4	9·4	11·5	9·5	14·1	13·7
Mar., 1937.....	7·9	4·2	18·9	10·9	9·6	11·8	14·8	9·4	12·9

In the building and construction trades a higher level of employment was manifest during March than in the preceding month, mainly the result of seasonal revival in building activities. This was apparent from the reports received from 199 local unions involving 18,829 members, 7,356 of whom, or a percentage of 39·1, were unemployed at the end of the month in contrast with 43·0 per cent in February. A general betterment of conditions was evident from March last year, unemployment for that month standing at 44·3 per cent. Granite and stone cutters alone reported an unfavourable situation when compared with February returns, the recessions noted being substantial. Painters, decorators and paper-hangers, steam-shovelmen, and bridge and structural iron workers, on the contrary, were decidedly better employed, and among hod-carriers and building labourers, and plumbers and steam fitters, noteworthy advancement was shown. Carpenters and joiners, bricklayers, masons and plasterers, and tile layers, lathers and roofers, registered more moderate gains, and the situation for electrical workers was nominally improved. Contrasted with the returns for March, 1936, painters, decorators and paper-hangers, plumbers and steam fitters, electrical workers, steam-shovelmen, and bridge and structural iron workers were all much more busily engaged during the month under review, and important gains were registered by bricklayers, masons and plasterers, and hod-carriers and building labourers. Tile layers, lathers and roofers, however, were considerably quieter than in March last year, and among granite and stone cutters, and carpenters and joiners, noteworthy curtailment was evident.

Reports were tabulated at the close of March from 835 organizations in the transportation industries with a total of 61,319 members, 4,617 or 7·5 per cent of whom were idle at the end of the month contrasted with percentages of 8·0 in February and 9·0 in March a year ago. Navigation workers were afforded a much better volume of employment than in February, though some falling off in activity was apparent from March last year. In the steam railway division, which comprised over 80 per cent of the entire group membership reported in the transportation industries, as a whole, a favourable trend was noted from February, but the variation was quite slight, and improvement of somewhat greater magnitude was reflected from March, 1936. Among teamsters and chauffeurs also, activity tended upward both in comparison with February returns and those of March last year. Street and electric railway employees indicated the same percentage of idleness in all three months used for comparative purposes.

Retail shop clerks were fully employed during March as in February, compared with an unemployment percentage of 2·0 in March last year. Reporting for March were 2 unions of these tradesmen with a membership of 795 persons.

Civic employees were more actively engaged during March than in either the preceding month or March, 1936, according to the returns compiled from 79 associations including 8,543 members. Of these, 143 or a percentage of 1·7 were without work at the end of the month contrasted with percentages of 3·2 in February, and 4·0 in March, 1936.

From unions in the miscellaneous group of trades, 132 reports were furnished to the Department during March, embracing an aggregate of 7,117 members, 545 or 7·7 per cent of whom were unemployed on the last day of the month contrasted with percentages of 10·0 in February and 10·4 in March, 1936. Hotel and restaurant employees, stationary engineers and firemen, and unclassified workers all recorded moderate employment advancement from February, and fractional gains were evident among barbers. The trend for theatre and stage employees was toward retarded activity though the change from February was merely nominal. All groups shared in the better employment movement noted from March a year ago, hotel and restaurant employees, and stationary engineers and firemen showing the greatest expansion, while among barbers more moderate gains occurred, and the situation for theatre and stage employees, and unclassified workers tended slightly upward.

Fishermen were decidedly busier during March than in the previous month though some slackening off in employment was reflected from March, 1936. This was apparent from the reports tabulated from 3 associations including a total of 552 members, 9·4 per cent of whom were reported idle at the close of the month in contrast with 39·2 per cent in February and 1·7 per cent in March, 1936.

Little variation in the level of activity was evident among lumber workers and loggers during March from the preceding month though the trend was less favourable, the 2 local unions making returns with 1,165 members showing that 2·7 per cent were out of work compared with a percentage of 2·4 in February. Considerably better conditions prevailed than in March of last year when unemployment stood at 12·1 per cent.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1936 inclusive, and also the percentages of unemployment by provinces for March of each year from 1919 to 1934 inclusive, and for each month from March, 1935, to date. Table II summarizes the returns in the various groups of industries for the same months as Table I.

TABLE II—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Month	Fishing	Lumbering and Logging	Mining	Manufacturing industries	Vegetable products	Pulp and paper products	Pulp and paper mill workers	Printing, publishing and lithographing	Electric current	Wood products	Fibres, textiles and textile products	Textile and carpet workers	Garment workers	Hat, cap and glove workers	Animal products	Iron and its products	Non-ferrous metals	Clay glass and stone products	Mineral products	Miscellaneous manufacturing industries	Building and construction	Transportation	Shipping and stevedoring	Steam railway operation	Local transportation	Communication	Telegraph operation	Telephone operation	Trade (retail shop clerks)	Services	Governmental	Miscellaneous	All occupations

(3) Employment Office Reports for March, 1937

The volume of business transacted by the offices of the Employment Service of Canada during the month of March, 1937, as represented by the average daily placements, showed a decrease of nearly 8 per cent from February, but a gain of almost 5 per cent over March a year ago. In comparison with the preceding month a very heavy loss was recorded in construction and maintenance and a nominal decline in mining, which more than overbalanced the increases registered in all other groups. Industrial divisions reporting the largest gains were services, manufacturing and farming, with smaller additions noted in logging, trade and transportation. When the month under review was compared with March of last year a pronounced increase was recorded in logging, followed by others of lesser volume in manufacturing and services, but this improvement was largely offset by a heavy loss in construction and maintenance, as well as a substantial decline in farming, with smaller reductions in mining and trade.

The accompanying chart shows the trend of employment since January, 1935, as represented by the ratios of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. As may be seen from the graph, the curves of both vacancies and placements in relation to applications fluctuated but little during the month, showing a slight rise during the first half and a nominal decline during the latter half, while at the close of the period under review the curve of vacancies was about 1 point higher and that of placements about 1 point lower than the levels recorded at the end of the corresponding month a year ago. The ratio of vacancies to each 100 applications was 50·0 during the first half and 48·8 during the second half of March, 1937, in contrast with the ratios of 45·5 and 47·9 during the corresponding periods of March, 1936. The ratios of placements of each 100 applications during the periods under review were 44·8 and 43·1, as compared with 42·6 and 43·6 during the corresponding month of 1936.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ——— Vacancies - - - - - - - - - Placements o—o—o—o—o—o

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during March, 1937, was 1,006, as compared with the daily average of 925 during the same month a year ago and with 1,035 recorded daily in February, 1937.

The average number of applications for employment received daily by the offices of the Service during the month under review was

2,034, in comparison with 1,977 in March, 1936. Applications for work during the preceding month of 1937 averaged 2,033 daily.

The average number of placements made daily by the offices of the Service during March, 1937, was 895, of which 612 were in regular employment and 283 in work of one week's duration or less, as compared with a total daily average of 968 during the preceding month. Placements in March a year ago average 854 daily, consisting of 458 in regular and 396 in casual employment.

During the month of March, 1937, the offices of the Service referred 23,638 persons to vacancies and effected a total of 22,353 placements. Of these, the placements in regular employment were 15,284, of which 10,922 were of men and 4,362 of women, while placements in casual work totalled 7,069. The number of vacancies reported by employers was 14,967 for men and 10,159 for women, a total of 25,126, while applications for work numbered 50,848, of which 37,590 were from men and 13,258 from women. Reports for February, 1937, showed 24,840 positions available, 48,787 applications made and 23,220 placements effected, while in March, 1936, there were recorded 24,050 vacancies, 51,395 applications for work and 22,181 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1927 to date.

Year	Placements		
	Regular	Casual	Totals
1927	302,723	112,046	414,769

Nova Scotia

During the month of March, orders received at Employment Offices in Nova Scotia called for over 27 per cent more workers than in the preceding month, but over 13 per cent less than during the corresponding month of last year. Placements were over 29 per cent higher than in February, but over 15 per cent below March, 1936. The reduction in placements from March of last year was due to a decline in the highway division of construction and maintenance. This loss, however, was partly offset by gains in services, logging and manufacturing. Industrial divisions in which most of the placements were made during the month were: logging, 104; construction and maintenance, 305; and services, 383, of which 305 were of household workers. During the month 142 men and 99 women were placed in regular employment.

New Brunswick

Opportunities for employment as indicated by orders received at Employment Offices in New Brunswick during March, were nearly 4 per cent less favourable than in the preceding month, but nearly 8 per cent better than during the corresponding month of last year. There was a decrease of over 3 per cent in placements when compared with February, but an increase of over 8 per cent in comparison with March, 1936. Although the increase in placements over March of last year was not large, all industrial divisions showed improvement. Most of the placements, however, were in the services' division and amounted to about 90 per cent of the total for the province. Of the 541 placements in services 428 were of household workers. There were 34 men and 111 women placed in regular employment.

Quebec

Orders listed at Employment Offices in the Province of Quebec during March called for over 7 per cent fewer workers than in the preceding month, but over 36 per cent more than during the corresponding month of last year. There was a decrease of nearly 17 per cent in placements when compared with February, but an increase of over 31 per cent in comparison with March, 1936. The increase in placements over March of last year was almost entirely due to relief work on sewer and road construction, as the changes in other groups were unimportant. Of the latter, gains were reported in manufacturing and trade and losses in services, logging and mining. Placements by industrial divisions included: manufacturing, 257; logging, 296; construction and maintenance, 1,728; trade, 82; and services 2,241, of which 2,092 were of household workers. Placements in regular employment numbered 2,287 of men and 1,568 of women.

Ontario

There was an increase of nearly 21 per cent in the number of positions offered through Employment Offices in Ontario during March, when compared with the preceding month, but a decrease of over 15 per cent in comparison with the corresponding month of last year. Placements were over 15 per cent higher than in February, but nearly 19 per cent below March, 1936. The large decrease in placements from March a year ago was due

* 237 placements effected by offices since closed.

to a reduction in the highway division of construction and maintenance, in which group last year large numbers of unemployed were provided with relief work. This loss was largely offset by a substantial increase in logging. Of the changes in other groups a gain in manufacturing and declines in trade, services and mining were the most important. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 674; logging, 1,210; farming, 941; construction and maintenance, 1,287; trade, 243; and services, 3,075, of which 2,253 were of household workers. During the month 3,378 men and 1,368 women were placed in regular employment.

MANITOBA

During the month of March positions offered through Employment Offices in Manitoba were 34 per cent less than in the preceding month and nearly 13 per cent below the corresponding month of last year. There was a decrease also in placements of over 35 per cent when compared with February and of nearly 10 per cent in comparison with March, 1936. The most important changes in placements by industrial divisions from March of last year were declines in farming, construction and maintenance and services and a gain in logging. Placements in these divisions were: logging, 171; farming, 669; construction and maintenance, 191; and services, 525, of which 420 were of household workers. During the month 1,018 men and 300 women were placed in regular employment.

SASKATCHEWAN

Employment opportunities, as indicated by orders received at Employment Offices in Saskatchewan were 34 per cent better than in the preceding month, but nearly 18 per cent less favourable than during the corresponding month of last year. There was an increase of nearly 12 per cent in placements when compared with February, but a decrease of nearly 26 per cent in comparison with March, 1936. A large reduction in farm placements when compared with March of last year accounted for the decline for the province as a whole under this comparison. Small losses were also reported in manufacturing and services, but there was a gain in construction and maintenance. Industrial divisions in which most of the placements were effected during the month were: farming, 579; construction and maintenance 148; and services, 607, of which 492 were of household workers. During the month 593 men and 363 women were placed in regular employment.

ALBERTA

There was a decline of nearly 9 per cent in the number of positions offered through Employment Offices in Alberta during March, when compared with February and of nearly 3 per cent in comparison with March, 1936. Placements were 6 per cent less than in both the preceding month and the corresponding month of last year. As in Saskatchewan, farm placements were considerably less than during March, 1936, and accounted for the decline under this comparison for the province as a whole. This decrease, however, was largely offset by an increase in construction and maintenance. Other changes, which were unimportant, included gains in transportation and trade and losses in services, manufacturing and logging. Placements by industrial divisions included: manufacturing, 60; logging, 54; farming, 527; transportation, 60; construction and maintenance, 535; and services, 432, of which 330 were of household workers. Placements in regular employment numbered 1,186 of men and 289 of women.

BRITISH COLUMBIA

The demand for workers, as indicated by orders received at Employment Offices in British Columbia during March, was 7 per cent less favourable than in the preceding month, but nearly 75 per cent greater than during the corresponding month of last year. There was a decrease of over 7 per cent in placements when compared with February, but an increase of 74 per cent in comparison with March, 1936. All industrial divisions except mining and transportation, where nominal declines only were reported, participated in the increase in placements over March of last year, the most important being in logging. Fairly large increases were also recorded in services, construction and maintenance, manufacturing and farming. Placements by industrial divisions included: manufacturing, 110; logging, 1,186; farming, 192; construction and maintenance, 1,470; and services, 933, of which 512 were of household workers. There were 2,284 men and 264 women placed in regular employment during the month.

Movement of Labour

During the month of March, 1937, the offices of the Employment Service of Canada effected 15,284 placements in regular employment, 7,520 of which were of persons for whom the employment found was outside the immediate locality of the office at which they were registered. Of the latter, 658 were granted the Employment Service reduced transportation rate, 593 going to centres

within the same province as the despatching office, and 65 to other provinces. The reduced transportation rate, which is 2·5 cents per mile with a minimum fare of $4, is granted by the railway companies to bona fide applicants at the offices of the Employment Service who may wish to travel to distant employment for which no workers are available locally.

Transfers from Quebec centres during March numbered 10 and were of bushmen for points outside the province, the Rouyn office despatching 9 to Timmins and the Hull office one to Pembroke. Vouchers of transportation were granted by Ontario offices during March to 483 persons, 482 of whom travelled to situations within the province. For employment within their respective zones the Port Arthur office shipped 308 bush workers, 10 mine workers and one hotel waitress, and the Fort William office 124 bush workers and 3 hotel employees. The Port Arthur zone, in addition, received one mine cook from Ottawa, and the Fort William zone 2 machine runners from Timmins. From North Bay, 28 bushmen went to Sault Ste. Marie and 2 carpenters to Timmins, while from Windsor 2 die makers were bound for Brantford and one clothing worker for Hamilton. The one transfer outside the province was of a diamond drill runner going from Timmins to Rouyn. In Manitoba, 75 workers took advantage of the Employment Service reduced transportation rate during March, 22 of whom went to provincial situations and 53 outside the province. All of these secured their certificate at the Winnipeg office. Travelling within the province 8 farm hands, one farm domestic, 4 bushmen, 4 construction labourers, one miner, 2 mine labourers, one hotel chef, and one diamond drill helper proceeded to various sections of the Winnipeg zone. Of the persons transferred to other provinces, 45 bushmen, 5 bush teamsters and 2 chefs were bound for the Port Arthur zone, and one farm hand for the Regina zone. Alberta offices issued 73 certificates for reduced transportation during March, all provincial. Securing certificates at the Edmonton office 28 transportation employees, 10 farm hands, 2 farm housekeepers, 8 bushmen, 3 fish company employees, 3 sawmill hands, 3 highway construction cooks, 2 hotel employees, 2 mechanics, one engineer, one machinist, one moulder, one miner, one baker and one maid were carried to centres within the Edmonton zone. From Calgary one farm hand journeyed to Drumheller and 2 farm hands within the Calgary zone, to which zone also, one farm hand, one farm domestic and one oil drill worker were despatched from Medicine Hat. Persons benefiting by the Employment Service reduced transportation rate in British Columbia during March totalled 17, of whom 16 were destined to points within the province and one outside. The latter, an oil driller, was shipped from Vancouver to Calgary. Provincially the Vancouver office was responsible for the transfer of 2 mine workers each to the Kamloops and Nelson zones, of one box maker to Penticton, and of 4 mine workers and 3 hotel employees within the Vancouver zone. The balance of this provincial movement was from Prince George, from which centre 4 sawmill hands proceeded to Prince Rupert.

Of the 658 workers who were conveyed at the Employment Service reduced transportation rate during March, 201 travelled by the Canadian National Railways, 444 by the Canadian Pacific Railway, 6 by the Pacific Great Eastern Railway, 5 by the Temiskaming and Northern Ontario Railway and 2 by the Northern Alberta Railway.

(4) Building Permits Issued in Canada During March, 1937

According to returns tabulated by the Dominion Bureau of Statistics, the value of the building permits issued by 58 cities during March was $6,654,516; this was an increase of $4,534,405 or 213·9 per cent over the February total of $2,120,111, and of $4,285,979 or 181·0 per cent as compared with the aggregate of $2,368,537 reported for March, 1936. Last month's total was the largest recorded in any month of the years since 1931.

The value of the building authorized during the first quarter of 1937 was also decidedly higher than in the same months in any of the preceding five years, amounting to $10,470,129. This was an increase of $4,877,658 or 87·2 per cent as compared with the corresponding period of 1936, while the total for the elapsed months of the present year was greater by 286·2 per cent than in the months January-March, 1934, when building as represented by the construction permits granted in the 58 cities was lower than in the first quarter of any other year since the record commenced in 1920. However, the cumulative total for this period in 1937 is below the average of $18,580,660 indicated in the last seventeen years.

Some 50 cities furnished detailed statistics for March, 1937, showing that they had granted about 370 permits for dwellings valued at more than $1,210,000 and nearly 1,600 permits for other buildings estimated to cost approximately $5,400,000. During February, authority was given for the erection of about

200 dwellings and almost 900 other buildings, estimated to cost approximately $800,000 and $1,200,000, respectively.

Quebec, Ontario, Alberta and British Columbia reported increases in the value of the building authorized during March, 1937, as compared with the preceding month. The greatest gains were those of $2,862,140 or 273·3 per cent in Ontario and $1,631,069 or 682·3 per cent in British Columbia. Of the reductions in the remaining provinces, that of $42,690 in Nova Scotia was largest.

As compared with March, 1936, Prince Edward Island, Quebec, Ontario, Saskatchewan and British Columbia reported increases; in this comparison also, the most pronounced gains were in Ontario and British Columbia, where the authorizations were higher by $2,760,955 or 240·4 per cent, and $1,364,086 or 269·6 per cent, respectively. New Brunswick, Manitoba and Alberta showed reductions as compared with March of last year, that in the last-named being greatest. Very little change was indicated in this comparison in Nova Scotia.

Of the larger cities, Montreal and Vancouver reported increases as compared with the preceding month and with March, 1936; in Toronto, there was a gain over the same month of last year, but a loss as compared with February, 1937, while building authorizations in Winnipeg showed declines in both comparisons. Of the other centres, Sydney, Moncton, Quebec, Shawinigan Falls, Sherbrooke, Belleville, Chatham, Galt, Kingston, Kitchener, Ottawa, St. Thomas, York and East York Townships, Windsor, Riverside, Brandon, Regina, Saskatoon, Edmonton and New Westminster reported higher totals than in either February, 1937, or March, 1936.

The following table gives the value of the building authorized by 58 cities during March and in the first quarter of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100. The average index numbers of wholesale prices of building materials in the first quarter of the same years are also given (1926=100).

Year	Value of permits issued in March	Value of permits issued in first quarter	Indexes of value of permits issued in first quarter (1926=100)	Average indexes of wholesale prices of building materials in first quarter (1926=100)
	$	$		
1937.....	6,654,516	10,470,129	46·5	92·5
1936.....	2,368,537	5,592,471	24·9	84·0
1935.....	4,022,755	8,507,270	37·8	81·4
1934.....	1,109,085	2,710,999	12·1	82·2
1933.....	953,966	3,065,821	13·6	75·2
1932.....	3,396,729	9,453,012	42·0	79·3
1931.....	9,948,979	24,746,094	110·0	83·7
1930.....	13,356,787	29,493,262	131·1	96·7
1929.....	24,068,018	42,950,228	190·9	99·2
1928.....	15,128,413	33,163,338	147·4	95·5
1927.....	11,713,640	25,028,353	111·3	96·4
1926.....	10,634,491	22,493,574	100·0	102·0
1925.....	8,631,627	19,981,015	88·2	102·9
1924.....	9,493,620	18,047,999	80·2	112·2
1923.....	9,658,950	19,478,119	86·6	110·6
1922.....	10,615,531	18,680,173	83·0	108·0
1921.....	7,290,589	13,569,512	60·3	139·1
1920.....	8,736,675	18,909,986	84·1	139·4

The value of the building authorized in the first three months of 1937 was higher by 87·2 per cent than in the same period of 1936, and also exceeded the total for the first quarter in any of the preceding four years. However, the total for the months January-March of the present year was lower than in any of the years 1920-1931. The index numbers of wholesale prices of building materials in the last few months have shown an upward movement, but continue lower than in the years prior to 1931.

The following table gives the value of the building permits issued by 58 cities in February and March, 1937, and March, 1936. The 35 cities for which statistics are available since 1910 are marked thus *.

ESTIMATED VALUE OF CONSTRUCTION WORK AS INDICATED BY BUILDING PERMITS ISSUED BY 58 CITIES

Includes Charlottetown report, received too late for inclusion in January tabulation.

EMPLOYMENT CONDITIONS IN CANADA AT THE END OF APRIL, 1937

Reports of Superintendents of the Employment Service

The employment situation at the end of April, 1937, was reported by the superintendents of the Employment Service to be as follows:—

Farmers in the Maritime Provinces were busy getting the land ready for spring ploughing and planting. Fishing, except at Saint John, was poor, but traps were set and final preparations made for the lobster season. Lumber operators were active with river driving and rafting, where the streams were sufficiently deep. Sawmills, also, were busy, with the demand good for experienced mill labourers. Coal mines in the New Glasgow area operated from three to six days per week, while those in Cape Breton and vicinity worked three to five days, with one mine idle all week. Manufacturing showed steady improvement, especially in the iron and steel industries, almost all plants working to capacity. Little new construction was being started, but projects already under way were progressing favourably, and prospects were favourable for the coming summer. Provincial road work had not yet opened up to any extent. Transportation by rail, auto, and water, both freight and passenger, was good. Wholesale and retail trade was favourable, with collections fair. Placements of char workers and household help were made in the women's division.

An increased number of farm orders were listed in the Province of Quebec and many log drivers were in demand in the chief logging centres, Hull, Chicoutimi, Port Alfred and Sherbrooke. Mining showed little change. Manufacturing throughout the Province manifested considerable improvement, particularly in metals, pulp and paper, matches, tobacco and cigars, boots and shoes and iron industries, but clothing factories in Montreal were less active, because of a strike there. Not much new building was taking place, although repairs and alterations provided employment for a number of men. Both trade and transportation were busier. Many openings were available in the women's division for domestic and household help, but in some cases it was difficult to find experienced applicants to fill the positions.

Requests were being received daily in the Province of Ontario for experienced farm

labourers, but this class of help was scarce, as many of the men were registering for work other than that on farms. Serious damage, the amount of which could not be estimated, was caused by floods in Kent County and although the water was going down, some time would elapse before many of the farmers would be able to get back on the land. Activity in lumbering was somewhat limited in volume and confined chiefly to placements of river drivers. A few sawmills also had commenced operations. Mining, likewise, was slack, due to the spring break-up, very few extra surface labourers having been taken on so far this season. Transportation difficulties also affected several outlying properties. Industrial conditions were steady, except in a few localities where labour unrest prevailed. At Oshawa, settlement of the general strike had been attained and considerable activity had taken place in consequence, as other local factories connected with the motor industry had also resumed operations, resulting in the highest number of men being employed since 1930. Many other firms throughout the Province were recalling former hands and employing full staffs, which were working full time. Building prospects were much brighter. Alterations and repairs made up the chief amount of construction undertaken and this afforded work for many skilled mechanics and building labourers. In the flood districts clean-up work was proceeding rapidly, but much renovation would be needed before houses would again be fit for occupancy. Highway construction was also under way. Navigation officially opened about the middle of April and about 250 men at Fort William were called back to various freight sheds. Requests were numerous in the women's division for all classes of house, day, hotel and restaurant workers and a shortage of experienced domestic help was quite evident.

Few farm placements were recorded in the Prairie Provinces and it would appear that many of the farmers were retaining their winter help. Seeding was general and was 40 per cent to 75 per cent completed. Sheepmen were in demand for the lambing season, with wages averaging $35 per month and board, sufficient experienced men being available for this need. A fair amount of activity prevailed in logging, but with few calls for men. Mining and manufacturing were quiet. Preparations were going forward for more extended exploration in oil fields, and the financing of companies, while very slow, was progressing. Building construction in Winnipeg continued to register a splendid advance over the showing made a year ago, although the greater part of the work was for alterations and repairs; elsewhere this industry was very slack. A number of men were placed in casual jobs, such as the removal of storm windows, garden digging, and other seasonal work. Trade showed little change. Except at Winnipeg, there was a nominal decline in the volume of business conducted in the women's sections, fewer orders being received for day workers and domestics, with registrations for employment also not so heavy.

Spring ploughing and seeding in British Columbia had commenced in several localities; although cool weather with rain had held up much outside work. Packing houses were preparing for the 1937 crop, which, if not damaged by frosts, would be the largest for years, especially in soft fruits. Logging was active, with employment opportunities excellent for experienced men. Additional camps had been opened and some companies had started a double shift. The majority of saw and shingle mills, also, was very busy, although those at New Westminster were working only part time, owing to a shortage of logs. Steady production was noted in mining, with a scarcity reported of first class experienced miners. A slight improvement was noted in the building of small houses and additions to private residences, but few large new projects had been started. At Victoria, a definite shortage appeared in many of the skilled trades, which was noticeable when selecting suitable applicants for the positions listed. Road construction continued and the movement of men to and from the forestry camps again had commenced. Some men had also been sent out on extra gangs for railways. Dry docks and shipyards were active at Prince Rupert and Victoria and water-front workers at New Westminster and Prince Rupert also were busy. Trade was moderately good, with collections more satisfactory. A steady demand existed for girls for domestic work, but experienced help was difficult to obtain.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

THE British *Ministry of Labour Gazette*, April, 1937, summarized the employment situation as follows:—

Employment in March, in spite of adverse weather conditions, continued to improve in most of the principal industries. Compared with February 22 the improvement was most marked in coal mining, the woollen and worsted industry, the clothing trades, furniture making, the distributive trades, and hotel and boarding house service. There was a decline in employment in stone quarrying, largely owing to the bad weather.

It is estimated that at March 15, 1937, the number of insured persons, aged 16-64, in employment in Great Britain, exclusive of persons insured under the agricultural scheme, was approximately 11,242,000. This was 55,000 more than at February 22, 1937, and 553,000 more than at March 23, 1936.

Among insured workpeople, aged 16-64 (excluding those insured under the agricultural scheme), the percentage unemployed in Great Britain and Northern Ireland at March 15, 1937 (including those temporarily stopped as well as those wholly unemployed), was 11·8, as compared with 12·2 at February 22, 1937, and 14·2 at March 23, 1936. In Great Britain the percentage at March 15, 1937, was 11·5, as compared with 11·9 at February 22, 1937, and 14·0 at March 23, 1936.

At March 15, 1937, the numbers of persons on the Registers of Employment Exchanges in Great Britain were 1,359,556 wholly unemployed, 167,677 temporarily stopped, and 73,968 normally in casual employment, making a total of 1,601,201, including about 20,000 persons previously unemployed, but registered in March for the first time as a result of the arrangements for the second appointed day for unemployment assistance on April 1. The total of 1,601,201 was, however, 26,644 less than a month before, and 280,330 less than a year before. The total was made up of 1,266,707 men, 41,072 boys, 248,733 women, and 44,689 girls.

The persons on the Registers included 1,350,556 insured persons who were applicants for insurance benefit or unemployment allowances, 136,012 other insured persons (including insured juveniles under 16 years of age), and 114,633 uninsured persons. Of the 1,350,556 applicants for benefit or allowances, 731,778 had claims admitted for insurance benefit, and 552,567 had applications authorized for allowances at March 15, 1937; the balance of 66,211 included 36,926 persons whose position under the conditions relating to contributions paid and benefit received had not been determined, 8,426 persons who had been disqualified for short periods from receiving benefit, and 20,859 persons whose needs had been held not to justify payment of unemployment allowances.

In Great Britain and Northern Ireland the total number of persons on the Registers of Employment Exchanges at March 15, 1937, was 1,676,825, as compared with 1,703,926 at February 22, 1937, and 1,947,998 at March 23, 1936.

United States

According to a statement issued by Miss Frances Perkins, Secretary of Labor, more than 305,000 workers were returned to employment between February and March and weekly payrolls were $15,100,000 greater in the manufacturing and non-manufacturing industries surveyed each month by the Bureau of Labor Statistics.

The March employment gain continues the practically unbroken succession of increases which have been shown each month since February, 1936. Approximately 1,600,000 more workers were employed in these industries in March, 1937, than in March, 1936. Weekly payrolls were $68,400,000 greater than in March of last year. Between March, 1933, and March, 1937, employment in the industries covered by the Bureau of Labor Statistics, which have on their payrolls slightly less than one-half of the non-agricultural workers of the country, increased by 4,850,000. Aggregate weekly payrolls increased by $186,000,000.

Both factory employment and 14 of the 16 non-manufacturing industries surveyed by the Bureau reported gains in employment over the month. Of the 305,000 workers who secured employment the large majority found jobs in manufacturing and in retail trade. Approximately 168,000 found employment in factories, and nearly 118,000 were taken on by the various branches of retail distribution.

Manufacturing Industries

The March index of factory employment (101·0) and the index of payrolls (101·2) reached their highest levels since November, 1929. Gains in employment were registered in both the durable and non-durable goods groups. The increase of 3·0 per cent in the durable goods group raised the March employment index (96·0) above that of any month since November, 1929. The gain of 1.0 per cent in

employment in the non-durable goods group raised the index (106·3) above the level of any month since November, 1929. With the exception of four months in 1929, the March, 1937, non-durable index reached the highest employment level recorded over the 14 years for which data are available. These indexes indicate that for every 1,000 wage earners employed during the index-base years (1923-1925 = 100), 960 workers were employed in the durable goods group in March, 1937, and 1,063 workers were employed in the non-durable goods group.

Factory payrolls continued to expand at a more rapid pace than employment, the increase of 5·6 per cent in payrolls from February to March bringing the March payroll index slightly above the level of employment. During the depression factory payrolls contracted to a point where in March, 1933, they represented only 37·9 per cent of the average weekly wage bill for the years 1923-25. The substantial gains which have been shown in payrolls during recent years have raised the March, 1937, level to 167 per cent above March, 1933. This indicates that the average per capita weekly earnings of factory wage earners of the country in March, 1937, are equivalent to those for 1923-25 and are only 3·8 per cent below the 1929 average.

Wage-rate increases have been a contributing factor to the rise in weekly payrolls of factory wage earners. Between February 15 and March 15, wage-rate increases affecting 305,419 factory wage earners were reported by co-operating establishments employing 4,483,934 workers. As the survey does not cover all establishments of the country and some firms fail to report wage-rate changes, the above total does not represent all wage-rate increases which occurred.

NON-MANUFACTURING INDUSTRIES

The 16 non-manufacturing industries surveyed showed a net gain of 138,000 workers and an increase of $4,000,000 in weekly wage disbursements. Wage-rate increases affecting 42,819 employees were reported by co-operating non-manufacturing firms. Of this number 15,605 were in metal mines and more than 18,700 were workers in the telephone and telegraph and electric light and power industries. Spring purchasing combined with Easter trade accounted largely for the gain of 118,000 in retail trade employment. The general merchandising group, which is composed of department stores, variety and general merchandising stores and mail-order establishments, showed a seasonal gain of 5·6 per cent, or 43,000 workers. A sharp seasonal gain was also shown in retail apparel stores (12·6 per cent) and gains ranging from 1·2 per cent to 2·4 per cent were shown in retail drugs, hardware, automobiles, and lumber and building materials. Dyeing and cleaning plants reported a sharp seasonal expansion in employment (6·3 per cent) and quarries and non-metallic mines also showed a seasonal gain (5·1 per cent). Metal mines continued to expand their forces. The gain in employment of 4·8 per cent in this industry raised the March index (73·0) to the highest level since October, 1930, and indicates an increase of 155·2 per cent from the low point recorded in August, 1932. The private building construction industry showed a seasonal expansion of 2·1 per cent in employment and bituminous coal mines reported a gain of 1·3 per cent, the latter industry exceeding the level of any month since April, 1931. Crude petroleum producing firms and year-round hotels reported gains in employment of 1·2 per cent and 1·1 per cent, respectively. In the hotel industry, the employment level is above that of any month since May, 1931. Increases in employment of 0·9 per cent or less were shown in brokerage, telephone and telegraph, laundries, electric light and power, electric railroad and motor bus operation, and insurance.

Employment in wholesale-trade establishments declined one-tenth of 1 per cent, the losses in several seasonal lines of wholesale activity offsetting the gains reported in dry goods and apparel, food products, groceries, hardware, chemicals and drugs, and a number of other important branches of wholesale trade. Among the larger gains in various lines of wholesale trade was an increase of 4·7 per cent in the iron and steel scrap business which reflects activity resulting from the increased price for this type of material. Employment in anthracite mines fell 7·3 per cent over the month interval, the decline being attributed primarily to market conditions.

PRIVATE BUILDING CONSTRUCTION

Gains in employment and pay rolls were shown in the private building construction industry. Employment increased 2·1 per cent over the month interval and pay rolls rose 2·0 per cent. These percentages are based on reports received from 8,625 building contractors employing 92,432 workers in March 1937. Employment in this industry in March 1937 compared with March 1936 shows a gain of 23·6 per cent. Pay rolls show an increase of 41·2 per cent over the year interval. The reports supplied by the co-operating contractors relate to employees engaged in erecting, altering, and repairing private buildings and do

not include projects financed by Public Works Administration or Reconstruction Finance Corporation funds or regular appropriations of the Federal, State, and local governments.

Public Employment

Employment on projects financed by The Works Program decreased during March. Approximately 2,952,000 employees were working on projects financed by this program, a decrease of 39,000 compared with the number employed in February. Of the total number employed, 2,105,000 were at work on projects operated by the Works Progress Administration. Pay rolls for all workers on the program during March totalled in excess of $146,649,000. During the month orders were placed for construction materials valued at more than $42,158,000 for use on these projects.

More than 177,000 workers were employed on construction projects financed by the Public Works Administration in March, an increase of 2,000 compared with the number employed in February. Of the total number of workers employed approximately 62,000 were working on projects financed by funds provided by the National Industrial Recovery Act and 115,000 on projects financed from E.R.A.A. 1935 and 1936 funds. Total pay-roll disbursements on all projects financed by the Public Works Administration amounted to more than $13,285,000 and materials valued at nearly $20,120,000 were purchased during the month.

Because March was the end of an enlistment period, there was a decrease of 87,000 in the number of workers engaged in emergency conservation work. Of the 307,000 employed in March 257,000 were enrolled workers; 8,000, reserve officers; 2,000, educational advisers; and 40,000, supervisory and technical workers. Pay-roll disbursements for these workers totalled $15,770,000.

In March 115,000 workers were engaged on construction projects financed from regular governmental appropriations. This was an increase of 2,000 compared with the preceding month. Pay-roll disbursements for the month amounted to $9,327,000 and the value of orders placed for materials exceeded $11,810,000.

Of the 131,000 employed in March on the construction and maintenance of roads financed wholly from State funds 11,800 were working on new roads and 119,000 were engaged in maintenance work. Compared with the preceding month employment on State roads dropped 1,000. Pay-rolls totalled $8,334,000.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor the full text of which appeared in the Labour Gazette for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the Provincial Minimum Wages Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of Federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wages scales of the respective provinces.

As respects contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, were superseded in 1930, in so far as wages and hours are concerned by an Act of Parliament known as "The Fair Wages and Eight Hour Day Act, 1930." This Act, however, has now in turn been superseded by The Fair Wages and Hours of Labour Act, 1935, which came into force on May 1, 1936. The clause relating to wages and hours in the last-named statute is in the terms following:—

"All persons in the employ of the contractor, subcontractor, or any other person doing or

contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages;

"The working hours of persons while so employed shall not exceed eight hours per day or forty hours per week except in such special cases as the Governor in Council may otherwise provide, or except in case of emergency as may be approved by the Minister."

The new Act like the 1930 measure, applies not only to contracts made with the Government of Canada for the construction, remodeling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did not appear in the 1930 legislation, which applies the fair wages policy to works of construction, remodeling, repair or demolition that are assisted by federal grant in the form of contribution, subsidy, loan, advance or guarantee.

The practice of the different departments of the Government, before entering into contracts for the construction, remodeling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules known as fair wages schedules, are thereupon included by the Department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade, or fair and reasonable hours on contracts for governmental supplies and equipment, the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid out and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed, claim therefor may be filed with the Minister of the Department with which the contract has been made and payments of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Orders in Council, it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any dispute which may arise.

During the past month statements were received in the Department of Labour showing that the following contracts have recently been executed by the Government of Canada: —

DEPARTMENT OF FISHERIES

Contracts in Group "A" (Construction, Remodelling, Repair, etc.)

Repairing and overhauling the C.G.S. "Givenchy" at Vancouver, B.C. Name of contractors, the B.C. Marine Engineers and Ship-

builders, Ltd., Vancouver, B.C. Date of contract, April 20, 1937. Amount of contract $3,172 and unit prices for additional work. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Blacksmiths	0 75		8
Blacksmiths' helper	0 53½		8
Boilermakers	0 83		8
Bricklayers	1 10		8
Carpenters—ships	0 78¾		8
Caulkers—iron	0 83		8
Caulkers—wood	0 81½		8
Electricians	0 81		8
Labourers	0 50		8
Machinists	0 75		8
Machinists' helpers	0 50		8
Moulders—iron	0 75		8
Painters	0 73½		8
Patternmakers	0 81		8
Platers	0 83		8
Riggers	0 65½		8
Riveters	0 83		8
Rivet heaters	0 63		8
Rivet holders	0 70		8
Ships fitters	0 83		8
Teamsters with team and wagon	1 00		8
Teamsters	0 45		8
Truck drivers	0 50		8
Welders—acetylene	0 76		8
Welders—electric	0 83		8

Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

The Home Office, London, has recently issued two pamphlets, one dealing with "Ventilation of Factories and Workshops" (pamphlet No. 5) and another (pamphlet No. 16) concerning "Weight Lifting by Industrial Workers."

The booklet dealing with ventilation of factories and workshops was published for the purpose of indicating the principles which should be applied to secure satisfactory atmospheric conditions in workrooms, and to describe ventilating appliances and methods available for the purpose.

The other pamphlet was prepared to indicate the extent and causes of accidents in weight lifting, and to draw attention to methods of reducing them, with illustrations from some of the industries in which the lifting or carrying of heavy weights is frequent. Reference is made to the maximum loads which have been suggested for various classes of workers, and to the legal restrictions on weight lifting in Great Britain.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Fishing and Trapping

VICTORIA, B.C.—A CERTAIN WHALING CORPORATION AND THE INLAND BOATMEN'S UNION OF THE PACIFIC, BRITISH COLUMBIA DIVISION.

Agreement to be in effect from March 16, 1937, to October 30, 1937, and thereafter, from year to year until notice of change is given by either party.

The employer recognizes the union and agrees to give preference in employment to members of the union. Any others employed are to join the union.

Food, in which sufficient amounts of fresh fruits, vegetables and meats are included, is to be supplied the crews, as well as bedding.

No man shall be required to work under unsafe conditions.

Hours: on one steamship, hours for deck and engine room employees are on the basis of four hours on duty followed by 8 hours off duty. Overtime on this steamship 65 cents per hour.

On this same steamship, the employer agrees not to pay off the crew unless lay-up period exceeds one week.

Monthly wage rate on this steamship: winchman $75, deckhands $70, fireman $85, oiler $82, cook $75, mess boy $50.

Monthly wage rates and bonuses for the whalers: mate $85 (bonus $4), deckhand and fireman $55 (bonus $3), cook $70.

In case of dispute, work is to be continued and the dispute settled on return to Victoria.

Mining: Non-metallic Mineral Mining

ASBESTOS, QUEBEC.—A CERTAIN ASBESTOS MINING AND MILL COMPANY AND THE NATIONAL CATHOLIC UNION OF ASBESTOS WORKERS.

Agreement reached following the strike which was reported in the LABOUR GAZETTE, February, page 161.

The agreement is to be in effect from January 30, 1937, to December 31, 1937. Negotiations for its renewal or for a new agreement will be held in December.

Work on Sundays allowed only in case of necessity and must be paid for at time and one half.

Hourly wage scale: shovel mechanic (electric) 60 cents, shovel mechanic (gas) 50 cents, groundmen on shovel 35 cents, locomotive engineer 55 cents, electric locomotive engineer 57 cents, locomotive fireman 45 cents, brakemen 37½ cents, conductors 45 cents, switchmen 37½ cents, weighmaster 45 cents, powder storemen 40 cents, general watchman 34 cents, boilers' firemen 40 cents, car repairers 40 cents, store clerk 35 cents, steel workers 40 cents, blasters 40 cents, dispatchers $120 per month, machinist 45 cents, blacksmiths and carpenters 40 cents, electricians 45 cents, linemen 35 cents, tinsmiths 40 cents, tinsmiths' helpers 35½ cents, millwright 41 cents, helper 33½ cents, millwrights on shifts 37 and 40 cents, drillers 38 cents, helpers 35 cents, blasters 40 cents, welders 40 and 50 cents, carder 37 cents, weavers 33½ to 40 cents, truck drivers 37 cents, drivers with truck 90 cents, packing (brake lining) 40 cents. No class of worker may be paid less than 33½ cents.

Piece work rates are to be increased 15 per cent over prevailing rates and foremen's wages 10 per cent.

Apprentices in the trade of packing, brake lining machinist, carpenters, roofers, repair mechanics, blacksmiths, electricians, painters, weighmen, to be paid 60 per cent of journeymen's scale during first year, 70 per cent during second year, 80 per cent during third year, 90 per cent during fourth year. One apprentice allowed for each five journeymen or fraction thereof.

A shop committee representing each of the eight departments is to be elected each year and all employees, whether union members or not, may vote and be elected to the committee. This committee will deal with all grievances and represent the employees in dealing with the company. Any disputes which cannot be settled in this manner will be submitted to arbitration.

Manufacturing: Food, Drink and Tobacco

VANCOUVER, B.C.—THREE BAKERY COMPANIES AND THE INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, STABLEMEN AND HELPERS, LOCAL 189, BAKERY SALESMEN.

Agreement to be in effect from October, November, 1936, and February 12, 1937, respectively, to June 1, 1937, and thereafter from year to year until notice. If any proposed changes cannot be agreed upon, they will be submitted to arbitration.

Only union members to be employed and all employees must sign the check-off agreement. In return for the company agreeing to the check off, the union agrees, that if any union member should defraud the company, the union will pay back the company out of the union funds.

Hours: the salesman's day's work will be finished on completion of his route, but in no case can hours exceed those provided for in the Hours of Work Act. No work on Sunday except that two men may be on hand in case of emergency.

Minimum wages for bakery salesmen: $23 per week. The commission on cakes shall be 10 per cent retail and 5 per cent wholesale. Inexperienced new men will be paid $20 per week for a period of 4 weeks, after which they will receive the regular minimum rate.

Any dispute which cannot be settled by the representatives of the parties must be referred to arbitration.

Vancouver, B.C.—A Certain Bakery and the Bakery and Confectionery Workers' International Union of America, Local No. 468.

Agreement to be in effect from March 8, 1937, to June 1, 1937, and thereafter from year to year until notice of change. If such proposed changes cannot be agreed upon, they will be referred to arbitration.

Only union members to be employed, and the check off for union dues is to be used. The union label will be furnished the employer who must patronize other union shops in case of the shortage. No discrimination to be shown an employee on account of union activity.

Hours: 48 per week.

Overtime and work on day off, time and one half.

Weekly wage rates: doughman and ovenman $27.40 or 65 cents per hour, bench hands and machineman $24.60 or 60 cents per hour, helpers $20.15 or 50 cents per hour, shipper $30, assistant shipper or checker $21, finishers and cake wrappers $17; apprentices $15 during first six months, and to be raised $1 per week every six months for a period of four years. Jobbers $5 per 8-hour day, up to three days.

One apprentice to be allowed for every six journeymen.

Manufacturing: Textiles and Clothing

Toronto, Ontario. — The Toronto Cloak Manufacturers' Association and the International Ladies' Garment Workers' Union and the Toronto Joint Board Composed of the Cloak Operators' Union Local No. 14, Cutters' Local No. 83, Local No. 68, Local No. 94 and Pressers' Local No. 92.

The agreement applies to the whole province of Ontario, and is in effect from January 1, 1937, to December 31, 1938, with the provision that if the cost of living is increased, a revision of wage rates may be requested at the end of the first year, and if settlement cannot be reached, the matter will be referred to the joint commission provided for under this agreement.

Employers recognize the union as the sole representative of the workers and agree to maintain union shops and to employ only union members for the operations of cutting, operating, pressing, finishing, bushelling or tailoring. The union recognizes the employers' association and agrees that it will not enter into any agreement with any other association of manufacturers (other than an association of contractors) or with any individual employer who has been or may hereafter become a member of that association, and that any proposed agreement with an association of contractors or with any other person or firm shall not be on more favourable terms and shall first be submitted to the employers' association for inspection.

The union agrees that no unjust discrimination will be permitted against any employer or against the employee of any member of the association in the distribution of workers' cards or otherwise on account of past attitude to labour unions or strikes. The employers agree that they also will show no discrimination against union members on account of past activities or attitude in strikes or labour unionism or otherwise.

Hours: 8 per day, Monday to Friday inclusive, a 40-hour week.

Overtime permitted only when all unemployed members of the union have been employed. No overtime between Good Friday and July 1 inclusive, or between Thanksgiving Day and January 1 inclusive; no overtime on any Friday or Saturday. No overtime at any time for more than 2 hours in any one day, nor until July 1, 1937, for more than 8 hours in any week or after that date for more than 4 hours in any week. Subject to these restrictions, overtime may only be allowed on permit from the joint commission. Providing a similar agreement is made in Montreal, all overtime permitted after July 1, 1937, will be paid for at time and one half. No work on May 1 or Labour Day. No worker will be compelled to work on any other holiday.

Wage rates: operators to be paid "at the rate which will ensure to the lowest paid operator of that eighty per cent group of the operators engaged by an employer, who are the highest paid of the operators engaged by such employer payment of the sum of $1 per hour"; overpressers at the rate of $1 per hour; underpressers 75 cents per hour; trimmers $25 per week. (The wage rate for any trimmer now receiving less shall be increased having regard to experience and qualification of the operator); cutters $37.50 per week; finishers 55 cents per hour; fur sewers and tailors 70 cents per hour. The rates and conditions for special machine operators, button sewers, machine basters and bushellers to be fixed by the joint commission within two weeks after the agreement signed. Workers engaged in sample making and making of duplicates to be paid a varying percentage (from 20 to 65 per cent) above the piece work rates according to the number of duplicates made except operators who may be paid the regular piece work rates.

Commencing July 1, 1937, piece rates are to be fixed upon a defined body basis, etc. At the beginning of the season, prices shall be fixed for all crafts.

No work to be performed on the section system or any variation of it, in any craft.

When there is not sufficient work for all employees, all available work in the shop shall be divided as equally as possible among all employees properly engaged in the work.

Providing a similar agreement comes into effect in Montreal, each employer, commencing July 1, 1937, will pay to the Toronto Cloakmakers' Unemployment Insurance Fund two per cent of the wages paid each week by such employer to the employees covered by this agreement.

All garments with which any employer deals must be completely manufactured in the inside factory of the employer. All suit skirts must also be manufactured in the inside factory.

The employees in each shop shall select a shop chairman to negotiate with the employer and a price committee to settle prices with the employer.

Any disputes which cannot be settled by the employer and the union will be referred to a joint commission which the parties agree to constitute upon the signing of this agreement, such commission to consist of two members of the union, two members of the employers' association and a fifth, an impartial chairman, to be agreed on. The decision of this commission to be binding and no strike or lockout to occur pending such decision.

Brantford, Ontario. — A Certain Overall and Shirt Manufacturing Company and the United Garment Workers of America, Local No. 237.

Agreement to be in effect from April 12, 1937.

Agreement reached following strike reported on page 491 of this issue.

Only union members to be employed to perform all cutting, operating, pressing and examining. No discrimination on account of union activity.

Hours: 8 per day, 4 on Saturdays, a 44 hour week.

Overtime for both piece workers and time workers: time and one half. Work on Sundays and six specified holidays, double time.

Wages: all new prices for piece work to be agreed upon by the manufacturer and the shop committee to be selected by the employees of the shop. "Examining, inspecting, marking, folding and boxing to be paid for on a week work basis at not less than the minimum scale for all week workers, which is $11 plus increase of 12½ per cent on present wage scale as at this time agreed."

In the slack season, work is to be divided as equally as possible among the employees.

No union employee to be discharged without good reason and without the consent of the union.

A shop steward and a shop committee to be selected by the employees. Any complaint the employer may have is to be dealt with by the shop committee or representative of the union, if required.

Manufacturing: Printing and Publishing

St. Thomas, Ontario.—A Certain Newspaper Publisher and the International Typographical Union, Local No. 459.

Agreement to be in effect from December 1, 1936, to December 1, 1937.

Only union members to be employed.

Hours: 8 per day, a 48 hour week for day work; 7½ per night, a 45 hour week for night work.

Overtime: time and one half; work on Sundays and eight specified holidays, double time.

Wages for compositors, stone hands, floormen, operators and machine tenders: $30 per week.

One apprentice allowed for each four journeymen or fraction thereof. Apprenticeship term to be for six years.

Apprentices to be paid $7 per week to start, with an increase of $1 per week each six months during the six years' apprenticeship.

In a shop where five or more machines are in operation, a machinist to be employed.

Transportation and Public Utilities: Local Transportation

Vancouver, B.C.—Two Taxicab Companies and the International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers, Local 151.

One agreement is in effect from July 18, 1936, to July 17, 1937, and thereafter until 30 days' notice is given. The other is in effect from June 15, 1936, to June 15, 1938, and until 30 days' notice.

Both agreements provide for the employment of union members only, and for the check off for union dues.

Hours are limited to 8 per day. A week's holiday with pay to be given to drivers with a good record.

Overtime to be paid at 50 cents per hour, or in some cases 35 per cent of takings, whichever is greater.

Wages: employees of one company to be paid $3.10 or 35 per cent of takings, whichever is greater on a daily basis; employees of the other Company to be paid $15 for a 48-hour week plus 5 per cent of gross receipts up to $50 and 10 per cent of takings over $50.

Shifts to be chosen according to seniority.

Disputes are to be referred to arbitration.

Transportation and Public Utilities: Street and Electric Railways

Windsor, Ontario.—Sandwich, Windsor and Amherstburg Railway Company and the Amalgamated Association of Street and Electric Railway Employees and Motor Coach Employees of America, Division 616.

Agreement to be in effect from January 2, 1937, to December 31, 1937.

The Company will deal with its employees through their accredited representatives on all matters and grievances that may arise.

Hours for motormen, conductors, one-man car and bus operators: 9 per day, with a maximum of 10 hours. The day's work is to be completed within 11 consecutive hours.

Overtime: all work in excess of 10 consecutive hours, and all work not completed within 11 consecutive hours will be paid at 20 cents per hour over the regular rate.

Substation operators to be given two weeks' vacation with pay.

Hourly wages for motormen, conductors, one-man car and bus operators: 50 cents during first six months, 54 cents during second six months and 58 cents after first year. If training students 50 cents extra per day or part of day to be paid. Wages for substation operators: $130 per month. Wages for men employed in connection with the maintenance and operation of the railway to be not less than 50 cents per hour except in case of apprentices, for whom wage rates are from 30 cents per hour during first six months to 50 cents during second half of third year.

Seniority to govern the choice of runs.

Uniforms to be furnished by the Company.

Free transportation on lines of the Company to employees.

In case of dispute no strike or lockout to occur, but the matter will be referred to a board of arbitration.

Transportation and Public Utilities: Water Transportation

Montreal, Quebec.—Various Steamship and Stevedoring Companies and the International Longshoremen's Association, Local No. 375.

The National Independent Union of Longshoremen (Island of Montreal) Incorporated, which made an agreement with the steamship and stevedoring companies, effective April 1, 1936 (Labour Gazette, April, 1936, page 369), secured a charter from the International Longshoremen's Association as Local 375 of that Association. By an exchange of correspondence dated May 3, 1937, the agreement was changed

to be between the same shipping and stevedoring companies and the International Longshoremen's Association, Local No. 375. No change was made in any of the terms of the original agreement and it continues from year to year until either party gives notice of desire to change.

Vancouver, B.C.—Shipping Federation of British Columbia and the Canadian Waterfront Workers' Association and the Vancouver Longshoremen's Association.

Agreement to be in effect from March 25, 1937, to May 21, 1941, and thereafter from year to year until either party gives notice of change. The schedules of wages, rules and working conditions and despatching regulations became effective April 1, 1937.

This agreement cancels the one previously in effect and summarized in the Labour Gazette, August, 1936, page 749. The new agreement is similar to the previous one, with certain changes, among which are the following:

It is agreed that the two unions parties to this agreement and the North Vancouver Longshoremen's Association (which is a party to a separate agreement which was noted in the April issue of the Labour Gazette, page 455) shall limit their combined membership to 800, of which the two unions in this agreement may together have 715 members, and if any increase in membership is later mutually agreed upon, the unions parties to this agreement will together be entitled to 90 per cent of such increase and the North Vancouver Longshoremen's Association to the remainder.

Schedules governing wages, working conditions and despatching regulations may only be amended once each year by either party giving notice 30 days before May 22 of any year.

Wage rates as were shown in the Labour Gazette, August, 1936, page 750 are increased as follows: all straight time rates, except for work on high explosives and damaged cargo, are increased 5 cents per hour; straight time for ship labour handling high explosives and damaged cargo is increased 7 cents, and dock labour on such cargo 8 cents per hour. Overtime and noon meal hour rates are increased 7 cents per hour for work on general cargo except dock labour, for work on special commodities and creosoted products except loaders, pilers and dock truckers; overtime and noon meal hour rates for dock labour on general cargo and loaders, pilers and dock truckers on special commodities and creosoted products receive an increase of 8 cents per hour; overtime for work on high explosives and damaged cargo is increased 11 cents per hour. The rates for all classes of longshore work on general cargo, special commodities and creosoted products for any meal hour other than the noon meal hour are increased 11 cents per hour.

Trade

Toronto, Ontario.—A Certain Dairy Company and the International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers, Local 647 (Milk Drivers and Dairy Employees).

Agreement, reached following the strike reported on page 496 of this issue. Agreement to be in effect from June 19, 1937, to October 19, 1937, and thereafter from year to year until notice.

Only union members to be employed, if available. If none available, others employed must join the union. The employees have the right to present any grievances to the Company officials through the union representatives. A steward to be selected by the union from the employees at each delivery branch and pasteurizing plant.

Hours: six days to constitute a week's work for all employees. Drivers to be allowed to drive in and settle their account as soon as their routes are properly finished. Hours for stablemen, wagon washers and car washers and factory employees: 8 per day, a 48 hour week.

Employees in the service of the Company for one year, to receive one week's vacation with full pay annually.

Wages: new salesmen $20 for first week; retail drivers $27 to $35.50 per week, varying with the load; wholesale drivers a minimum of $27 with commission on loads over a certain amount. Commissions paid on the sale of butter and other miscellaneous commodities. Wages per week of other distribution employees: senior inspector $38, route runner $35, special delivery $24, wholesale drivers $24 and one per cent commission on total sales, all sales staff $25 per week for six weeks, haulers between branches $30, stablemen $24, stablemen for first six weeks $20.

Wages per week for factory employees (except foremen) $24 to $27 except for first six weeks' employment, for which rate is $20.

Employees in receipt of higher wages shall not have their wages reduced.

The salesmen are not responsible for the extension of credit to customers, nor will they be expected to pay for uncollectable accounts.

Seniority of service to govern choice of positions.

If uniforms required, the company to pay half the cost; such uniforms must have the union label. Factory employees, garage mechanics, car and wagon washers to be supplied overalls, with boots and aprons, as necessary.

Winnipeg, Manitoba.—Two Dairy Companies and the International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers, Local No. 119, Milk Wagon Drivers and Dairy Employees.

Agreement to be in effect from November 1, 1936, to October 31, 1938, and thereafter from year to year until notice.

This agreement is similar to the one summarized above for a dairy company at Toronto, with these exceptions:—

The company assumes all *bona fide* credits up to an amount not exceeding $75. Salesmen shall be responsible for disputed or uncollectable accounts except that the company shall stand one half the loss on retail accounts where the loss is $10 and over and if the salesman has duly reported on the account when it reached $5.

No boys or unauthorized persons to be allowed to ride on wagons or serve customers.

Hours: 8 per day for factory workers, 9 per day for stablemen, washers, etc.

An annual vacation of two weeks with pay is to be given employees after one year's service.

Wages: new salesmen to be paid $10 for the first week. Minimum wages for drivers $28 per week with a commission on sales over the minimum amount; regular drivers peddling in summer holidays $31.75, sales foremen $35, spare routemen $31.75, wholesale drivers $29.45, short order drivers $25, truck drivers $28 and

$28.50, butter truck drivers $32.78; stablemen, washers, etc. $25, engineers $32, electricians $32, firemen $25 to $28. Wages for factory workers not given, but it is provided that wages of all employees not previously mentioned shall remain unchanged.

Quebec Collective Labour Agreements Extension Act

The following amendment to an agreement has recently been made obligatory by an Order in Council and noted in the next article of this issue:—

Barbers and Hairdressers, Quebec (Amendment).

Industrial Standard Act of Alberta

The following agreement has recently been made obligatory by an Order in Council and noted on page 579.

Lathers, Edmonton, Alberta.

COLLECTIVE LABOUR AGREEMENTS EXTENSION ACT OF QUEBEC

Agreement Recently made Obligatory and Further Applications

RECENT proceedings under the Collective Labour Agreements Extension Act include the amendment by Order in Council of an agreement affecting barbers and hairdressers at Quebec, which is summarized below. Notice of request for the extension of a new agreement affecting building trades at Montreal was published in the *Quebec Official Gazette,* March 27, of an agreement affecting granite cutters throughout the Province in the issue of April 3. In the issue of April 10 requests for the extension of agreements affecting building trades at Quebec, dressmakers, and glove makers (fine gloves) both covering the whole province, building trades at St. Hyacinthe and longshoremen (inland navigation work) at Montreal were published. Requests for amendments to the agreements affecting barbers at Hull and building trades at Hull were published in the *Quebec Official Gazette,* March 27, to that affecting plumbers at Hull in the issue of April 3, to the barbers agreements at Quebec and at Portneuf in the issue of April 17, to the building trades agreement at Sherbrooke in the issue of April 24.

The text of the Collective Labour Agreements Extension Act, Quebec, was printed in the LABOUR GAZETTE, May, 1934, page 417, and amendments to the act were summarized in the issues of June, 1935, page 526, July, 1936, page 607, and December, page 1127. Under this Act, applications may be made to the provincial Minister of Labour by either party to a collective agreement made between, on the one hand, one or more associations of *bona fide* employees, and on the other hand employers or one or more associations of employers, to have those terms of such agreement which concern rates of wages, hours of labour and apprenticeship made obligatory on all employees and employers in the same trade, industry or business within the territorial jurisdiction determined by the agreement. The application is then printed in the *Quebec Official Gazette,* and during the following thirty days, objections may be made to the Minister of Labour. After this delay, if the Minister of Labour deems that the provisions of the agreement "have acquired a preponderant significance and importance" that would make the establishment of these conditions advisable, an Order in Council may be passed making the terms obligatory on all employees and employers in the trade, industry or business in the territory included in the agreement from the date of the publication of the Order in Council in the *Quebec Official Gazette* for the duration of the agreement. The provisions of an agreement thus made obligatory govern all individual labour contracts in the trade, industry or business and district, except that those individual labour contracts which are to the advantage of the employee will have effect unless expressly prohibited in the agreement which has been approved by Order in Council. The applications for extension of agreements have been noted and the conditions of the various agreements made obligatory by Order in Council have been given in the LABOUR GAZETTE beginning in the issue of June, 1934. Beginning with the issue of the LABOUR GAZETTE for July, 1935, the terms of agreements have been summarized instead of being printed in full.

BARBERS AND HAIRDRESSERS, QUEBEC.—An Order in Council, approved March 30, and published in the *Quebec Official Gazette,* April 3, amends the previous Order in Council for these trades (LABOUR GAZETTE, July, 1935, page 631, December, page 1157, January, 1936, page 89 and May, page 461) by the addition of certain apprenticeship regulations including the fixing of the apprenticeship term at three years for barbers and two years for male and female hairdressers. It is also now provided that when barbers or hairdressers work by the hour or by the job, they must be paid at the rates set forth in the agreement and they must demand these rates.

INDUSTRIAL STANDARDS ACT OF ALBERTA

Schedule of Wages and Hours Recently Approved by Orders in Council

THE Industrial Standards Act of Alberta, 1935, is similar to the Industrial Standards Act of Ontario, the text of which was printed in the Labour Gazette, June, 1935, page 534, where are also noted the minor differences between the Ontario and Alberta Acts. The Act provides that the Minister of Trade and Industry for Alberta may, upon petition of representatives of employees or employers in any industry, convene a conference or series of conferences of employees and employers in any industry in any zone or zones, to investigate the conditions of labour and practices in such industry and to negotiate standard rates of wages and hours of labour. The employees and employers in attendance may formulate and agree upon a schedule of wages and hours of labour for all or any class of employees in such industry and district. If, in the opinion of the Minister, a schedule of wages and hours for any industry is agreed upon in writing by a proper and sufficient representation of employees and of employers, he may approve of it, and upon his recommendation the Lieutenant Governor in Council may declare such schedule to be in force for a period not exceeding twelve months, and thereupon such schedule shall be binding upon every employee and employer in such industry in such zone or zones to which the schedule applies, the schedule not coming into effect until ten days after the publication of the Order in Council in the Alberta Gazette. The Minimum Wage Board has authority to enforce the provisions of the Act and of the regulations and schedules. Previous schedules under this Act have been summarized in the Labour Gazette, September, 1935, April, July, September, November, and December, 1936.

Lathers, Edmonton and Neighbouring Townships, Alberta.—An Order in Council, dated April 16, and published in *The Alberta Gazette*, April 30, makes binding the terms of a schedule governing the lathing (wood and metal) industry in a zone including the City of Edmonton and neighbouring townships.

The schedule is in effect from May 10, 1937, to May 9, 1938.

Hours: 8 per day, 4 on Saturday, a 44 hour week. Emergency work that can only be done at night to be paid at the rate of 8 hours' pay for 7 hours' work.

Overtime not permitted while competent men are available and there is room on the job to employ such men; but when overtime is worked, time and one half to be paid. Work on Sundays and all recognized statutory holidays, double time. Employees required to set hangers in connection with the pouring of concrete on Saturdays, may be paid straight time for such work on Saturday afternoon and evening.

Wages: for all metal furring and tied on lath work and attached ceilings, 90 cents per hour; wood lath $3.75 per thousand. All nailed on metal and patch work, 75 cents per hour for first class men and 50 cents for second class men. (First class men must be able to put on 1,600 lath in 8 hours to demand 75 cents per hour; second class men shall put on at least 1,100 lath in 8 hours to demand 50 cents per hour; any second class man capable of averaging 1,300 lath in 8 hours to receive 60 cents per hour.

Each shop allowed one apprentice "for a duration of each year," who shall be paid at $3 per thousand.

For work out of the city, transportation to be paid by the employer, and if a lather stays one night or more on a country job he will be paid at $4 per thousand.

Canadian Railways in 1936

Canadian railways showed reductions in gross revenues for five consecutive years starting with 1929, the bottom being reached in 1933 when the revenues were only 48 per cent of the peak reached in 1928. Gross revenues for the next three years have shown improvements, the increases over the preceding year being 11·2 per cent in 1934, 3·1 in 1935 and 7·9 in 1936, and, although car loadings and revenues are not directly comparable, car loadings for the first ten weeks of 1937 were 13 per cent heavier than in 1936. This was an increase of 7·9 per cent over 1935 and 23·8 per cent over 1933, but was 7·3 per cent below 1931 revenues and 40·3 per cent below 1928 revenues.

Operating expenses were increased from $261,761,607 in 1935 to $281,618,561, or by 7·6 per cent, and the operating income increased from $33,305,014 to $37,056,190.

Freight traffic measured in ton miles was 9 per cent heavier than in 1935 and passenger traffic was also 9 per cent heavier. The average number of employees was 125,102 as against 119,874 in 1935 and a comparable number of 176,871 in 1928, the year of greatest railway employment. The total pay roll amounted to $174,413,148 in 1936 and $164,851,311 in 1935 This was an average annual wage per employee of $1,394 in 1936 and $1,375 in 1935.

The 1936 payroll is exclusive of $2,496,077 for relief labour charged to the Dominion Government. This maintenance of way work lasted from May to November and for these seven months the average number of relief labourers was 5,732. The average monthly wage was $62 for these seven months. This relief labour payroll is not included in the operating expenses of the Canadian National, Canadian Pacific and Northern Alberta railways participating with the Dominion Government in the scheme.

PRICES, RETAIL AND WHOLESALE, IN CANADA, APRIL, 1937

Cost of Living, Prices of Staple Articles and Index Numbers

THE cost of the weekly family budget in terms of retail prices was slightly higher than in March, due to advances in the cost of certain foods, while the Dominion Bureau of Statistics index number of wholesale prices declined gradually week by week throughout the month, due in the main to lower prices for grains and non-ferrous metals.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of average retail prices in sixty-nine cities was $8.54 at the beginning of April as compared with $8.49 for March; $7.82 for April, 1936; $7.50 for April, 1935; $6.67 for March, 1933 (the low point in recent years); and $11.24 for April, 1930. Eighteen items in this list of foods cost more in the month under review than in the previous month, while five were lower and six were unchanged. Most of the changes were of a minor nature, the largest increases being in the cost of beef, mutton, fresh pork, butter, flour, beans and sugar, and the largest declines in the cost of eggs and potatoes. Including the cost of fuel and rent with that of foods the total budget cost $17.18 at the beginning of April as compared with $17.13 for March; $16.33 for April, 1936; $15.97 for April, 1935; $15.41 for June, 1933 (the low point in recent years); $21.53 for April, 1930; $20.66 for April, 1922; $26.92 for July, 1920 (the post war peak); and $14.32 for April, 1914. Fuel was practically unchanged and no changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 declined gradually throughout the month, being two per cent lower for the week ended April 30 than for that ended April 2. The figures for the index for the two dates are 85·1 and 86·9 respectively. The latest figures on a monthly basis are for March when the index was 85·5 as compared with 72·2 for April, 1936; 72·5 for April, 1935; 63·5 for February, 1933 (the low point in recent years); 94·5 for April, 1929; 98·4 for April, 1922; 164·3 for May, 1920 (the post war peak); and 64·0 for April, 1914. The downward movement in April was due in large part to lower prices for grains, non-ferrous metals and certain other raw materials which had advanced materially in recent months. Canadian farm products declined seven per cent between the first and last weeks of April but the index for the group was still higher than that for the general index number of wholesale prices. Animal Products advanced two and one-half per cent in the same period, wood products one point six per cent and iron products one point eight per cent.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of April of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The price of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amount due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which figures were available when the publication of retail prices statistics was begun, that is for January, 1910, in the LABOUR GAZETTE for February, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market

price per cord from price quoted. f. Petroleum coke. g. Natural gas used extensively. h. Including lignite i. Including conveniences. r. Mining company houses in district $5–$10 per month; others, five and six rooms, $10–$35. s. Delivered

(Continued from page 580)

conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number of rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926 weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

Retail Prices

Beef prices were higher in most of the cities in April than in the preceding month, sirloin steak being up in the average from 23·6 cents per pound to 24·9 cents, and rib roast from 17·6 cents to 18·7 cents. Leg roast of mutton averaged 23·2 cents per pound in April and 21·9 cents in March, and fresh pork roast was ½ cent per pound higher at 20·9 cents per pound. Fresh eggs were generally lower, the Dominion average price being down 3 cents per dozen to 26·8 cents. Creamery butter advanced in the average from 29·9 cents per pound in March to 30·5 cents in April. The price of flour continued to advance in most cities, the Dominion average being 4·5 cents per pound in April as compared with 4·3 cents in March and 3·4 cents in April, 1936. Dried beans averaged 7·8 cents per pound in April, 7·5 cents in March and 5 cents in April last year. Potatoes were 5 cents per ninety pounds lower than in the previous month at $1.93. Granulated sugar was fractionally higher at 6·4 cents. United States anthracite coal was little changed in price, averaging $14.76 per ton.

Following are the prices reported for Welsh coal, "cobbles" and "French nut": Halifax, $15.50; Charlottetodn, $12.90; Moncton, $15.50;

Saint John, $14; Quebec, $13; Three Rivers, $15 and $14; Sherbrooke, $15 and $15.50; St. Hyacinthe, $14; Montreal, $13.25 and $13.50; Ottawa, $15.25; Kingston, $14.50; Belleville, $15; Peterborough, $15.75; Oshawa, $14.75; Toronto, $14.50 and $14; St. Catharines, $15; Hamilton, $14.50 and $14; Galt, $16; St. Thomas, $16; Cobalt, $18; Timmins, $18; Port Arthur, $17.25; Fort William, $17.25; Winnipeg, $20.

†The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in other Countries; annually. Prices and Price Indexes (Canada and Other Countries).

‡For the week ended April 30, 1937; monthly figures not yet available.

*Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

The following notes afford information as to recent changes in prices in Great Britain and certain other countries. Tables giving official and certain other index numbers of cost of living, retail and wholesale prices in Great Britain and certain of the principal commercial and industrial countries appeared in the April issue of the LABOUR GAZETTE.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1930 = 100, was 107·3 for March, an increase of 3·3 per cent for the month. Increases were recorded in all groups.

The *Statist* index number, on the base 1867-1877 = 100, was 106·9 at the end of March, an advance of 5·1 per cent for the month. Advances were recorded in all groups, the greatest change in any one group being in vegetable foods which rose 6·5 per cent, while the animal food group rose 6·2 per cent and the combined foodstuffs group rose 5·9 per cent. The mineral group increased by 6·0 per cent.

COST OF LIVING.—The Ministry of Labour's index number on the base July, 1914 = 100, was 151 at the beginning of April, showing no change from any one of the previous five months.

France

Wholesale Prices.—The General Statistical Office index number, on the base July, 1914 = 100, was 537 for March as compared with 517 for February, an advance of 3·9 per cent for the month. Every group showed an increase over the February level.

Germany

Wholesale Prices.—The index number of the Federal Statistical Office, on the base 1913 = 100, was 106·1 for March, an increase of 0·6 per cent for the month. The greatest change recorded in any group was a rise of 17·4 per cent in non-ferrous metals.

Cost of Living.—The official index number, on the base 1913-1914 = 100, was 125·0 for March, an increase of 0·2 per cent for the month due to slight advances in the prices of food, clothing and sundries.

United States

Wholesale Prices.—The Bureau of Labour Statistics index number, on the base 1926 = 100, was 86·3 for February, an advance of 0·5 per cent for the month. The moderate upward movement extended to eight of the ten groups, food declining slightly and textiles remaining at the January level. Building materials showed the greatest increase.

Cost of Living.—The Bureau of Labour Statistics index number, on the base 1913 = 100, was 146 at March 15, showing an increase of 1·7 per cent from the December 15, 1936, level. The food group showed an increase of 2·9 per cent for this period, house furnishings increased 4·9 per cent, while all other groups increased only slightly.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1937

The number of fatal industrial accidents (including fatalities from industrial diseases reported with fatal accidents by workmen's compensation boards, etc., as well as fatalities to persons incidental to the pursuit of their occupations) which were recorded in the Department as occurring during the first quarter of 1937 was 229, there being 80 in January, 73 in February, and 76 in March.

The report for the fourth quarter of 1936, showing 287 fatalities, was given in the Labour Gazette, February, 1937, page 231. In the first quarter of 1936, 205 fatal accidents were recorded (Labour Gazette, May, 1936, page 472.) The supplementary list of accidents, not reported in time for inclusion in the reports covering the periods in which they occurred, contains 22 fatalities for 1936.

In this series of reports it is the custom to record industrial accidents under the dates of their occurrence and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the Provincial Workmen's Compensation Boards, from the Board of Railway Commissioners of Canada, from certain other official sources and from the correspondence of the Labour Gazette. Information as to accidents is also secured from newspapers.

Classified by groups of industries the fatalities occurring during the first quarter of 1937 were as follows: agriculture, 34; logging, 33; fishing and trapping, 13; mining, non-ferrous smelting and quarrying, 40; manufacturing, 33; construction, 17; electric light and power, 2; transportation and public utilities, 41; trade, 7; service, 9.

Of the mining accidents, 17 were in "metalliferous mining," 18 in "coal mining," and 5 in "non-metallic mineral mining and quarrying, n.e.s."

Of the accidents in manufacturing, 1 was in "vegetable foods, drink and tobacco," 2 in "animal foods," 19 in "saw and planing mill products," 5 in "iron, steel and products," 1 in "non-ferrous metal products," 1 in "non-metallic mineral products," and 1 in "chemical and allied products."

In transportation and public utilities, there were 23 fatalities in "steam railways," 2 in "street and electric railways," 5 in "water transportation," 10 in "local transportation," and 1 in "storage."

In trade there were 2 fatalities in "wholesale," and 5 in "retail."

Of the fatalities in service, 4 were in "public administration," 1 in "recreational," 2 in "custom and repair," and 2 in "personal, domestic and business."

There was no serious disaster resulting in a very large number of fatalities during the period under review. Accidents involving the loss of two or more lives were as follows:—

On February 19, two loggers were killed when a sleigh load of logs jumped the track on an icy hill, near Fort Frances, Ontario.

Two fishermen broke through ice and were drowned in Lake Nosbonsing, Ontario, on January 8. Two hunters perished from cold and hunger when lost in the woods on January 25, near Havre St. Pierre, Quebec. When a motor boat capsized in a storm off Port Maitland, Nova Scotia, two fishermen were drowned on February 1. Two fishermen were swept

overboard and were drowned when the pilot house of a vessel was hurled into the sea in a storm off Lunenburg, Nova Scotia, on February 17. Another two fishermen were drowned following a collision of two schooners, near Halifax, Nova Scotia, on March 15.

Two smelter workers were crushed by coal grinding rollers while working in a coal pulverizer at Copper Cliff, Ontario, on January 2. Two asbestos miners were killed in a premature dynamite blast at Thetford Mines, Quebec, on February 27.

On March 31, three saw mill workers lost their lives in a boiler explosion, at Biencourt, Quebec. Two rivet factory workers were poisoned by inhaling cadmium fumes in a plating room at Gananoque, Ontario, on February 27. One of these men died on March 4, and the other on March 7. After having heard the report of a special autopsy performed by the provincial medico-legal expert from the attorney generals department and a noted chemist from Toronto University, the verdict given by the coroner's jury was that these fatalities resulted from inhaling cadmium fumes which were given off during a rivet plating process.

On January 2, a passenger train crashed into the rear of an extra freight train in a snow storm near St. Rosalie, Quebec; and an engineer, a conductor and a brakeman lost their lives. When a train was derailed by a snowslide, near Revelstoke, British Columbia, on February 11, a conductor and a fireman were killed; and an engineer and fireman lost their lives in a similar accident, near Hope, British Columbia, on February 21.

When a rowboat was caught in a storm off Yarmouth, Nova Scotia, on March 20, a captain and two seamen were drowned.

Supplementary List of Accidents

A supplementary list of accidents occurring during 1936 has been compiled which contains 22 fatalities, of which 3 were in agriculture, 2 in logging, 6 in mining, non-ferrous smelting and quarrying, 4 in manufacturing, 2 in construction, 1 in electric light and power, 1 in Transportation and public utilities, 2 in trade and 1 in service. Two of these accidents occurred in February, 1 in March, 2 in July, 2 in August, 5 in October, 3 in November, and 7 in December.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Early Closing By-Law Upheld in Nova Scotia

IN January 23, 1937, the Nova Scotia Supreme Court dismissed with costs the appeal of the defendants who had been convicted by the Stipendiary Magistrate of Truro for violation of the town's early closing by-law. Each of the four defendants had been fined $10 and $5 for costs. Their appeals were rejected by the County Court Judge who awarded costs of appeal in the sum of $15 against each appellant.

The Nova Scotia Towns' Incorporation Act enables the town council to make by-laws "providing that during the whole or any part of the year all or any class or classes of shops, stores or places in which goods are exposed or offered by retail in the town shall on any day or on certain days be closed to customers during certain hours." The Act provided that such by-laws "when approved by the Governor in Council shall have the force of law."

The by-law passed under the authority of this section required all classes of retail shops to be closed on Wednesdays at 12.30 p.m., from June 1 to October 1 and, subject to that condition, on Mondays, Wednesdays and Fridays at 6 p.m. and from January 1 to April 1 on Tuesdays at 6 p.m. It was stipulated that the by-law should not apply to drug stores, pool rooms, tobacco shops, restaurants, ice-cream parlours, candy shops or barber shops. Tobacco and candy shops are defined as places of business in which more than 60 per cent, or at least 60 per cent, respectively, of the merchandise carried is of the nature specified.

The main point in the defence was that the by-law was "unreasonable, oppressive and discriminative and therefore invalid." The Court pointed out that there was no discrimination between any of the merchants of any of the classes to which the by-law applied, that in a leading English case it was stated by Lord Russell that by-laws of public representative bodies clothed with ample authority and exercising that authority should be supported if possible. "There is nothing to suggest that the by-law was not enacted in good faith and in my opinion the appellants have failed to show unreasonableness, oppression or discrimination."

R. v. Awad et al, (1937) 2 Dominion Law Reports 136.

Schedule of Wages and Hours under Ontario Act Held Ultra Vires

An appeal by way of a stated case from a conviction by Magistrate Cowan of Toronto for a violation of the schedule of wages established under the Industrial Standards Act was allowed by Mr. Justice McEvoy of the High Court of Justice of Ontario on April 8, 1937. The appellants who carry on a plumbing business were charged with violating the schedule of wages fixed for the plumbing and heating trades in the Toronto zone by order in council of September 24, 1936.

It appears that the company paid its employees the legal minimum rate established under the Act but charged them fifteen cents an hour rent for trucks owned by the company and used by the employees in the conduct of its business.

In the opinion of the Court, the order in council approving the schedule of wages and hours for the plumbing industry was invalid since it exceeded the powers conferred by the statute. The Act provides that "the Minister may, upon the petition of representatives of employers or employees in any industry" convene a conference of the employers and employees in such industry for the purpose of agreeing upon a schedule of wages and hours of labour. After a schedule of wages and hours and days of labour has been agreed upon by a proper and sufficient representation of employers and employees, the Minister of Labour may recommend that the Lieutenant-Governor in Council declare the schedule to be binding "upon the employers and employees in the industry referred to in such schedule."

The Order in Council approving the schedule for the plumbers' trade stipulated: "the schedule of wages and hours and days of labour shall govern the employment of all persons working in the plumbing and heating trades." The expression "plumbing and heating trades" is defined to include all work usually done by plumbers, steamfitters, etc.

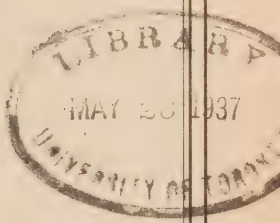
Counsel for the appellant argued that, under the terms of the order in council, the rates of wages and hours of labour would apply to plumbers employed by private citizens, whereas under the Act they could be made to apply only to employees hired by "employers in the industry." The order in council was therefore ultra vires. This contention was accepted by the Court and the appeal allowed with costs.

R. v. Belyea Bros. Ltd, (1937) Ontario Weekly Notes 231.

DEPARTMENT OF LABOUR, CANADA

HON. NORMAN McL. ROGERS, Minister — W. M. DICKSON, Deputy Minister

REPORT



OF

WORLD CONFERENCE ON THE SOCIAL AND ECONOMIC PROBLEMS OF THE TEXTILE INDUSTRY

Held In Washington, D.C.,
April 2-17, 1937

Issued as a Supplement to THE LABOUR GAZETTE
MAY, 1937

OTTAWA
J. O. PATENAUDE, I.S.O.
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1937

REPORT OF WORLD CONFERENCE ON THE SOCIAL AND ECONOMIC PROBLEMS OF THE TEXTILE INDUSTRY

A WORLD Conference on the Textile Industry was held in Washington, D.C., under the auspices of the International Labour Organization (League of Nations) from April 2 to 17, 1937, to consider all those aspects which directly or indirectly may have a bearing on the improvement of social conditions in different branches of the textile industry, including cotton, wool, silk, rayon (artificial silk), linen, jute, etc.

Each Government participating in the Conference was invited to send three delegates, one representing the Government, one the Employers, and one the Workers, each of whom might be accompanied by technical advisers having the right to speak but not to vote. At this Tripartite Technical Conference, twenty-seven countries were represented, of which fifteen sent full delegations, while eight had only Government delegates and four other countries were represented by Government observers alone. The attendance, therefore, comprised sixty-two delegates, one hundred and twenty-three advisers, four observers and seven secretaries, making 196 in all.

Countries Represented

The following is the list of countries represented (in all of which textile production forms an important part in the national economy): Belgium, Brazil, the British Empire, Canada, China, Cuba, Czechoslovakia, Ecuador, Finland, France, Germany (Government observer), Greece, Guatamala, India, Japan, Latvia, Mexico, Netherlands, Peru, Poland, Roumania (Government observer), Sweden, Turkey (Government observer), the Union of Socialist Soviet Republics, the United States, Uruguay, and Yugoslavia.

Canadian Delegation

The Canadian delegation was made up as follows:—

Government Delegate:

Mr. Gerald H. Brown, Assistant Deputy Minister of Labour, Ottawa, Ont.

Technical Advisers to Government Delegate:

Mr. James F. Marsh, Deputy Minister of Labour for the Province of Ontario, Toronto, Ont.

Mr. Gerard Tremblay, Deputy Minister of Labour for the Province of Quebec, Quebec, P.Q.

Mr. Alfred Charpentier, President, La Confederation des Travailleurs Catholique du Canada, Inc., Montreal, P.Q.

Mr. A. S. Whiteley, Secretary, Royal Commission on the Textile Industry, Ottawa, Ont.

Employers' Delegate:

Mr. H. G. Smith, Chairman of the Board of Directors, Mercury Mills, Limited, Hamilton, Ont.

Technical Advisers to Employers' Delegate:

Mr. Jackson H. Marx, President, Associated Textiles of Canada, Limited, Montreal, P.Q.

Mr. Blair Gordon, Managing Director, Dominion Textile Co., Limited, Montreal, P.Q.

Mr. A. V. Young, President and General Manager, Hamilton Cotton Co., Ltd., Hamilton, Ont.

Mr. Douglas Hallam, Secretary, Primary Textiles Institute, Toronto, Ont.

Workers' Delegate:

Mr. P. M. Draper, President, Trades and Labour Congress of Canada, Ottawa, Ont.

Technical Advisers to Workers' Delegate:

Mr. Alphonse Morrissette, President of Local Union No. 2467, United Textile Workers of America, and Financial Secretary, Trades and Labour Council, Three Rivers, P.Q.

Mr. Alexander Welch, member of Local Union No. 2495, United Textile Workers of America, Toronto, Ont.

Mr. Arthur Laverty, President of Local Union No. 2499, United Textile Workers of America, Cornwall, Ont.

Officers of the Conference

The following were elected officers of the Conference:

President.—Honourable John G. Winant, former Governor of New Hampshire, U.S.A.

Vice-Presidents.—Mr. J. Kitaeka, Japanese Government delegate; Mr. Arthur Shaw, British Workers' delegate; and Mr. H. C. Oersted, Danish Employers' delegate.

Mr. Harold Butler, Director of the International Labour Office, served as Secretary-General of the Conference.

Report on Economic and Social Problems

In advance of the opening of the Conference in Washington, a report in two volumes of over six hundred pages had been prepared in the International Labour Office entitled "The World Textile Industry; Economic and Social Problems." In this Report it was frankly admitted that the Tripartite Technical Conference on the Textile Industry in Washington was an experiment and represented the first attempt by the International Labour Organization to review the general situation of a world-wide industry in order to explore the possibility of improving its social standards. This report served in reality as the agenda of the Conference, dealing as it did with all of the aspects of the textile industry which might bear on the improvement of the social conditions of the workers. Consequently, it contained chapters relating to such matters as production, consumption, trade tariffs, etc., with a view to sketching the economic background against which the problems of employment, wages, hours and working conditions must be viewed, since reference to the economic, commercial and financial conditions of the industry is inevitable in considering how the improvement of labour conditions in the industry can best be advanced.

Importance of Textile Industry

It was pointed out in the International Labour Office Report that textiles comprise one of the most important of the world's industries, affording employment to about fourteen million workers, or between three and four per cent of the world total of workers who are gainfully employed. In individual countries the percentage of the total is much higher, ranging as high as fifty per cent of all the industrial workers in Japan. The value of the output of textile mills in relation to the volume of all factory output was shown as about nine per cent in the United States (in 1933), in England, about fourteen per cent (in 1930), and in Japan, approximately 26 per cent (in 1933). Textile products constituted about 17·6 per cent of the total world trade in 1935, the most recent year for which international statistics on world trade are available. In individual countries the ratio of textiles to total exports is much higher—56 per cent in Japan, 34 in India, 30 in Italy, 28·9 in China, and 27·1 in the United Kingdom. Raw materials for the textile industry are scattered far and wide. Of the important textile-producing countries, many are deficient in one or more of the raw materials, but on the other hand, some of the principal textile manufacturing countries are almost self-sufficient in one or more of the raw materials. Over ninety per cent of the world's cotton supply of 1934-35 was grown in the United States, India, China, U.S.S.R., Egypt, and Brazil. The major wool producing countries are Australia, the United States, Argentina, New Zealand, and the Union of South Africa, which together produced about sixty-four per cent of the world's total. Silk cocoons are even more highly localized. Japan in 1934 produced 76·7 per cent of the world's raw silk, a percentage which reaches 82·1 per cent if Korea is added. The U.S.S.R. predominates in the world supply of flax, while India alone produced almost ninety-nine per cent of the total world output of jute. In many countries, textile raw materials are grown primarily for the export trade. The economic fortunes of many countries, therefore, are closely bound to world trade in textile raw materials.

Major Structural Changes

The economic and social problems confronting the industry to-day are attributable to the interaction of business cycles with long-run forces making for basic changes in textile production and trade. These long-run forces have modified the international structure of textile production and trade. These factors of structural change, rooted in industrial shifts and in changing habits of consumption, have become accentuated and complicated during the past decade by monetary policies, efforts toward national self-sufficiency and other forces.

The major problems of structural change in cotton textile manufacturing are five in number. First, while the productive capacity of the United Kingdom has been declining, that of Japan and India has increased. All the relevant indices—the consumption of raw cotton, the number of looms and spindles in place, and the production of cotton yarn and piece goods—testify to the progressive loss of the dominance of the United Kingdom in cotton textile manufacturing and the expansion of the industry in Japan and India. Second, cotton textile manufacturing has been developing rapidly in newly industrialized areas, notably China, Latin America, Brazil, and the Balkans. China, for example, which was formerly one of the world's largest import markets for cotton piece goods and yarns, is to-day rapidly approaching self-sufficiency in both, now exporting an appreciable surplus of cotton yarns to India. While in 1913 she had only about 933,000 cotton spindles, in 1936 she possessed 5,010,000. There are four main causes of this diffusion of cotton textile manufacturing to new countries, briefly, the post-war develop-

ment of economic nationalism, the continued advance of the Industrial Revolution, the relative simplicity of the technique of production, and lastly, the relatively unskilled labour required. The diffusion of the industry points to a tendency for it to migrate from countries of higher to those of lower labour costs. The third structural change of the world textile industry is the intra-national shifts in India and the United States, manifesting the same tendency for cotton manufacturing to move from areas of higher to those of lower labour costs. Fourthly, the World War brought about many important changes in the international localization of cotton textile production. The nature of these changes may be summarized in the formula of constant productive capacity in the face of contracted markets. Policies of national self-sufficiency constitute the fifth major structural change, placing strains on the cotton textile manufacturing of countries which pursue such policies. The scarcity of raw materials in Italy and Germany is a case in point.

In wool textiles, as in cotton textiles, world trade has contracted more sharply since 1928 than world output. In the general process of contracting trade, the United Kingdom suffered perhaps less than most countries, although between 1928 and 1931, her exports of woollen tissues shrank to one-half their former volume. Only one country—Japan—succeeded in expanding its exports of woollen and worsted tissues. The differential movements in other textiles indicate that the production and trade in their products were subject to the same play of structural forces operative in the case of cotton and wool. Thus, the period was marked by a spread of the Industrial Revolution to new and distant countries, superimposed on a long and deep economic crisis, which brought sharp pressure to bear upon the international trade in textiles and rearranged its entire network. At the same time the total output of textiles failed to rise appreciably. By 1936, despite the increase in the world's population, the world output of all textiles combined was at best somewhat short of the 1929 level.

Textile Wages

The textile industry in most countries is characterized by lower wages than industry in general. Hourly and weekly wages in most countries fall below the average for industry as a whole, wages for both men and women textile workers separately showing the same tendency toward lower levels. In the period following 1929 particularly, owing to contraction in the numbers employed and the total hours worked, total wages paid, expressed both in money and in purchasing power, show a reduction almost everywhere. As regards wages expressed in a uniform standard, there are enormous differences as between countries. Wages are lowest in the Far East, China, Japan and India, higher in the countries of Central and Eastern Europe, next highest in such countries as Sweden, Germany and Great Britain, and highest of all in the United States and Canada. These conclusions do not hold equally for all branches of the industry, for some have fared better than others, but when the wage situation in textiles is compared with that of other industries, textile workers appear on the whole to be in a worse position than most workers in other industries in most countries.

Opening Proceedings

Mr. J. Necas (Czechoslovakia), as Chairman of the Governing Body of the International Labour Office, presided at the opening of the proceedings of the Conference and extended a welcome to two members of the United States Cabinet, Miss Frances Perkins, Secretary of Labor, and Honourable Daniel C. Roper, Secretary of Commerce, both of whom addressed the Conference, expressing the deep interest of the United States Administration in its deliberations. The former observed that the workers of the world are united in their expectation that conditions of work shall be improved, adding that employers and Governments ask and expect patient co-operation in arriving at a firm understanding of problems, but that they should not ask and may not expect workers to tolerate discussion alone as a substitute for action. Secretary Perkins advocated a "levelling up of labour standards in all countries," maintaining that "conditions derived from low wages are only temporary." She felt that the solution "must be found in part through increases in the purchasing power of the underlying populace throughout the world." Nor, she declared, will nations bind themselves to an advancement of labour standards if their goods can enter the channels of world trade only over mounting barriers.

Secretary Roper told the Conference that the prosperity of the textile industry depends upon "the observance of fair trade practice and the maintenance of production schedules on the basis of scientifically determined consumption needs." He declared that "research must lead the way, for we are looking ultimately not to a narrowly restricted program

38601—2½

but to one that will also more adequately satisfy consumer needs." The problem of the textile industry, he considered, was not so much one of over-production, as the need for better distribution and increased consumption. He pictured a better day dawning for co-operative action between management and workers and pleaded for "the old-fashioned virtue of patience, tolerance and understanding," and said that this was the secret of industrial peace.

The following also took part in the opening proceedings: Mr. C. A. Pardo (Argentine Republic), Senator Corneille Mertens (Belgium), and Mr. H. C. Oersted (Denmark) on behalf of the Governing Body of the International Labour Office, Mr. Charles Picquenard, French Government Delegate. Juitso Kitaeka, Japanese Government Representative to the International Labour Organization in Geneva, and Mr. Gerald H. Brown, Canadian Government Representative, who joined with the representative of the United States Government in welcoming the delegates and technical advisers who had come from such distant points of the world—from Asia, Europe and South America—to attend this notable gathering.

Greetings from President Roosevelt

A letter was read to the Conference by Mr. Harold Butler, Director of the International Labour Office, which had been received the same morning from Mr. Franklin D. Roosevelt, President of the United States, expressing his regret that he was unable to be present at the opening of this gathering and recalling the fact that the first Conference of the International Labour Organization had been held in Washington in 1919. The International Labour Organization, Mr. Roosevelt wrote, was then but a great experiment, hardly more than a hope; for the first time the representatives of employers and of workers met in an International Conference with equal powers with the representatives of governments to seek a greater measure of social justice in life, in liberty and in the pursuit of happiness. He added:—

"We have much to do. The Conference which is about to meet will discuss vital problems as they affect one of the world's greatest and most highly competitive industries, and one upon which the welfare of more than twelve million people depends. The task is not easy. I know that no decisions are expected to be reached by this preparatory conference, that no Conventions or Resolutions are to be adopted, but I am confident that this open meeting of minds, which is an opportunity for free and frank discussion of the problems of the industry in a spirit of good will, cannot but have a far-reaching effect upon the ultimate prosperity of the industry and on the well-being of the millions whose livelihood depends upon it. I wish you all success."

Address of Conference President

In assuming his duties as President of the Conference, the Honourable John G. Winant said:—

"We are embarking upon a significant and in some respects a novel venture. It is significant because we are dealing with a great industry. I think that we can best appreciate the importance of the textile industry, not in terms of production or world trade, but in simple terms of the number of workers who depend upon it for a livelihood. The textile industry employs about 14,000,000 workers. In each of five countries—Germany, United States, India, Japan and the United Kingdom —more than one million workers are engaged in the industry. In France and in the U.S.S.R. some 900,000 are employed; in Italy over 750,000. Our work at this Conference then will directly affect the lives of some 50,000,000 persons, including those actually engaged in the textile industry and those dependent upon them.

"Our venture is significant also because the influence of the work we do here will extend beyond the confines of the textile industry. If we accomplish successfully the aims of this Conference, we will leave our mark upon the efforts of all nations to find some solution of the fundamental economic and social problems that face the world to-day. For the problems of the textile industry reflect the basic problems of world industry.

"At the same time our approach will be somewhat unusual. We are not here to adopt or reject a Draft Convention, or to reach a final decision of any sort. We are here rather in the role of technicians, to engage in scientific enquiry. Our purpose, in a word, is to assemble the basic technical information neces-

sary for an intelligent approach to social conditions in the world textile industry. . . .

"The aim we have set for ourselves is the improvement of social conditions in the world textile industry. The difficulties inherent in this aim need not be emphasized. Nevertheless, we must face these difficulties realistically. We cannot ignore the fact that the varying standards of living in different countries, that the integration of the textile industry of a particular country with the whole economic structure of that country, that the relation of hours of work, or other special phases of the textile industry, to the industry as a whole—that all these things and many more raise questions which will tax our best efforts.

"However, we need not be dismayed; when we come to analyze the situation in more detail I think it not unlikely that we may find a path that we may usefully follow. By way of illustration, let me take two outstanding features of the textile problem both of which have already been commented upon.

"The Report of the International Labour Office discloses that the wages of textile workers are on the whole lower than those of workers in other industries. It is the task of this Conference to examine further into this condition. Why should this be so? What are the factors involved here? If we can discover these factors can we not through international action raise wages in textiles at least to the level of other industries? Can we not reasonably expect that, without erecting inconsistencies between the textile industry of an individual country and the economic structure of that country as a whole, other social conditions in the textile industry can likewise be raised to the level of other industries?

"Or take another feature of the problem that will undoubtedly be discussed at length. The Report of the International Labour Office sums up its findings upon production and consumption in the following words:—

'In the end, then, the analysis points to the existence of a sort of paradox. Although the demand for textiles expands considerably with an increase in income, the total effective demand for textile manufactures at the period of highest prosperity grew but moderately as compared with the immediate pre-war years. Clearly, on the basis of the evidence, textile manufacturing may be described from the commercial point of view as an industry of over-production. From the social point of view however—that is, from the point of view of individual and family requirements—it may be characterized as an industry of under-consumpton.'

"This, it seems to me, brings us close to the heart of the textile problem. How can we solve this paradox? What can be done to develop the possibilities of consumption and increase the effective demand? To attempt an answer now would be to anticipate the work of the Conference. Nevertheless one line of enquiry may be suggested. That is the vital importance of a restoration and expansion of international trade as a whole if standards of living for the masses of the people are to be raised to levels which will permit increased consumption of textiles and of other things. Turn whichever way you will, there is no getting away from this fact. The problem of international trade is universal, and no international gathering concerned with improvement of conditions of any major world industry, be it textile or otherwise, can afford to overlook it. . . .

"We will, I am sure, all of us without exception agree that our task at this Conference is threefold:—

"First, we must define and analyze the problems of the textile industry in a degree sufficient to suggest the lines along which action may be taken.

"Secondly, we must assemble all relevant data that is available in the form of statistics, reports and tables. The fine Report of the International Labour Office is an excellent beginning. Nevertheless, as the Report itself makes clear, many important gaps in our information remain. These gaps we should make every effort to fill.

"Thirdly, we should obtain from this Conference a record of the actual experience in the industry of those assembled here. Bare statistics do not give a sufficient understanding of the problem. We need to go beyond and behind the figures. We need to grasp the customs and traditions of the industry, the reaction of workers and employers to their tasks—in short, we must obtain a living picture of the world textile industry."

Address of Director of the International Labour Office

Before the Conference settled down to work, Mr. Harold Butler, the Director of the International Labour Office, Geneva, offered a few observations as to the problems with which the Conference had to deal. It had not been summoned to deal with a particular social problem but with the whole social condition of one of the world's great industries. Touching on the preliminary report which had been prepared by the International Labour Office, he acknowledged a number of compliments which had been paid to this report in the

preliminary speeches. The principal points which, in the light of the report, seemed to require consideration were as follows:—

In the first place, there was the general economic situation of the industry. In most of the larger textile countries, textile wages, that is to say, if not actual wage rates, at all events earnings, are below the general wage level of other industries. That is one of the cardinal facts which might be taken as a starting point for considering how improvement might be brought about. Another fact is the very slow expansion in the consumption of textiles over the last twenty-five years and, on the other hand, the considerable expansion in productive capacity. Unless the problem of lagging consumption can be dealt with, the problem of increased and increasing productivity is likely to remain unmanageable.

More complete statistics as to employment, wages, etc., in textile manufacturing are urgently required. This industry is one in which a particularly large number of women and young persons are employed. In most countries, more than one-half of the labour force consists of women. While in most countries more than one-quarter of the workers are below twenty or twenty-one years of age, in some cases the proportion is even higher, such as in Italy, where it is 31·1 per cent, Brazil, 35·5 per cent, and Japan 47·8 per cent. Notable progress has been made through the International Labour Organization in securing the abolition of night work for women and children but much still remains to be done along these lines. The Convention of the International Labour Conference prohibiting the employment of persons under fourteen is now in force in twenty-seven countries, while twenty-eight countries have adopted the International Labour Conference's Convention on weekly rest.

Coming to hours of work, the Director said that a Draft Convention to limit working hours in the textile industry to forty per week will come before the International Labour Conference in Geneva in June of this year for final consideration.

An opportunity for conference between those vitally interested in textile manufacture was not likely to recur in the immediate future and the Director felt confident that the present meeting would prove to be a landmark in the history of this industry.

Other Addresses before the Conference

Subsequently addresses were delivered before the Conference by the Honourable Cordell Hull, United States Secretary of State, the Honourable H. A. Wallace, United States Secretary of Agriculture, and by Mr. Edward F. McGrady, United States Assistant Secretary of Labor.

Mr. Hull pointed out that there are few industries whose welfare is more dependent upon favourable conditions of international trade than the textile industry. In the field of textiles, practically no country is self-contained. Even those countries most favoured in the availability of natural resources are dependent upon others for their supplies of raw materials. The principal raw material countries, on the other hand, are equally dependent on foreign markets if they are to attain the full benefits of their own comparative advantages. In recent years increased tendencies towards national economic isolation, as evinced by greatly enhanced barriers to trade, have produced far-reaching dislocation of trade and have created obstacles to orderly and constructive economic activity. The United States, while making every effort to improve economic conditions by all appropriate measures, had also been engaged during the past three years in a practical program directed towards the restoration of mutually profitable international trade. By means of trade agreements, the United States had sought to bring about a reciprocal relaxation of excessive trade restrictions and to establish the rule of fair dealing and equality of treatment in international commercial dealings. This movement is gathering momentum in many parts of the world. A liberalizing of policies and practices in international trade is vital to the permanent improvement of the textile industry; moreover, the rebuilding of sound and healthy trade relations among the nations has other and much broader implications. Economic recovery is essential to the preservation of durable peace and there would be far less social and political unrest in the world to-day if economic conditions were adequately improved. Both durable peace and the economic well-being of the world require wholehearted co-operation among nations and among groups with common interests and common objectives. The World Textile Conference was, he said, a fine instance of such co-operation.

The Hon. H. A. Wallace, United States Secretary of Agriculture, declared that there are probably few cases where the welfare of the farmer and of the industrial worker are so closely associated as they are in the case of the cotton grower and the textile worker

of the United States. Cotton is grown on two million farms in the United States, supporting nearly ten million people, or about one-third of the farming population of the country. Both cotton growers and textile workers are interested in a larger volume of output for the cotton textile industry and desire a higher standard of living for the combined cotton growing and manufacturing industry. The cotton producers' problem is complex and for that reason a large and varied program was necessary to cope with it.

Mr. Edward F. McGrady, United States Assistant Secretary of Labor, stated that the composition of the Textile Conference and its purpose represented a milestone in international affairs. International assemblies of employers to discuss the problems of a specific industry were not unique, nor was there anything abnormal in international gatherings of workers. Such meetings, however, had as their ultimate purpose the furthering of the interests of particular groups. In this Conference, the interests of all three forces of the economic world were represented —employers, workers and governments—and it was only through common action, forged out of the divergent interests of these three groups, that industrial progress and social justice could be attained. The policies of the United States Government were designed to provide a greater measure of social justice and opportunity for all men to receive a more assured and sufficient livelihood. The need for a more sufficient livelihood exists in every section of the globe. In some quarters, there is a disposition to think that there is a high standard of living in the United States. The facts, however, show that "we in the United States have far to go before there becomes available to a large portion of our population those essentials which are necessary to a standard of living consistent with the potentialities of the natural and technical resources of modern civilization."

In closing, Mr. McGrady gave particulars of the earnings and expenditures of typical working-class families in the United States and dwelt on the need for more adequate purchasing power on the part of the middle and lower wage groups.

Following the introductory proceedings, the first ten plenary sessions of the Conference from April 2 to 9 were devoted to a general discussion of the various aspects which directly or indirectly may have a bearing on the improvement of social conditions in different branches of the textile industry, in which a number of the Government, employers' and workers' representatives participated.

Address of Canadian Workers' Delegate

Mr. P. M. Draper, the Canadian Workers' Delegate, addressed the Conference on April 5th. In opening, he referred to the intimate social and economic relationship existing between the United States and Canada and observed that in the development of the friendly relations between the two countries, the movement of the workpeople he represented there had been of material assistance.

In dealing with the scope of the present conference, Mr. Draper pointed out that the social conditions are an index of progress and a yardstick by which to measure variations between one country and another. Continuing, he set out certain general principles of chief importance to the workers of Canada, stating that the recognition of these principles would give a greater measure of fairness to the treatment of the employed and would lay the foundations for international accord in textile matters:—

Interests of Canadians

"There are now 63,000 workers employed in the primary Textile Industry in Canada, and these workers are producing almost entirely for their home market—the export of semi- or fully-manufactured textiles from Canada being so negligible that they do not appear in the tables of Part 2 of the White books. The exports of semi- or fully-finished textiles were only one per cent of the value of the total exports from Canada in 1935. Consequently, an ever-increasing number of Canadians have a primary interest in the Textile Industry—as workers in the employment it affords, or as producers of the Canadian raw materials the industry consumes. To these people the social conditions which the industry creates or promotes are of essential importance, and here is introduced the question of competition from abroad with its effects on our domestic production, and upon those social conditions associated with the Canadian industry. Here it becomes of consequence to us that we should not have the scale of living which our own industry would give normally worsened by competition from any quarter where the industry does not aim at giving an equal standard to those employed, and conversely it becomes our interest to give what we may of co-operative thought towards assisting in standardizing upward, both as regards our own and other countries, the welfare of textile employees, so as to place international competition on a fair footing.

"The interest of Canadians in the textile industry is not confined to the interest of the producer. We have a vigorous climate, and one that necessitates an abundance of warm clothing—especially woollens—to clothe our population, particularly in the winter time. Our native textile industry is not able to supply completely the domestic demand, and further our domestic primary producers are not able to fully supply the raw materials needed for our Canadian textile factories. Hence, we are sizable importers of both raw materials and finished textiles, and from this aspect we require for our consumers a sufficient supply of such classes of these commodities as we must import. But the workers of Canada, as a large class of consumers, have some interest in co-operating with the workers of other countries to see that the lines we import are produced under fair conditions. This secondary interest makes the Conference of added importance to Canadian workers.

Right to Organize

"The first phase of conditions in the textile industry is that of the right to organize on the part of the employees, whether in primary or secondary branches of the industry, in order that the wage earners may adequately provide means of securing for themselves a standard of living consistent with that obtaining in other industries in the same country and consistent with that provided by the same industries in other countries. It is of first importance that employees have the right to organize themselves into free trade unions, organizations with liberty to pursue the destiny of their members, under the laws of the land, but without interference of a kind calculated to fetter the progress of the workers. A first step towards international standardization is this right to organize, recognized by national laws in each country, and supported by law where protection against the opposition of capital may be necessary. This right needs more to support it than a mere pious declaration; it must be real and actual and fairly uniform throughout all countries in order to let the unions work out their own salvation. Half measures are not effective. Given the right to organize as here suggested, with legal support, trade unionism may be relied upon to furnish the first factor tending to stabilize conditions in the textile industry. Without it, the bargaining strength of the workers will be weak, wages will suffer as a result, and the equilibrium necessary in world competition will be destroyed.

Question of Wages

"It is to be anticipated that the Conference will give some thought to the question of wages and it is not proposed to here deal with the rates obtaining in Canada—statistics on that subject will be available for study. But the wage question introduces several issues which are so closely related as to be almost inseparable. From the practical standpoint, we must consider the general standard of wages prevailing in each country, with a view to determining whether textile wages are in fair proportion to those paid in other industries. Then we must give some attention to the productivity of the textile trade in the various localities; some attention to how far mechanization has proceeded, in order to see whether the wages paid in one country, though less or more than in another, correspond with those paid elsewhere when related to a given quantity and value of product. This is a very important item, especially as the introduction of machinery since the Great War has revolutionized so many industries. Other conditions surrounding a comparison of wage levels will arise, but the two here mentioned are among the most important and certainly no valid conclusions can be reached on the entire comparative wage question without these two being settled, at least tentatively.

Hours of Work

"Although Canada has ratified the Convention on limitation of hours of work in industrial undertakings, the terms of the Convention are not in force throughout Canada as the regulation of hours of work is still a matter of provincial jurisdiction. Ninety per cent of primary textile workers in Canada are engaged in establishments in the provinces of Ontario and Quebec, and the greater part of the remainder are in the Maritime Provinces. The normal hours of work in the Central Eastern provinces are therefore of major significance in the Canadian textile industry. The operating periods for textile mills in Canada are nine hours to ten hours per day, for the day shift; and for the night shift, on which men alone are employed, are ten to twelve hours five nights per week. The normal working week is between fifty and fifty-five hours for workers on day shifts, and fifty to sixty hours for men on night shifts. The normal hours of work as reported to the Dominion Bureau of Statistics for the year 1935 were 51·6 hours for all primary textile industries in Canada, ranging from 49·6 hours for the knit goods and hosiery industry to 52·9 for the cotton yarn and cloth industry. The actual hours of work per week vary above and below the normal work week, depending on the level of activity in the industry. The organized work-people of Canada for whom I am speaking are strongly in favour of a reduction of the hours of work in the textile industry to forty per week without any reduction in their earnings.

International Competition

"It is to be expected that international competition will prove an absorbing topic to the Conference, and it is one which the workers' delegates, as well as the government and employers' delegates, will wish to study closely. The three topics here mentioned, namely, the right to organize, the wage question and hours of work, are intimately connected with international competition, particularly so in the case of the wage question and hours of work. But it may be assumed that the questions of tariffs, quotas, export combines, and the like, will also arise under the heading of international competition. It would be better, perhaps, that the main question involved should be the subject-matter of consideration in the first instance by governments and employers, though the workers are as deeply interested in the final analysis as are the two other groups.

"In a country like Canada, still busily engaged in building up industries, one may expect to find a more restrictive view on the subject of the international exchange of goods, so that it may be well to attempt to summarize the views of Canadian labour on this subject of the inward flow of raw and manufactured textiles. Canadian labour has been slow at all times to take sides officially in the discussions which have raged on high and low tariffs but it has felt that once industries are established, once men and women are put to work in them, it is a most serious matter, and one of purely domestic concern to each country, if these industries are later to be crowded out of the home market. Perhaps the views of the workers the world over would not differ in this statement of the case. But Canadian labour has at no time encouraged action to exclude competitive goods in order that the home market might be unduly exploited, nor has Canadian labour failed to realize that alongside domestic products in the textile line—whether primary or secondary—there is room for the products of other countries, and our annual imports show this admission in practice.

Address of Canadian Government Delegate

Mr. Gerald H. Brown, the Government Delegate for Canada, addressed the Conference on April 6 as follows:—

"Speaking on behalf of the Government delegation from Canada, I should like to mention first that during the past year a Royal Commission appointed by the Federal Government has been making a comprehensive survey of all the labour problems of the textile industry. In connection therewith, public hearings have been held in the principal centres in which the manufacture of cotton, wool, silk and other branches of the textile industry are carried on, so that an opportunity has been afforded both to the workers and to the employers to state their case. The hearings together with the argument, before this Royal Commission were concluded very recently. The findings of the Royal Commission have not as yet been submitted to the Government, but the report is awaited with widespread interest and the findings will doubtless have considerable influence on public policy in Canada. Naturally, this Tripartite Technical Conference on the Textile Industry convened by the International Labour Organization, is one of great interest to us at this particular time when we have so recently completed a searching scrutiny of our domestic problems. Canada is represented, therefore, at the present Conference by a government delegation and by delegations selected in consultation with organizations of employers and of workers. Under the federal system of government existing in Canada there is a division of legislative authority between the central parliament and the respective provincial legislatures; the government delegation in attendance here accordingly includes representatives of the two largest industrial provinces, namely, Ontario and Quebec.

"The division of authority in respect of labour matters, referred to, has led to differences of view as to the jurisdiction of the federal parliament to give effect to some of the I.L.O. conventions. I do not propose, however, to enter into this subject here, having in mind the well known saying that 'qui s'excuse s'accuse.' Moreover, Mr. Draper, the workers' representative from Canada, has already dealt with this aspect and it is unnecessary that I should add anything to what he has said on this point.

"As regards the question of working hours in the textile industry, a questionnaire issued by the International Labour Conference last year on the subject of the 40-hour week in this industry was communicated by our Federal Government to the respective provinces of Canada and replies from six of the nine Provinces, including the Prairie Provinces, in which very few textile plants are located, have been sent forward to Geneva. It may be of interest to those here present for me to say that the replies of the large industrial Provinces of Ontario and Quebec in which the textile in-

dustry is mainly centred, both favour the adoption of a single draft convention covering textile works of all kinds.

"I might add that these two Provinces have given affirmative answers to a further question which was put to them in the terms following: 'Do you consider that hours of work should be limited to 40 per week?' The answer of the Province of Ontario was 'Yes.' The answer of the representative of the Province of Quebec was, 'Yes, but as the working week in the Province of Quebec is 52½ hours in the large industry and 55 hours in the small industry operating in rural centres, I consider that as a first step hours of labour should be reduced to 44 per week; that is, 8 hours per day for the first five working days of the week and 4 on Saturday.' The provincial government of British Columbia in its answer to the questionnaire has observed that while the textile industry is not a factor in the industrial life of that province they express their endorsement in principle of the proposal contained in the questionnaire as being in line with legislation already enacted by British Columbia.

Minimum Wage Legislation

"In regard to wages matters, I am asked by the representatives of the Provinces of Ontario and Quebec to state that in both these Provinces measures are in contemplation to provide for the introduction of minimum wages for male workers in industry and commerce, in addition to the systems of minimum wages for female workers which have been in force for many years past. In Ontario, the legislation to permit of the establishment of minimum wages for male workers has already been adopted within the past month and we are given to understand that corresponding legislation for the Province of Quebec will be introduced during the present session of the legislature of that province.

"Let me add that, apart from Ontario and Quebec, most of the other provinces have laws on their statute books authorizing minimum wages and maximum working hours for both male and female workers in various branches of the industry.

"By reference to the White Report issued in advance of the present meeting, I observe with much pleasure that in a computation of wages in the textile producing countries, reduced to a common gold basis, Canada is bracketed with the United States in the highest scale of all.

"Perhaps I should mention as well for purposes of general information that in Canada night work for women and girls is prohibited by law, and that like action has been taken to prevent the employment in industry of children of tender years.

"Apart from the foregoing observations, which relate in the main to matters of statutory regulation, there is a notable increase taking place at present in labour organization in the textile industry in different parts of the country and, indeed, it is not too much to say that union membership in Canada is larger to-day than has been the case at any previous stage in the history of the textile trade in which approximately 63 thousand persons are employed."

Address by Canadian Employers' Delegate

Mr. H. G. Smith the Canadian Employers' delegate addressed the conference on April 7 in the terms following:—

"As the employers' delegate from Canada, I appear before this Conference with great interest since this is the first time the primary textile industry of Canada has been directly represented at such a gathering.

"Canada, a country of just over eleven million people, occupying the northern half of the North American continent, has its population spread over a narrow area bordering the United States for three thousand miles. Partly as a result of its contiguity to the United States, and partly because of the character of its people, it has a standard of living which approximates to that of the United States.

"The textile industry is not a new industry in Canada. It had its origin in the pioneering days of French occupation. But it has kept pace with world developments in mechanization and in methods of management, and now provides employment for 63,000 workers, or one in ten of all those gainfully employed in manufacturing industries. The industry manufactures cotton, wool, silk and rayon and many of its mills will stand comparison with the best of any other country.

Textile Market

"Exports of textiles produced in Canada are negligible and the total hours of work per year available to our textile workers may be said to depend entirely on the volume of consumption of textiles in Canada, and the share of that volume the Canadian industry can obtain. Not only is the total market relatively small, but part of that market is supplied by countries which export textiles. Canada's export trade is principally in products of the farm, mine, forest and fisheries, and the volume of textiles

the workers in these activities can buy is determined by the relation of textile prices in Canada to the general price levels in Canada. The share of this volume which is obtained by the domestic industry depends on the price of Canadian produced goods in relation to the laid down costs of imported goods. During recent years the trend of textile employment in Canada has been steadily upward, the gain from 1930 to 1936 being 26 per cent, and there is practically no textile unemployment in Canada at the present time. However, as the conditions under which the industry competes with its principal competitor have been recently changed, it is too early yet to forecast employment trends for the next two or three years.

Wage Levels

"In regard to wages textile workers in Canada are bracketed with those in the United States as the highest paid in the world. Furthermore the average weekly earnings of females in the primary textile industry in Canada are higher than the average weekly earnings of females in all other principal industries.

"In order to give the Conference some idea of the level of textile wages paid in Canada, and as British wages are grouped in the highest class outside the North American Continent, I am quoting from a Canadian Tariff Board Report as follows: 'It has been established that hourly wages in Canada exceed those paid for corresponding occupations in the United Kingdom by 55 to 60 per cent in the woollen industry, 76 to 78 per cent in the worsted spinning industry, and 65 to 75 per cent in the worsted weaving industry.' The evidence before a Royal Commission on the Textile Industry was that hourly wage rates in the cotton industry in Canada are over 60 per cent higher than the hourly wage rates in Great Britain, and that, generally speaking, the wages in Canada for females in February, 1936, were as high as those in Northern United States mills immediately previous to the N.R.A., and definitely higher than in Southern United States mills.

High Manufacturing Cost

"Manufacturing burden is relatively high as compared with the principal exporting countries, owing to the level of wages paid in Canada for all the labour and services that enter into overhead costs. Our northern climate with its extremes of temperature affects costs of production by virtue of the substantial factory construction required and of the extra cost of fuel needed to take care of Winter heating loads which are superimposed on the processing steam requirements. This same condition, applies, of course, to the Northern United States and certain other countries.

"It appears to me that the problem facing our workers and manufacturers is to produce textiles at prices which will ensure the largest volume possible and to produce at such prices as, under existing tariffs or tariffs which may be imposed in the future, will enable us to retain a major share of our domestic market in competition with countries exporting textiles.

"Since the beginning of the present century—and I speak of that period because it comes within the limit of my personal experience—there have been great technological improvements in all branches of the industry in Canada. These have resulted in increasing the productive capacity of each worker in the industry, reducing cost and improving quality. The gains resulting from this increased efficiency have been largely passed on to the worker in shorter hours worked per week and increased annual earnings, the consumer also benefited by reduced prices and improved quality, while I doubt whether returns to capital are as great as they were 37 years ago.

"In support of these statements, the evidence before the Royal Commission on Textiles shows that the average per year of real wages in the cotton yarn and cloth industry was $702 in 1926, $727 in 1930 and $912 in 1934, and in the hosiery and knit goods industry $728 in 1926, $725 in 1930, and $841 in 1934, while the financial returns for a period of ten years ending 1935 covering approximately two-thirds of the whole primary industry, and that the most sucessful portion, showed an average annual return of 4·8 per cent on the net assets employed.

"While we are open to conviction, and while we are anxious to do everything in our power to improve the social conditions of the workers in our industry, we are not as yet clear what effect a reduction in hours of a substantial nature would have on those engaged in our industry, either as employers or employees. There is nothing in the proposal which would conceivably increase the productivity of the textile workers or the incomes of those engaged in farming, mining, lumbering and fishing. Hence, if the result was to increase costs and selling prices of textiles, it would mean that the gain made by one class of worker would be taken from another class of worker. The effect of this might be to reduce the volume of our products consumed in Canada, and therefore be to the detriment of the textile workers. We also question whether the establishment of a 40-hour week throughout the world would not result in increasing the present disparity of costs between high and low-wage countries and weaken our competitive position.

Social Conditions and Productivity

"We also desire to know if the natural aspirations of textile workers for improved social conditions, whether represented by shorter hours or higher earnings, can be achieved in the higher wage countries otherwise than by increasing the productive capacity of the worker through improved machinery and methods, taking into account the price factor in relation to international trade and consumer purchasing power. If the Conference concludes that this can be done, we feel that the means by which this is to be accomplished ought to be fully demonstrated. Ontario and Quebec, the two Canadian Provinces in which 90 per cent of the textile industry is located, have recent legislation which encourages collective bargaining. Legislation has been enacted by the Province of Ontario, and similar legislation is being drafted for Quebec, for minimum wages for men. These Provinces established minimum wages for women some years ago and over a period of time have made considerable social advances and have the employers behind them. We suggest that great and sudden changes are dislocating to business, and that forward movement, to be sound, should be one step at a time, so that the effect can be tested out, and industry and the country can adjust itself.

"I have spoken so far of the textile industry in general but now I propose to say a few words concerning one branch in particular: the knit goods industry. It differs from the other primary sections in that its product is largely delivered to its customers in complete form ready for direct use by the customer. It therefore is a complex industry in that it is both primary and secondary. It can very well be argued that it does not properly come within the scope of this study because of the fact that it is to a substantial extent a needle trade. It competes with pure converting establishments which buy knitted cloth which is cut and sewn into finished garments. As such, they are not open to regulation by any action which may result from recommendations made by this Conference."

Closing Proceedings

From April 9 until April 16 the Conference met daily in Committee of the Whole and the proceedings were brought to a conclusion on April 17 by the unanimous adoption of reports on the social and economic aspects of the textile industry and the need for fuller statistical information. (Summaries of these three reports are appended to the present article.)

The closing proceedings included addresses by Miss Frances Perkins, U.S. Secretary of Labor, and by Mr. William Green, President of the American Federation of Labor, both of whom congratulated the Conference on the notable success which had been achieved in its work; also by Mr. Harold Butler, Director of the International Labour Office, and Mr. E. J. Phelan, Assistant Director of the International Labour Office, who dwelt on the success which had been achieved by collaboration between all the groups responsible for the destinies of the textile industry.

The Honourable John G. Winant, President of the Conference, in summing up its results, asserted that the findings which are recorded in the reports on Economic and Social Problems and on Statistics in the Textile Industry were not predetermined but were the result of honest enquiry and the collective experience of those who participated in the Conference. The ultimate value attaching to them would, he stated, depend on the use which was made of them. The machinery was at hand both at home and abroad. The will to act would, therefore, measure the social progress which was to follow. "Ours," he said, "has been a unique experiment. For the first time in the world's history representatives of workers, employers and governments have come together from many nations to discuss, with the informality common to a New England town meeting, the every-day business of an occupation centuries old, employing a substantial percentage of the world's industrial workers, with a single purpose of trying to understand its social impact on the lives of those dependent on it in a modern world. . . . Scientific equipment and secretarial proficiency have overcome the barriers of language and good will has permitted us to reconcile conflicting interests in a common desire to seek truth that we might profit by it in the larger experience. . . . . In the great wealth of information that has been accumulated, two conclusions stand out: governments singly within their own borders, and governments severally through co-operative action, must share responsibility with employers and workers if we are to find greater security for investors and workers in the textile industry.

Report Adopted by the Conference on the Social Problems of the Textile Industry

During the preliminary discussion which occurred at the first ten plenary sittings of the Conference, many references were made to the social aspects of the textile industry. Sub-

sequently the Conference resolved itself into Committee of the Whole to consider this particular aspect, the following agenda being adopted for consideration of the social problems of the textile industry:—

I. Methods of regulating conditions:
Collective bargaining and agreements.
Legal enforcement of agreements.
Minimum wage machinery.

II. Hours of work and wages in relation thereto:
Working week and overtime.
Shift work.
Night work.
Rest periods and holidays—weekly rest, annual holidays with pay.

III. Health and efficiency:
Number of machines per worker.
Employment of children.
Health and safety.

IV. Social services:

The discussion revealed a striking consensus of opinion among Government, employers' and workers' representatives states the report, as to the necessity and value of collective negotiation and agreement concerning conditions of employment. It also evoked a number of valuable suggestions, based on practical experience, as to the desirability of reinforcing the system of collective negotiation and agreement by the intervention of the State. By coincidence, this discussion took place on the day when the United States Supreme Court gave judgment upholding in five cases the constitutionality of the Wagner Labor Relations Act, and when in Great Britain an Order of the Minister of Labour came into force giving compulsory legal effect, under the Cotton Manufacturing (Temporary Provisions) Act, 1934, to voluntary agreements entered into by the employers' and workers' organizations in a section of the British cotton industry. This coincidence emphasized the practical character of the discussion.

Agreement on Collection Bargaining.—In connection with the general agreement which was reached as to the principle of collective bargaining, it was pointed out by several speakers that the efficacy of the regulation of conditions of employment by this method depends on the effectiveness of the organization on both sides, and that to secure the general and strict observance of agreements, supplementary action had been shown by experience to be necessary. In the absence of such supplementary action, parties to agreements had in practice found their intentions defeated by the non-compliance of persons who were not members of, or subject to control by the organizations negotiating the agreement. Steps had therefore been taken in various countries to extend agreements concluded voluntarily between employers' and workers' organizations so as to make them apply compulsorily to all employers and workers in the particular field covered.

Hours of Work.—The discussion in Committee of the Whole concerning hours of work in the different branches of the textile industry revealed a much wider divergence of view than occurred in respect of the question of collective negotiations and agreement. The United States' delegation rendered material service to the Committee by furnishing detailed statistical analyses of some of the results of the introduction of the 40-hour week in textile undertakings. The first statement, submitted on behalf of the Employers' delegate of the United States, concerned costs in a typical undertaking during a 6-year period in which working hours were 55 a week and during the last three years since hours were reduced to 40 a week.

The possibilities of improvements in production were also stressed in a second statement furnished by the U.S. Government delegation, based on a study which had been made of technological progress in a number of cotton mills. The employers' representatives of other countries, however, were not prepared to accept the experience of the United States in these matters as conclusive.

International Competition.—The question of foreign competition, and particularly competition between Western and Oriental countries, was discussed at considerable length. It was stated that in Japan the actual hours of work in cotton spinning and large scale weaving factories are 8½ per day with a weekly rest. In silk reeling, which employs 330,000 workers—more than cotton spinning and weaving combined—the hours of work are generally 10 a day, with two rest days a month. This, however, is a seasonal industry and the number of working days in the year is only about 250. Rayon yarn production employs 72,000 workers. Of this total, 28,000 work on continuous processes and 95 per cent of those work on a three 8-hour shift basis. Of the remaining 44,000, employed on non-continuous work, 99 per cent work from 7 to 9½ hours a day, 8½ hours being the average, and only one per cent exceed 9½ hours a day. Night work of women and young persons has long been prohibited. The proportion of young persons employed has also been substantially reduced, having fallen from 13 per cent in 1921 to 9 per cent in 1932. It was contended that the dormitory system was necessary, and indeed desirable, in the special conditions of Japan. The girls spend only a few years in the factories after leaving the primary school—in a typical case, 86 per cent of the girls worked for only 2 years; only

10 per cent for more than 2 years, and the rest for more than three years—and in many respects their way of life, apart from their work in the factory, might be compared with that of girls in a boarding school.

As regards China, the Chinese workers' delegate stated that there are 500,000 workers in modern textile factories, three-quarters of whom are women and children. Hours of work are very long, an 11 hour day and 66 hour week being common, and wages low, the pay received by a Chinese worker for an 11 hour day being only 60 Chinese or 18 United States cents. An especially important feature of the situation in China is that 46 per cent of the Chinese textile workers are employed in factories owned by foreigners. As will be seen later in this report, the Committee devoted special consideration to the problem of foreign undertakings in China.

In India there had been considerable reductions of hours of work in recent years. The working week, which at one time was 72 hours, had been reduced first to 60 hours and then, since the beginning of 1935, to a legal maximum of 54 hours. From 1931 to 1935 the jute manufacturing industry voluntarily worked on a 40-hour week basis and to-day, according to the statement of the Indian Employers' delegate, it is mostly on a 48-hour week basis, though it still has to contend with serious difficulties.

Apart from the question of the shorter working week, an informative discussion took place on the question of shift working and night work. There appeared to be general agreement that where the shift system was introduced the duration of the shift should be shorter and that a maximum working week should be fixed. Further, strong opposition was displayed by the Workers' representatives to night work by women and young persons.

As regards wages, if the intentions of those who advocate the shorter working week are to be realized, it was indicated that the reduction of hours of work must be accompanied by the maintenance of weekly earnings.

The attention of the Conference and of the Committee was drawn to the anomalous situation existing in the textile industry in China. It was pointed out that during the last twelve years the Chinese imports of textiles have been reduced by about two-thirds. The textile mills in China were more and more fulfilling the requirements of the Chinese markets at the expense of other textile-producing countries. Nevertheless, 45 per cent of the Chinese production was in the International Settlements where it was not subject to Chinese jurisdiction.

Summary of Report

The following summary is taken verbatim from the report of the General Committee on the Social Problems of the Textile Industry:—

"It will be seen that the discussion by the Committee of the social problems of the textile industry covered a wide range of subjects, furnished an occasion for a very useful exchange of information and views and evoked a considerable number of interesting suggestions. The principal features of the discussion may be briefly summed up as follows:—

1. Voluntary organization of employers and workers in the textile industry for the purpose of joint consideration and settlement of conditions of employment by means of collective agreements is of very great value and should, therefore, be encouraged.

2. Nevertheless, collective agreements do not always afford adequate safeguards for the effective regulation of working conditions and the establishment of a basis for fair competition between all employers. The end desired may be more surely attained by the enactment of legislation in the national sphere and the adoption, ratification and effective application of international conventions.

3. The information that has been made available and the exchange of views that has taken place at this Conference have served to throw light upon the problems arising in connection with the reduction of hours of work in the textile industry, the practicability of and the necessity for which were urged by all the workers' representatives and by certain Government and employers' representatives. On the other hand, other employers' and Government representatives urged that the reduction of hours of work was impracticable. It will be for the International Labour Conference which will meet in June next to come to a decision upon the question of the adoption of a Draft Convention on this subject.

4. Shift working in the textile industry raises special problems. The experience of responsible leaders of the industry both among employers and among workers suggests that night shifts should be resorted to only when required as a matter of strict necessity. Where two daytime shifts are worked with a working week of 48 hours or more, a reduction of the length of the shift should be considered.

5. Night work by women and young persons should be absolutely prohibited. It would be desirable if those States which have not yet ratified the existing Conventions on this subject would give further consideration to the possibility of ratification.

6. The Conventions relating to the weekly rest and to annual holidays with pay likewise merit serious consideration by Governments with a view to ratification.

7. Where measures of rationalization are introduced, the risk of excessive fatigue due to the intensity of the effort called for from the worker and the conditions under which the work has to be performed require careful consideration, and every effort should be made to secure, by agreement between the employers, and workers' organizations, such adjustment of work assignments as will take account of the human needs of the workers as well as of the economic requirements of the undertaking.

8. It would be useful if the International Labour Office could make available, in a form readily accessible to all parties concerned, the results of studies of the problems of fatigue, health and accident prevention in the textile industry, as affected by such matters as lighting, posture, temperature, atmospheric conditions, seating accommodation, lifting of heavy weights, dust, etc.

9. It is desirable that a minimum age should be fixed by law in all countries for the admission of young persons to employment in the industry. In this connection the attention of the Governments might usefully be invited to the desirability of giving consideration to the ratification of the Minimum Age (Industry) Convention, 1919, and of any revised Convention on this subject which may be adopted by the International Labour Conference in June next.

10. It is desirable, in the general interests of the textile industry as a whole, that the International Labour Office should renew its efforts to bring about a solution of the problem of the regulation of labour conditions in the International Settlements in China."

Report Adopted by the Conference on the Economic Problems of the Textile Industry

The report on economic problems adopted by the Conference was based on the consideration which was given to these matters during the general discussion which occurred at the first ten plenary sessions of the Conference, also on the further examination of the economic problems which was made subsequently at three successive sittings of the Conference meeting in Committee of the Whole. The discussion at the three last mentioned sittings was conducted on the following basis:—

I. Consumption

(*a*) Consumption Needs:
- I. Agricultural population.
- II. Industrial population.

(*b*) Consumption Expansion:
- I. By increasing purchasing power.
- II. By reducing prices — Is price reduction inconsistent with higher wages or better standards?
- III. By the effect of changing fashions and the shifting of consumption.

2. Production and International Trade

(*a*) Existing Situation:
- I. Changing distribution.
- II. Restriction of production
  - (*a*) By internal action for reducing excess capacity or limiting output.
  - (*b*) By restriction on international trade (Tariff quotas; gentlemen's agreements, etc.).
  - (*c*) Exchange restrictions.
  - (*d*) Raw materials.
- III. Export subsidies, direct and indirect.

(*b*) Remedial Possibilities:
- I. Conditions of "fair competition" as an aid for lowering barriers.
- II. International agreements as means toward adjusting production and consumption of different textile products.
- III. Possibility of improving international organization dealing with above problems.

Mr. Wisselink (Government Delegate, Netherlands), in submitting the report on Economic Problems, which was adopted by the Conference, was convinced particularly of two facts, viz: That the improvement of social conditions can only be achieved or maintained if the economic basis of an industry is sound, and that social desirabilities can therefore only be discussed within the boundaries of economic possibilities. If social workers leave this basis, it can only cause disappointments, which any man or woman with a sound sense of social responsibility cannot want. The second fact is this world-wide international entanglement of all economic and social conditions in the textile industry.

There was no question in the Conference or in the General Committee that the end of their deliberations was the improvement of economic and social conditions in the textile industry on a world scale. Various members of the General Committee stressed the fact that the restoration of a healthy condition in the textile industry is closely related to economic improvement in general and to the progressive rise of living standards in all countries. It was underlined that the chief reason for the slow increase in the consumption of textiles during the past decade or so has been the insufficiency of income of the mass of the people. The conclusion was drawn from this that in order to expand the consumption of textile products it is necessary to increase mass purchasing power and to find ways and means of raising standards of living.

Purchasing power.—The speakers before the Conference and the Committee were agreed that a material increase in mass purchasing power which would raise consumption levels would help to remove many of the obstacles now in the way of improving social conditions in the textile manufacturing industry. At

the same time, several of the speakers pointed out that where demand was elastic, as in the case of textile goods, consumption might be discouraged by ill-considered increases in the cost of production leading to an advance in sales prices.

Some divergencies of opinion, and of emphasis, appeared in the formulation of methods for expanding purchasing power. Workers' delegates maintained that the best formula for expanding purchasing power was to raise wages and increase labour earnings. They argued that wages were only a small share of the total costs of production in textile manufacturing, so that the resulting cost increases, if any, would be moderate. They further argued that the limits of improved efficiency and productivity in textile manufacturing were far from reached, so that considerable possibilities still remained for raising wages without advancing manufacturing costs.

The majority of the employers' spokesmen were of the opinion that the most appropriate method of enlarging purchasing power was to lower the sales prices of textile goods. They contended that measures such as a shorter working week, with maintained weekly earnings, would operate to force production costs upward and should be avoided. In this connection stress was laid both on the substantial ratio of labour costs to total production cost, and on the pyramiding of higher costs from one manufacturing process to the next.

An orderly expansion of the textile industry, however, was held to depend upon an orderly development of international trade in textiles. In the course of the discussion repeated references were made to the fact that most countries must export either textile raw materials or textile manufactures or both, and that few countries do in fact consume the total output of their textile industries.

In considering the relationship between newer and older textile areas, it was generally accepted that the spread of the textile industry to new countries was inevitable and that on the whole it represented a means for improving the economic condition of the world. The desirability of a balanced growth between the textile industries of different countries and regions was thus indicated. It was in this connection especially that the importance of labour standards was emphasized. It was maintained that the wide disparities in labour standards were largely responsible for the strains in international competition and for the restrictive commercial policies adopted by high wage countries against the countries with lower wage standards.

Many members of the Committee stressed the view that competition should not work itself out by the lowering of labour standards. It was pointed out that no area of the world could expect to reap advantages from low-wage standards and excessive hours of work for very long, that such advantages were temporary in character and that the only way for permanent economic and industrial development is by means of a levelling up of labour standards everywhere.

Summary of Report

The summary following is taken verbatim from the report of the General Committee on Economic Problems:—

"That the economic problems of the textile industry, above all other industries, call for international action as the proper solution, is a point upon which all speakers agreed. The outstanding suggestions which have been advanced during the course of the discussion may be summarized as follows:—

1. That, in framing their commercial policies, Governments should take account of social conditions prevailing in countries with which they have trade relations, and in particular should bear in mind the standards set by international labour Conventions.
2. That, in the interests of enlarged trade as well as of improved social conditions, Governments should seek every opportunity to reduce unreasonable trade barriers.
3. That an International Tripartite Committee might be set up within the International Labour Organization to study measures necessary to achieve prosperity and social justice in the textile industry, or more generally to consider all the economic and social problems of the textile industry.
4. That the efforts now being made to co-ordinate the interests of producers and consumers of textile raw materials should be further pursued and further implemented, with particular emphasis on raising the suitability and accessibility of raw materials for the technical and economic requirements of the industry in order to improve efficiency and lower costs.
5. That Governments might contemplate the establishment of an International. Commission to consider production and prices in the textile industry as a whole. In this connection, it was said that greater balance in the world textile industry involves to a certain degree industrial planning on an international scale.
6. That minimum wage-fixing machinery and trade boards be established in countries where they do not exist to regulate wages and working conditions.
7. That efforts be made to raise the purchasing power of consumers in agricultural countries.

"The general sentiment of the Committee which seems to emerge from the speeches made

during its sittings is that the discussion of the economic problems of the textile industry by representatives of Governments, employers and workers which has been made possible for the first time in the present Conference has served a very useful purpose. It has enabled the difficulties which confront the industry to be more clearly visualized; the obstacles in the way to further social progress to be seen in their correct perspective. The large consensus of opinion expressed in favour of international action being taken with a view to overcoming these obstacles through diminishing the economic difficulties which are at present hampering the industry, suggests the necessity for the continuous consideration of the problems and policies of the industry and the desirability of creating the necessary instruments for that purpose."

Report Adopted by the Conference on Textile Statistics

In accordance with a decision of the plenary Conference, a Committee on Statistics, consisting of eighteen members (six from each group) was appointed. The Canadian representatives on the Committee of Statistics were Mr. A. S. Whiteley, as Government representative, and Major Douglas Hallam, as employers' representative.

Although the Committee expressed its appreciation of the high value of the statistics assembled by the International Labour Office and published in the Report presented to the Conference, it was found that the possibilities of international comparisons of social and economic conditions in the textile industry are greatly restricted by the wide disparities in the character of the data collected and published in different countries. The Committee found that deficiencies in the available data are especially marked in regard to the statistics of wages, hours of labour and other working conditions. The deliberations of the Committee were thus directed mainly to the deficiencies in the existing information and to the possibilities of indicating lines along which the future development of internationally comparable statistics relating to the textile industry might most usefully proceed.

The recommendations contained in the Report of the Committee on Statistics may be summarized as follows:—

1. That the Governing Body of the I. L. O. should consider the desirability of proceeding at an early date with an enquiry into wages and hours of labour for each of the principal branches of the textile industry. In 1931, a questionnaire was drawn up for the cotton and wool textile industries by a committee of the Governing Body but owing mainly to the abnormal conditions prevailing at that date, the enquiry was not instituted. The Committee on Statistics also recommended that further enquiries on similar lines should be made in each country at regular intervals, at least once in every five years, and preferably, once every two years.
2. That in each country, statistics should be regularly collected at intervals of not more than three months, showing for a representative sample of establishments in each of the principal branches of the textile industry (*a*) the total number of workpeople employed by the establishments; (*b*) the total amount of wages paid to these workpeople; and (*c*) the aggregate number of man-hours worked in a week or other customary pay-period. It was felt that such current data would serve to indicate the trends in hours of labour and earnings in the periods intervening between the more comprehensive surveys suggested in the first recommendation.
3. That the Governments of the principal textile producing countries should publish at regular intervals the fullest possible statistics as to employment and unemployment in each branch of this industry.
4. That the International Labour Office should continue the researches which it has instituted into working-class standards of living and relative levels of cost of living in different countries with a view to obtaining comparable data on these subjects and that for this purpose those countries in which representative family budget enquiries have not been made in recent years, should be urged to undertake such enquiries in the near future.
5. The Committee on Statistics regarded it as especially important that statistics should be made available showing the ratio of the total wages paid to the net value of production in the principal branches of the textile industry and recommended that the I. L. O., in collaboration with other competent international organizations, should endeavour to arrange for the collection, if possible, at intervals of not longer than two years, of data which will enable such statistics to be compiled for textile-producing countries for which such information is not now available.

A sub-committee on Economic Statistics submitted a report in the form of minutes of the discussion which had taken place. The deliberations of the sub-committee were divided into two parts, the first being devoted to the question of costs of production figures and the second to questions of statistics on trade and

production. A difference of view was found in the sub-committee on the question of the possibility of attempting to make international comparisons of unit costs of production for a very limited group of staple textile products. At the conclusion of the discussion the sub-committee noted the dissent of some representatives but recorded its conviction that a study of international comparisons in the cost of production of a limited number of typical textile products is both feasible and desirable. The second part of the discussion of the sub-committee on economic statistics was devoted to technical matters in the classification and enumeration of raw materials and manufactured textile products.

VOLUME 37] JUNE, 1937 [NUMBER 6

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

Industrial employment in Canada showed an increase at the beginning of May, according to returns received by the Dominion Bureau of Statistics from 10,089 firms, each employing a minimum of 15 workers and representing all industries except agriculture, fishing, hunting and highly specialized business. The working forces of these firms aggregated 1,011,474 persons, or 32,155 more than in the preceding month. The employment index (with the average in the calendar year 1926, as the base equal to 100) stood at 106·3, as compared with 103·0 at April 1, and 99·5 at the beginning of May last year. In the preceding fifteen years, the indexes for May 1 were as follows: 1935, 95·2; 1934, 92·0, 1933, 77·6; 1932, 87·5; 1931, 102·2; 1930, 111·4; 1929, 116·2; 1928, 106·8; 1927, 101·8; 1926, 95·4; 1925, 91·9; 1924, 92·9; 1923, 92·5; 1922, 84·3 and 1921, 85·1. The industrial expansion indicated at the latest date was on a scale rather greater than the average between April 1 and May 1 in the years, 1921-1936; the index of employment, after correction for seasonal influences, therefore, rose slightly from 109·2 in the preceding month to 109·4 at the beginning of May.

Unemployment in trade unions.—At the beginning of May, 1937, reports were furnished to the Department of Labour by 1,810 local trade unions with an aggregate of 188,887 members, 20,958 or 11·1 per cent of whom were unemployed, in contrast with percentages of 12·9 at the beginning of April, 1937, and 15·1 at the beginning of May, 1936.

Employment Office Reports.—Reports received by the Department of Labour from the offices of the Employment Service of Canada showed gains in the business transacted by those offices during April, 1937, when compared both with that of the preceding month and also with that of April, 1936, services, farming and construction and maintenance being the groups in which the highest gains were shown under the first comparison and logging, services and manufacturing under the second. Vacancies in April, 1937, numbered 30,168, applications 57,778, and placements in regular and casual employment 27,089.

Prices.—In retail prices the cost per week of a family budget of staple foods, fuel and lighting, and rent was $17.28 at the beginning of May as compared with $17.18 for April a slight decline in the cost of fuel being more than offset by increases in the cost of food and rent. Comparative figures for certain earlier dates are $16.36 for May, 1936; $15.97 for May, 1935; $15.41 for June, 1933 (the low point in recent years); and $21.49 for May, 1930. In wholesale prices the weekly index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 moved within narrow limits during May and was 85·1 for the week ended May 28 the same as for the week ended April 30. On a monthly basis the index number was 86·1 for April; 71·8 for May, 1936; 72·2 for May, 1935; 63·5 for February, 1933 (the low point in recent years); and 93·4 for May, 1929.

Business Statistics.—The latest information available reflecting industrial conditions in Canada is given in the table on page 594. The index of the physical volume of business based upon 1926 as 100 and adjusted where necessary for seasonal variation was higher in April continuing the recovery which commenced in March following a decline of several months duration. The figures for April were 120·5 as compared with 118·7 in March, 115·0 in February and 111·0 in April, 1936. Of the principal factors used in the construction of the index, manufacturing, trade employment and car loadings recorded slight decreases in the month under review as compared with the previous month while mineral production, imports and exports showed marked increases. Construction and electric power output also recorded advances. All of the above principal factors were higher in April, 1937, than in April, 1936, with the exception of exports. Information available for May indicates decline in wholesale prices, gross earnings of the Canadian National Railways, and in contracts awarded as compared with April but considerable increase over May,

*Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

†For the week ended May 29, 1937.

(1) Calculated from yields of Canadian bonds. (2) For group figures see articles elsewhere in this issue.

(3) Adjusted for number of business days and seasonal variations. (4) Figures for end of previous month.

(5) Figures for four weeks ending May 29, 1937, and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending May 22, April 24, and March 27, 1937; May 16, April 18 and March 21, 1936.

(7) MacLean's Building Review. (8) Index numbers are adjusted when necessary for seasonal variation.

1936. Employment and car loadings recorded increase in both the above comparisons.

Strikes and Lockouts.—The number of strikes and lockouts during May was 44, involving 10,225 workers and causing time loss of 56,920 man working days. The most important disputes were those involving dress factory workers at Montreal, P.Q., knitting factory workers at Toronto, Ont., and foundry workers at Sorel, P.Q. There were, however, nine other disputes each causing time loss of over 2,000 days but none of these involved more than 300 workers. In April, 1937, there were 38 disputes involving 13,097 workers, causing a time loss of 148,677 days, due chiefly to the strike of automobile plant workers at Oshawa, Ont., and to that of dress factory workers at Montreal carried into May. In May, 1936, there were only 14 disputes, involving 3,928 workers and causing a time loss of 28,712 days, due chiefly to a strike of loggers and sawmill workers on the coast of British Columbia. Of the forty-four disputes recorded for May, thirty were recorded as terminated, four resulting in favour of the employers concerned, nine in favour of the workers involved, while compromise settlements were reached in seventeen cases. Fourteen disputes, involving approximately 3,600 workers, were recorded as unterminated at the end of the month. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or definitely declared terminated by the unions involved.

Industrial Disputes Investigation Act

During the month, the Department has received a unanimous report from the Board of Conciliation and Investigation established to deal with a dispute between the Canadian Marconi Company and its coast station, ships' and transoceanic telegraphers. The text of the report is given in the section detailing recent proceedings under the Act, commencing on page

There were also three applications for the appointment of Boards under the Act.

Effectiveness of Collective Bargaining Emphasized by Minister of Labour

Speaking recently at Coaticook, the Hon. Norman McL. Rogers, Minister of Labour, in referring to industrial unrest, reiterated his belief in a clear recognition of the right of workmen to combine in any lawful organization for the promotion of their common welfare. He considered that experience in Canada and other countries had demonstrated the advantages of collective bargaining as an effective method of maintaining industrial peace.

In this respect he declared that "no government, corporation or individual should neglect any measure that might bring about an improvement in industrial relations," and that every effort should be made to settle disputes peacefully and without interruption to the country's productive machinery.

Statement of National Employment Commission on Price Increases

The National Employment Commission recently issued the following statement dealing with recent assertions that prices of building materials have been increased unduly to the detriment of the Home Improvement Plan.

"The National Employment Commission has noted in recent weeks items and editorials appearing in newspapers referring to increasing cost of building materials and deploring such alleged increases on the ground that they will retard recovery. In its capacity as sponsor of the Home Improvement Plan, the Commission is vitally interested in the success of the Plan and is definitely opposed to anything which might imperil that success. That fair dealing by all concerned is the only basis on which this success can be built is self-evident; and at this time it seems advisable to emphasize again the co-operative nature of the Home Improvement Plan.

"By co-operation between the Dominion Government and the banks, the Plan came into being. By the co-operation of public-spirited citizens right across the Dominion, it is being successfully promoted. By the co-operation of those who borrow and those who sell their materials and services under the Plan, it is becoming a great and beneficial factor in the recovery of Canada. Any partner in this co-operative movement, whether he be supplying material, performing labour, or having work done, who is guilty of abuse in any form, hurts the Plan and those who are working for it.

"The National Employment Commission recognizes the importance of restoring prices, which during depression years dropped unreasonably, to a fair level. That such recovery be made is important to the worker as well as to the employer. In cases where prices have fallen during periods of depression to points where it became almost impossible to continue production, it is only natural that they should swing upward with a return to normal conditions.

"Also, it must be remembered that factors which enter into certain price levels spring from Canada's position as an exporting country. The price of lumber, for instance, has advanced, because of export demands, until it is now slightly above the 1929 pre-depression level. Demands of armament manufacture abroad, as

well as of the automobile industry at home, tend to increase steel prices at home. Such products are in a similar position to wheat. Naturally, everyone is glad to see better wheat prices. Higher wheat prices mean a more prosperous farming community with money to spend on farm machinery and other necessities. Thus additional work is created.

"It has been gratifying to see that in general, particularly insofar as the wholesale price level is concerned, available figures do not indicate that there have been undue increases in prices for building products, as a result of activity in the Home Improvement Plan. According to the Dominion Bureau of Statistics, prices of building and construction materials at the end of March, 1937, stood at 97·3 as compared with 99·0 in 1929; painters' materials at 72·5 against 92·0; lumber at 104·5 against 103·5; and 'miscellaneous' at 96·5 compared with 96·3. Since the end of 1936 there has been some increase in all these classes.

"The National Employment Commission presented the Home Improvement Plan to the Canadian public as a nation-wide co-operative effort to assist in relieving unemployment. It is the hope of the Commission that Canadians will continue their co-operation, so generously shown thus far, until the Plan achieves complete success."

Federal-Provincial Youth Training Plans

In the April issue of the LABOUR GAZETTE, page 414, reference was made to the vote of $1,000,000 "to provide for development and training projects for unemployed young people." Since then, communications have been sent to all the Provincial Governments by the Federal Department of Labour, advising them of this vote and allocating a specific amount for each province.

This sum will be expended under agreements to be made with the Provinces upon a dollar for dollar basis, in the form of federal contributions to approved provincial schemes where such fall within the following categories: (a) training projects of an occupational nature, devised to increase employability; (b) short term learnership courses, to provide theoretical training along with employment; (c) work projects of a reconditioning or training nature to restore loss of morale and also conserve natural resources; and (d) training projects of a physical nature to help maintain health and morale.

These projects, open to young men or women, unemployed, but not necessarily on relief, are being considered by the provinces, and the federal Government awaits the submission of definite plans.

Mr. R. F. Thompson Appointed Supervisor of Training for Unemployed Youth

With reference to the establishment of unemployed youth, the Honourable Norman McL. Rogers, Minister of Labour, has announced the appointment of Mr. R. F. Thompson as supervisor of training projects for unemployed young people. To assume his new duties, Mr. Thompson has resigned as a member of the Youth Employment Committee functioning under the National Employment Commission (LABOUR GAZETTE, September, 1936, page 769).

Mr. Thompson is a native of Sarnia, Ontario, and was graduated from the University of Toronto in 1910 with a Bachelor of Arts degree and three years later with the degree of Bachelor of Divinity.

Following graduation, he spent two years in pioneer missionary work in the Peace River District; then served as chaplain with the Fourth Field Artillery Brigade for the period of the war, winning the Military Cross.

On his return from overseas, he was Personnel Manager for the Massey-Harris Company for over ten years, during which time he served on the Industrial Relations Committee of the Canadian Manufacturers' Association and was also active in various private social welfare organizations in the city of Toronto.

Upon the formulation of the Municipal Department of Public Welfare in Toronto, Mr. Thompson was appointed Superintendent. Following this, he served as Secretary for Toc H for some years and was actively interested in some projects with unemployed men in Toronto.

In the summer of 1936 he was appointed a member of the National Advisory Committee on Youth Employment.

Canadian Legislation on Occupational Diseases

An article entitled "Legislation in Canada concerning Occupational Diseases" is published in this number of the LABOUR GAZETTE. Except for regulations for the prevention of anthrax infection and phosphorus poisoning by prohibiting the importation into Canada and, in the latter case, by forbidding also the manufacture of articles likely to cause these diseases, the laws and regulations relating to occupational diseases are made by the provinces. Compensation to workers suffering death or disability from certain diseases arising from their employment is paid in all the provinces except Prince Edward Island. Only in a few provinces are there special regulations for the protection of workers exposed to such health hazards as silica dust, work in compressed air, lead, benzol or other industrial poisons.

In addition to the summary of such measures, information is given concerning other activities of Dominion and provincial health authorities in the field of industrial hygiene. Particular attention is paid to the Division of Industrial Hygiene of the Ontario Department of Health, and reference is made to the newly established Division of Industrial Hygiene in the Dominion Department of Health.

New Labour Legislation in Quebec

At the recent session of the Quebec Legislature, the Collective Labour Agreements Extension Act, which was passed in 1934, was repealed and a new statute entitled an Act respecting Workmen's Wages was enacted in its stead. Last fall, a committee was appointed by the Quebec Government to consider amendments to the Collective Labour Agreements Act. The Workmen's Wages Act embodies recommendations made by this committee with a view to rendering the law more effective.

A Fair Wage Act designed to supplement the Workmen's Wages Act was also passed by the Legislature. A Fair Wage Board of five members is to be established with power to fix rates of wages and to specify the hours to which such rates are to apply. The Act is applicable to all employees who are not governed by an agreement under the Workmen's Wages Act. Agricultural workers and domestic servants are outside the scope of both statutes.

The July issue of the LABOUR GAZETTE will contain a review of labour measures enacted at the 1937 session of the Quebec Legislature.

Health Insurance Plan Endorsed by Electors in B.C.

Contributory health insurance was sanctioned by the electorate of British Columbia at the provincial elections held on June 1. The Act providing for a contributory system was passed by the Legislature on March 31, 1936 (LABOUR GAZETTE, May, 1936, page 422). It was to come into effect upon proclamation, and the levies upon pay-rolls and wages were scheduled to begin on March 1, 1937 (LABOUR GAZETTE, February, 1937, page 126). But on February 19, the Hon. T. D. Pattullo, Premier of the province, announced postponement of its operation (LABOUR GAZETTE, March, 1937, page 263). It was then decided to place the matter before the electors at the general provincial election in the form of a referendum (LABOUR GAZETTE, May, 1937, page 481).

According to press reports on the result of the plebescite a "comprehensive health insurance plan progressively applied" was endorsed by a substantial majority.

Voluntary-Contributory Health Insurance in Ontario

Reference was made in the LABOUR GAZETTE for March at page 263, to the possible establishment of a system of voluntary health insurance in Ontario.

On May 31, the Associated Medical Services, Inc., sponsored by the Ontario Medical Association, commenced to function, the first applicant for this new voluntary health insurance plan being Hon. Dr. J. A. Faulkner, Ontario Minister of Health.

By the plan, any wage earner regardless of income may obtain medical, surgical and nursing care through a system of monthly payments—$2 a month for himself; $1.75 a month for his first dependent; $1.50 a month for his second dependent; $1.25 for the third, and $1 for the fourth and each subsequent dependent. Thus an average family of four may voluntarily budget against the total cost of illness for $6.50 a month.

Subscribers to the plan have the privilege of selecting their own physician or surgeon, and the new organization is prepared to pay all reasonable charges incurred for medical, surgical and nursing care. Physicians and surgeons will have their fees paid by the corporation. Participation in the scheme by doctors is voluntary, but as regular physicians' fees are to be paid it is expected that all doctors will participate. All fees collected will be expended in the form of service for subscribers, the plan having been organized on a non-profit basis.

The following are the benefits to the subscriber: the services of participating physicians in home, office or hospital, including consultations; surgical procedures within the scope of a competent surgeon; semi-private accommodation, or a sum not exceeding $3.50 a day toward the cost of hospitalization; all necessary nursing; child birth in cases where dues have been paid for ten consecutive months previous to confinement. There is a two months' waiting or probationary period, and the subscriber must pay three months' subscription before becoming entitled to any service.

The application for health insurance is divided into two parts. The first part being similar to health reports required by insurance companies when no medical examination is required. The second part is for the report of the examining physician (nominated by the Associated Medical Services) should any physical disabilities be revealed by the first questionnaire.

The following conditions, if institutionalized, are not covered by the service; mental illness of any type; epilepsy; chronic tuberculosis; or any condition which is the responsibility of any body or agency.

Associated Medical Services Inc., has its head office in Toronto, and branches may be established in any centre upon application of the county medical society. The corporation consists of medical and non-medical members with powers defined by the Companies Act. The affairs of the corporation are managed by a board of directors elected by the members.

Personnel of Ontario Labour and Industry Board

During the month, announcement was made by Hon. Mitchell Hepburn, Premier of Ontario, of the appointments to the newly established Labour and Industry Board (LABOUR GAZETTE, May, 1937, page 505). The Board is composed of five members and its chairman is Mr. E. J. Young, formerly Member of Parliament for Weyburn, Saskatchewan, and latterly a member of the National Employment Commission (LABOUR GAZETTE, May, 1936, page 392.) Representing the employers on the Board is Mr. R. B. Whitehead, of Toronto. Mr. Whitehead was formerly solicitor for the Massey-Harris Company and served on several committees of the Canadian Manufacturers Association. The representative of organized labour on the Board is Mr. Fred Bancroft, of Toronto, formerly vice-president of the Trades and Labour Congress of Canada, who has frequently served as the appointee of labour on boards of conciliation and investigation under the Industrial Disputes Investigation Act.

Others whose appointments to the Board are reported are: Miss Mary F. Mangan, formerly a teacher in the Northern Vocational School, Toronto; and Mr. J. Clifford Adams, solicitor to the provincial departments of Labour and Welfare.

The Board administers the Minimum Wage Act, 1937 (applicable to both male and female employees) and the Industrial Standards Act.

Fifth Canadian Conference on Social Work

The fifth Canadian Conference on Social Work, which was convened in Ottawa on June 1 to 3, dealt comprehensively with three major activities — public welfare, social care work and community planning. Under the heading of "public welfare," various phases of the problem of unemployment and relief were presented in papers contributed by outstanding authorities. Among these were addresses by Miss Zoe L. Puxley, O.B.E. Principal Officer of the Division of Public Assistance, British Ministry of Health, who spoke on "Recent Developments in Public Assistance in Great Britain;" and also on "The Relation of Central and Local Governments in Relief and Assistance in Britain." The particular aspects of the relief problem in Canada were described in addresses by Mr. Arthur B. Purvis, chairman of the National Employment Commission; Mr. Tom Moore, vice-chairman of the National Employment Commission; and by Mr. A. A. MacNamara, Deputy Minister of Public Works and Labour, Manitoba. Participating in the discussion on unemployment relief administration were: Professor L. Richter, Dalhousie University, Mr. F. L. Stapleford, Toronto; and Major C. S. Ford, Ottawa.

In addition to the above, other papers relative to relief were presented as follows:

"The Ontario Medical Relief Scheme"—Dr. H. C. Wales, Toronto.

"The Winnipeg Medical Relief Scheme"—Dr. E. S. Moorhead, Chairman Committee on Sociology, Manitoba Medical Association.

"The Integration of Indigent Medical Services with Health Insurance and Public Health"—Dr. Grant Fleming, Dean of Faculty of Medicine, McGill University, Montreal.

"Recent Progress in Health and Welfare Services in British Columbia"—H. M. Cassidy, Director of Social Welfare, Province of British Columbia.

"Changing Concepts"—Miss Charlotte Whitton, C.B.E.

"Housing and Social Work"—Professor E. J. Urwick, Department of Social Science, University of Toronto.

"Significant Efforts to Solve the Transient Problem in the United States"—Miss Bertha McCall, Director National Traveler's Aid Association, New York.

"Municipal Residence Rules"—George F. Davidson, Ph.D., Vancouver Council of Social Agencies.

"Social Service for Non Residents in Montreal"—Miss Mary E. Ramsden, Family Welfare Association, Montreal.

Presiding at one of the sessions was the Minister of Labour, Hon. Norman McL. Rogers.

Convention of International Association of Public Employment Services

Attended by 321 delegates, the 25th annual convention of the International Association of Public Employment Services of the United States and Canada was held on May 5, 6, and 7, at Washington, D.C. Representing the Employment Service of Canada, was Mr. A. J. Odam, Employment Statistician, who presented a paper on the "Progress of the Canadian Employment Service." One of the chief

features of the convention were the discussions centering on unemployment compensation. Ottawa was chosen as the convention city for 1938, and elected to slate of officers was Mr. V. C. Phelan, Director of Registration, National Employment Commission.

Proposed Extension of Unemployment Insurance in Great Britain

The *London Times* of May 5, 1937, states that the British Minister of Labour is proposing to extend unemployment insurance to about 200,000 persons in certain types of "domestic service" who are at present excepted because they are held to be employed in a trade or business which is not carried on for the purposes of gain. The Minister has submitted draft regulations described as "Unemployment Insurance (Insurable Employments) Regulations," to the Unemployment Insurance Statutory Committee for consideration and report.

President's Message to Congress on Social Legislation

In a message to Congress on May 24, President Roosevelt set forth his proposal for federal standards in wages and hours in the United States. Immediately following the President's message, legislation was introduced practically reviving the NRA to the extent of a federal law regulating maximum hours and minimum wages, and barring from interstate commerce the products of labour of children under sixteen.

The President's message was notable for its declaration that:

"Our Nation so richly endowed with natural resources and with a capable and industrious population should be able to devise ways and means of insuring to all our able-bodied working men and women a fair day's pay for a fair day's work. A self-supporting and self-respecting democracy can plead no justification for the existence of child labour, no economic reason for chiseling workers' wages or stretching workers' hours.

"Enlightened business is learning that competition ought not to cause bad social consequences which inevitably react upon the profits of business itself. All but the hopelessly reactionary will agree that to conserve our primary resources of man power, Government must have some control over maximum hours, minimum wages, the evil of child labour, and the exploitation of unorganized labour."

Legislation to fix hours and wages standards in U.S.A.

Implementing the President's message and defining its intent and objectives, legislation was introduced (the Black-Cannery Bills) providing for establishment by centralized federal authority of minimum wage and maximum hour standards in all classes of industry.

In broad outline, the main features of the bills include:—

(1) Mandatory standards for minimum wages and maximum hours to be applicable to all enterprises engaged in manufacturing, mining, handling or transporting goods that enter into interstate commerce.

(2) Prohibition against employment of any persons under the age of sixteen, or persons between the ages of sixteen and eighteen, in occupations held hazardous.

(3) Prohibition of employment of strike-breakers during labour controversies and of persons engaged in industrial espionage.

(4) Administration by federal Labour Standards Board having broad discretionary powers, including the power to make exceptions and exemptions and to fix separate wage rates for particular occupations and industries, in whole or in part.

These requirements would be enforced by preventing interstate movement of goods produced in violation of the terms of the measure, by direct Board orders to compel compliance with assistance of the courts, and by criminal penalties. In their present form, the bills do not include the specific standards for minimum wages and maximum hours that would be generally applicable. These are left for determination of the committees of Congress to which the bills have been rendered—the Senate Committee on Education and Labor and the House Committee on Labor. The sponsors of the legislation, however, have indicated that the basic minimum wage would probably be fixed at about sixteen dollars a week, and that basic maximum hours would be fixed at between thirty and forty a week.

None of the provisions of the legislation would become operative until one hundred and twenty days after its enactment.

Social Security Act upheld by U.S. Supreme Court

In a judgment announced on May 24, the Supreme Court of the United States sustained the constitutionality of the major provisions of the Social Security Act, viz.—the unemployment insurance and old age pensions sections. (This legislation was reviewed in the LABOUR GAZETTE for September, 1935, page 801.)

The court's decision resulted from two test cases based upon the constitutionality of the taxes imposed to support the unemployment insurance and old age pensions provisions of the legislation. The former was upheld by 5 to 4 and the latter by 7 to 2.

By five to four decisions, the Court also upheld two other important measures. These were: the Alabama State Unemployment In-

surance laws, and the Wisconsin State labour code, establishing peaceful picketing and prohibiting state court injunctions against lawful exercise of that right.

Approximately thirty million employers and wage earners are affected by these decisions.

"I.L.O.—The Unregarded Revolution"

"I.L.O.—The Unregarded Revolution" is the title of a recent informative volume by Kathleen Gibbard in which this writer sets forth in intriguing style "the beginnings of social justice," as represented by the functioning of the International Labor Organization. The book is a graphic portrayal of the meaning, purpose, and *modus operandi* of what has been described as "a successful effort in international co-operation." It takes the reader into the background of an organization salvaged out of the back-wash of war insurgency; how its constitution was incorporated with the peace treaty; of its struggle for existence, and the vitalizing power of its first Director, Albert Thomas.

In Part II the writer sketches its solid achievements in safeguarding the rights of seamen, changing the conditions of labour in Africa and the East, protecting children, struggling to help the unemployed, and assisting the spread of social insurance.

This book is published in London by J. M. Dent and Sons, Ltd., and costs 2s. 6d. net.

Public Works Planning in U.S.A.

Public Works Planning is the title of a report issued by the United States Natural Resources Committee. The report recommends "a proposed policy of planning, programming, timing, and division of costs of public works". These recommendations are based on special investigations by the Water Resources Committee on drainage basin problems and programs, by the Projects Division of the Federal Emergency Administration of Public Works on a six-year program of Federal construction, and by a special research staff on division of costs of public works.

Constituting Part II of the report, the section on Drainage Basin Problems and Programs contains suggestions for the formulation of a national water plan and program. Project lists embodied in this section of the report "provide a reservoir of undertakings" intended to cover a period of 10 or more years.

Statements in the report regarding timing and division of costs of public works emphasize the need: (1) for developing a long-time public works policy, and (2) of relating this policy to business cycles or other crises. Procedures are laid down to avoid some of the past difficulties in the choice of projects, the timing of their consturction, and the division of costs. As a means of organizing long-time public works plans the Committee suggests:—

1. A national development agency or public works authority.

2. A panel of appraisers under this agency for allocation of costs.

3. A fiscal advisory committee to adjust public works programs to the national needs for economic stabilization.

Health Plan for Hollinger Mine Workers

According to a recent announcement, over 97 per cent of the employees of Hollinger Mine in Ontario accepted a group plan whereby not only the employee but his family as well would be included for all forms of medical and surgical service. The employees were in favour of a plan which provides all medical, surgical and hospital services to Hollinger Mine employees and their families at a rate of $2.65 per period for married men and $1.75 per period for single men.

It is proposed that an organization known as the Hollinger Employees' Medical Association be formed. Employees and their dependents will be registered and those participating in the scheme will authorize the company to deduct a specified sum each period from their wages. Moneys so deducted will be placed in a special fund to be administered by two committees, one appointed from the employees and the other by the doctors. Both of these committees are to act together. Medical services will be given either at home or hospital as the circumstances of the case may warrant. All major operations will receive the benefit of a consultation as well as a qualified assistant. Maternity cases will also be looked after under the plan. Hospital expenses and the cost of all x-rays will be taken care of by the fund.

The Dominion Bureau of Statistics issued recently a quarterly report on "Coal and Coke Statistics for Canada" for the period January, February, and March, 1937, in which it is stated that coal production in Canada during the period under review totalled 3,881,639 tons, as compared with 3,912,389 tons produced in the corresponding period of 1936. Output consisted of 2,537,725 tons of bituminous coal, 145,152 tons of sub-bituminous and 1,198,762 tons of lignite coal.

Canadian coal mines employed 27,928 men in January, 27,449 in February and 25,747 men in March. Each of these men produced on an average, 144 tons during the period, or an average output of 2·7 tons per man-day.

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

Three applications for the establishment by the Minister of Labour of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour recently as follows:—

1. From 1,110 employees of the Winnipeg Electric Company being motormen, conductors and busmen, and Mechanical and Track Department employees. These workmen, members of the Street Railway Employees Unit, One Big Union, seek restoration of the 1929 wage rates.
2. From 145 employees of the Winnipeg Electric Company being operators, mechanics, meter repairmen, maintenance and construction, telephones and signals repairers, patrolmen and appliance repair employees, members of the Winnipeg Electric Substation and Hydro Plant Unit of the One Big Union. They request restoration of peak wages, shortening of period during which holidays are given, changes in overtime rates for maintenance construction employees, change in wording of Training Period Clause for substation operators, and an agreement with the company covering Electrical Appliance Repair Department.
3. From 771 employees of the Revenue Accounting Department of the Canadian National Railways at Montreal being clerks, members of the Canadian Brotherhood of Railway Employees, and others who have authorized in writing the said Brotherhood to represent them. The employees desire to negotiate with the company a schedule of rules to govern working conditions and rates of pay.

Applications Withdrawn

The two applications for the establishment of Conciliation Boards submitted in October (Labour Gazette, November, 1937, page 980) by telegraph messengers in the employ of the Canadian Pacific Railway Company and the Canadian National Telegraphs, respectively, have been withdrawn, a basis for direct negotiations having been arranged as a result of conferences held by departmental officials in Montreal on May 27 with representatives of the employees, and on May 28 with officials of the telegraph companies.

Report of Board in Dispute Between the Canadian Marconi Company and Its Coast Station, Ships' and Trans-Oceanic Telegraphers

A unanimous report was presented to the Minister of Labour on June 2 by the Board of Conciliation and Investigation established in April to deal with a dispute between the Canadian Marconi Company and its coast station telegraphers, ships' telegraphers and trans-oceanic telegraphers, members of the Canadian Marconi System, Division No. 59, Commercial Telegraphers' Union. The Board was composed of the following: Mr. H. H. Ward, of Ottawa, Chairman, appointed on the joint recommendation of the other Board members; Mr. F. Curzon Dobell, of Montreal, nominated by the company; and Mr. Thomas Taylor, of Toronto, nominated by the employees. The employees, 200 in number, sought restoration of the 1929 basic wage scales and allowances as applying to the marine agreement, and an upward revision of the basic wage scales and allowances under the trans-oceanic agreement; also changes in certain operating practices.

During proceedings before the Board the parties reached agreement on certain points in dispute. They were unable to agree, however, on all phases of the wages question, as well as on various other items involving additional expenditure, and in regard to these matters the Board submitted unanimous recommendations.

In connection with the marine service the Board recommended for coast station telegraphers cancellation of the existing 5 per cent wage deduction after July 31, 1937; and for ships' telegraphers, cancellation of the existing 10 per cent wage deduction by progressive steps, the 10 per cent deduction to become 5 per cent after October 31, 1937, and 2½ per cent after April 30, 1938, with basic rates restored on November 1, 1938.

With respect to trans-oceanic telegraphers the parties themselves agreed before the Board to new classifications and wage rates for probationers and junior grades. In regard to the regular grades the Board recommended new basic rates ranging from $140 per month for the fifth year to $175 per month for the fourteenth year; also wage rates of $175 per month for a new classification of technical supervisor, 1st year, and $180 per month, second year.

The text of the Board's report follows:—

Report of Board

In the matter of the Industrial Disputes Investigation Act, R.S.C. 1927, Chap. 112, and

In the matter of differences between the Canadian Marconi Company (Limited Liability) and certain of its employees being coast station telegraphers, ships' telegraphers and trans-oceanic telegraphers, members of the Canadian Marconi System Division No. 59, Commercial Telegraphers' Union of North America.

To the Honourable
the Minister of Labour,
Ottawa, Ont.

SIR,—The Board of Conciliation and Investigation established by you under date of March 27, 1937, to inquire into the matter as above referred to begs leave to report, advise and recommend as hereinafter set forth.

The Board was composed of H. H.. Ward, Ottawa, appointed as Chairman on the joint recommendation of the other two members in the persons of F. Curzon Dobell, Barrister, of Montreal, and Thomas W. Taylor, of Toronto, appointed on the recommendation of the employer and employees respectively.

The personnel of the Board was completed by the appointment of the Chairman under date of April 14, 1937.

The Board, to suit the convenience of the parties, was convened at Montreal on the morning of Monday the 26th day of April, 1937, and proceeded, after first taking its oath of office, to familiarize itself from the Reference received from the Registrar under the Act with the nature of the dispute.

The parties to the Reference were called to appear before the Board at 2.30 p.m., April 26, 1937, and were represented as follows:—

For the Canadian Marconi Company (Limited Liability):

S. M. Finlayson, Assistant to General Manager.
W. J. Gray, Marine Superintendent.
G. F. Eaton, Division Manager, Toronto.
P. J. Murphy, Traffic Manager.
A. J. Sundstrom, Assistant to Traffic Manager.
A. Wilkins, Assistant to Marine Superintendent.
James Fergus, Secretary to Company.

For the Employees:

W. L. Allen, International Secretary-Treasurer.
Frank C. Allen, General Chairman, Division No. 59.
P. J. McMenemy, Chairman, Great Lakes Ship Dist., Div. No. 59.
C. Wilkins, Atlantic Ship District, Div. No. 59.
L. J. A. Chevron, Eastern Chairman, Div. No. 59.
C. H. Ross, District Chairman, Trans-Oceanic, Div. No. 59.

At the opening session the Chairman read the Commission giving the Board authority to function, and the Reference, being the employees, statement of application for a Board and the company's statement in reply, was then reviewed with the parties, and each side made formal statements of the nature of the dispute and the history of events leading up to the establishment of the Board.

The Board at its second session proceeded to hear the formal presentation of the case of each, and the presentation, because of the complexity of the points in dispute, required a number of days, during which time voluminous statements and exhibits were placed before the Board with a view to assisting it in a proper appreciation of the situation.

The items in dispute were those set forth in the application for the appointment of a Board, and are herewith set out:

"We seek the revision of the 1929 Agreements (Marine and Trans-Oceanic).

Restoration of the basic wage scales and allowances, as applying to the Marine.

Upward revision of basic wage scales and allowances for Trans-Oceanic Telegraphers.

We claim violation by the company of the spirit and intent of the existing Trans-Oceanic Agreement:—

(A) The company uses Supervisors on its operating circuits at certain periods, where we claim Telegraphers should be used;

(B) The substitution of check boys, service clerks, etc., (unscheduled) in the operating service which we claim is properly the work of a scheduled Telegrapher;

(C) Other grievances in connection with operating practices, which we allege are flagrant violation of the Agreement."

It quite early developed during the Sessions that, apart entirely from the question of restoration of basic wage scales and allowances as applying to the Marine Agreement, and upward revision of basic scales and allowances under the Trans-Oceanic Agreement (main issues, of course, in themselves), the revisions being sought in the two agreements were very extensive and complicated, and certain other points in the Trans-Oceanic Agreement rather technical in their nature, thus placing no minor task on the members of the Board in reviewing the very extensive evidence submitted by the parties, both written and oral. In many instances the subject matter under

review required practical elucidation, and to this end the Board found it essential to visit the various departments of the company's telegraph service for fuller enlightenment.

During the sessions both sides to the dispute produced to the Board proposed draft agreements which they desired put into effect. It was ascertained that both parties were in agreement on a number of articles, but in a great many others considerable difference of view existed. During the several days' deliberations the parties, with the Board's assistance, came to further agreement on certain points, but there still remained several items, mostly if not all involving additional expenditure, and including the wage question, on which the parties found it impossible to agree.

With full discussion having taken place on all disputed points, and there appearing very little that the Board could further accomplish by way of conciliation, the proceedings for evidence and argument were concluded, and the Board then proceeded to its own deliberations, which required some little time, as to the recommendations which it should submit in its report.

The Board is pleased to report, after a thorough review of all evidence submitted, that with respect to those Articles, or clauses of Articles, left for it to deal with, it has arrived at a unanimous decision.

Attached hereto as Exhibits "A" and "B" are draft Agreements for the "Marine Section" and "Trans-Oceanic Section," respectively, and which the Board recommends and believes should be entered into between the parties to the dispute.

The Articles, or portions of Articles, which were not agreed upon between the parties are, in the attached draft agreements, set out in large type, and represent as above stated the unanimous opinion and recommendation of the Board for the settlement of the dispute according to the merits and substantial justice of the case.

All clauses, other than those set out in large type in the attached draft agreements and other than certain suggested clauses whose inclusion the Board does not recommend, are satisfactory to and have been approved by the two parties.

The Board in expressing the hope that its unanimous recommendations will be accepted by both parties, desires to acknowledge the very excellent, comprehensive and fair manner in which their evidence and argument relative to the matters in dispute were presented, and is convinced that the friendly relationship so thoroughly manifest throughout the entire proceedings will continue to exist.

Respectfully submitted,

(Sgd.) H. H. WARD,
Chairman.

(Sgd.) F. CURZON DOBELL,
Member.

(Sgd.) THOS. W. TAYLOR,
Member.

Dated at Montreal, P.Q., Monday the 31st day of May, 1937.

EXHIBIT "A" TO REPORT OF BOARD OF CONCILIATION DATED MAY 31, 1937

AGREEMENT *Between Canadian Marconi Company (Limited Liability) and Canadian Marconi System Division No. 59, the Commercial Telegraphers' Union, Governing Rates of Pay and Conditions of Service of Wireless Telegraphers Engaged in the Marine Service.*

AN AGREEMENT made this day of Nineteen Hundred and

at Montreal, P.Q., between Canadian Marconi Company (Limited Liability), hereinafter called the Company, and a subordinate unit of the Commercial Telegraphers' Union, known as Canadian Marconi System Division No. 59, hereinafter called the Union.

WITNESSETH:

ARTICLE 1

Clause A

The Company shall furnish annually during the term of this agreement to the General Secretary-Treasurer of the Union, in triplicate, by March 1, a list showing the seniority of all Telegraphers and the divisions to which they are attached as at December 31, and such list shall be kept up to date monthly by advising this Officer of any changes. The monthly amendments shall indicate the divisions to which new entrants are attached.

Clause B

The General Secretary-Treasurer shall be advised, as soon as possible after the first day of each month, of the month-end location of all Telegraphers who have been transferred during the preceding month and such advice shall show the location of new entrants.

Clause C

The right of seniority shall govern in all cases, ability, technical and otherwise, being equal.

Clause D

All seniority shall be determined by accumulated service and seniors under this clause who have the requisite ability, technical and otherwise, shall be eligible for, and shall receive consideration in the matter of appointments to the higher positions in the service.

Clause E

In cases of absences due to illness, consideration will be given by the Company to individual cases with respect to continuity of seniority.

ARTICLE 2

Clause A

Any Telegrapher in good standing whose services have been dispensed with on account of reduction in staff shall be given preference in the filling of new positions or vacancies, ability, technical and otherwise, being equal.

Clause B

In the case of reduction in staff the junior Telegrapher shall be dispensed with first, having due regard to the exigencies of service. If due to the exigencies of service at the close of navigation on the Great Lakes a junior Telegrapher continues to be engaged to the disadvantage of a relatively senior Telegrapher, the said senior Telegrapher shall not suffer loss of seniority to a greater extent than fifteen days in respect to his relative position with the said junior and shall be given priority in the matter of reassignment to duty.

Clause C

Telegraphers leaving the service of their own accord shall be required to give the Company fifteen days' previous notice in writing and acknowledgment of the receipt of such notice shall be sent without delay by the proper authority.

Clause D

1. IN THE EVENT OF REDUCTION OF STAFF OF COAST STATION TELEGRAPHERS, THE COMPANY SHALL GIVE FIFTEEN DAYS' PREVIOUS NOTICE IN WRITING OR FIFTEEN DAYS' WAGES INCLUSIVE OF ALL ALLOWANCES IN LIEU THEREOF.

2. IN THE EVENT OF REDUCTION OF STAFF OF SHIP TELEGRAPHERS, THE COMPANY WILL ENDEAVOUR TO OBTAIN ADVANCE NOTICE FROM THE SHIPOWNER CONCERNED AND WILL GIVE THE TELEGRAPHER THE SAME NOTICE AS IT RECEIVES, WHICH SHALL IF POSSIBLE BE FIFTEEN DAYS' PREVIOUS NOTICE OR FIFTEEN DAYS' WAGES IN LIEU THEREOF.

Clause E

Dismissal cases consequent upon proved misdemeanor shall not be entitled to previous notice or pay in lieu thereof, as provided in the foregoing clause.

ARTICLE 3

Clause A

No Telegrapher shall be suspended except for investigation, and no Telegrapher shall be disciplined or discharged until his case has been investigated and he has been proved guilty of the offence (s) charged against him. Any Telegrapher who has been suspended and disproving the offence (s) charged against him, shall be reinstated and reimbursed for all loss of pay.

Clause B

A Telegrapher, leaving the service, shall, upon application, be furnished with a certificate of discharge by the Company and such certificate shall show length of service, capacity in which employed, and if desired by the Telegrapher, a recommendation as to character and ability. This certificate shall be available to the Telegrapher with his settlement cheque, and within a reasonable time.

ARTICLE 4

Clause A

GENEROUS EFFORT SHALL BE MADE TO GRANT VACATIONS OF UNCERTAIN AND VARIABLE DURATION WITH FULL WAGES AS PER SCALE TO SHIPS' TELEGRAPHERS WHO HAVE BEEN ON EXTENDED SHIP'S SERVICE AND WHO HAVE BEEN UNABLE TO SECURE SHORE LEAVE FOR A PROLONGED PERIOD, SUCH VACATIONS TO TAKE EFFECT IMMEDIATELY UPON THEIR RETURN TO THEIR DIVISIONAL HEADQUARTERS.

Clause B

TWO WEEKS' LEAVE OF ABSENCE, WITH FULL WAGES AND MAINTENANCE ALLOWANCE AS PER SCALE, SHALL BE DUE TO TELEGRAPHERS UPON COMPLETION OF ONE FULL YEAR'S SERVICE AT COAST STATIONS, AND YEARLY THEREAFTER.

Clause C

Vacations shall be granted subject to the mutual convenience of the Telegrapher and the Company, and as far as possible between the months of May and October inclusive.

Clause D

ON ALL COAST STATIONS, Full holidays shall be granted on the Dominion Public Legal Holidays named in Clause E of this Article.

Clause E

Dominion Public Legal Holidays (New Year's Day, Good Friday, Empire Day, Dominion Day, Labour Day, Thanksgiving Day, Remembrance Day and Christmas Day), which occur during the term of A COAST STATION TELEGRAPHER'S vacation shall not be deemed a part of such vacation, and extra days shall be allowed.

Clause F

COAST STATION TELEGRAPHERS who are required to work on any of the above mentioned holidays shall be paid for same on a pro rata basis inclusive of maintenance allowance.

Clause G

At Coast Stations on Dominion Public Legal Holidays, the Officer in Charge is authorized to requisition the services of sufficient Telegraphers (of whom he may be one), to carry on the work.

Clause H

Vacation periods shall not be cumulative and payment in lieu of lapsed vacations shall not be made except as provided in Clause A of this Article. In special cases, consideration relative to cumulation will be given upon application.

Clause I

Casual service aboard ship of regularly appointed Coast Station Telegraphers by way of temporary relief shall not be deemed a reason for denial of annual vacations as per Clause B of this Article.

ARTICLE 5

Clause A

WAGE SCALE AND ALLOWANCES

First year	$ 70.00	per	month
Second year	80.00	"	"
Third year	90.00	"	"
Fourth year	100.00	"	"
Fifth year	110.00	"	"
Sixth year	122.50	"	"
Seventh year	127.50	"	"
Eighth year	132.50	"	"
Ninth year and thereafter	135.00	"	"

Clause B

In addition to the above scale, an allowance of $40 per month shall be paid to COAST STATION TELEGRAPHERS where maintenance is not furnished.

Clause C

Full maintenance allowance shall be paid in all cases where a Coast Station Telegrapher has been temporarily assigned to ship duty for a period of three weeks or less.

Clause D

A bonus of $15 per month shall be payable to regularly appointed Officers in charge of Coast Stations.

A similar bonus shall be payable to any Telegrapher temporarily appointed to the duties of Officer in Charge except as provided in Clause E of this Article.

A Telegrapher, alone on a Coast Station, where such Coast Station is in operation, shall be entitled to and shall receive the bonus attached to the position of Officer in Charge.

Clause E

Regularly appointed Officers in Charge of Coast Stations shall not suffer loss of bonus due to absences on annual vacation, but such bonus shall not be payable to substitutes.

Clause F

On ships carrying two or more Telegraphers, a bonus of $10 per month shall be payable to the Officer in Charge on such ships.

Clause G

A UNIFORM ALLOWANCE OF $20 FOR EACH SIX MONTHS OF SERVICE SHALL BE PAYABLE IN ADVANCE TO SHIPS' TELEGRAPHERS WHERE UNIFORM IS REQUIRED TO BE WORN BY SHIPS' REGULATIONS.

TRIMMINGS SHALL BE SUPPLIED FREE OF CHARGE BY THE COMPANY AND SHALL REMAIN THE PROPERTY OF THE COMPANY.

Clause H

IN THE EVENT OF A COAST STATION BEING SHORT STAFFED, OVERTIME FOR THE EXTRA DUTY IN EXCESS OF EIGHT HOURS PER DAY SHALL BE PAID AT THE RATE OF TIME AND ONE HALF OF THE REGULAR WAGE, INCLUSIVE OF ALL ALLOWANCES, AND BASED ON THREE HUNDRED AND THIRTEEN WORKING DAYS PER YEAR.

Clause I

When acting on instructions received from the Company's Officials, a Telegrapher, in addition to his own tour of duty, proceeds to inspect, overhaul, and/or repair apparatus, other than that of his own station, overtime shall be paid for such additional work as per Clause H of this Article.

Clause J

In the event of a Telegrapher on any Coast Station, after having completed his regular tour of duty, being transferred to and reporting for duty on a ship, on the same day, such Telegrapher shall be allowed the regular overtime rate of pay as from the time he proceeds to move until he arrives on shipboard, or until he ceases duty on that day, whichever shall be the later.

Clause K

Following assignment and on arrival at Coast Stations, third operators (and fourth) may, at the discretion of the Officer in Charge, be advanced a maximum of $5 to enable them to take up residence and such advances shall be chargeable to their current maintenance allowance.

Clause L

ALL AMOUNTS FOR WAGES AND ALLOWANCES MENTIONED IN CLAUSES "A" TO "J" INCLUSIVE OF THIS ARTICLE,

(*a*) IN THE CASE OF COAST STATION TELEGRAPHERS TO BE LESS 5 PER CENT UP TO JULY 31st, 1937; and

(*b*) IN THE CASE OF SHIPS' TELEGRAPHERS TO BE LESS 10 PER CENT UP TO OCTOBER 31st, 1937, THEREAFTER TO BE LESS 5 PER CENT UP TO APRIL 30th, 1938, AND THEREAFTER TO BE LESS 2½ PER CENT UP TO OCTOBER 31st, 1938.

Clause M

SUBJECT TO THE PROVISIONS OF ARTICLE 2, CLAUSE D, A SHORE ALLOWANCE TO COVER LIVING EXPENSES, BASED ON $40 PER CALENDAR MONTH, SHALL BE PAID TO SHIPS' TELEGRAPHERS WHEN SHIP IS LAID UP AND SUCH TELEGRAPHERS STILL ON LAY-OFF NOTICE AND UNABLE TO LIVE AND MESS ABOARD.

ARTICLE 6

Clause A

SUBJECT AT ALL TIMES TO THE AUTHORIZATION OF THE OWNER OF THE STATION, OR OF THE CONTROLLING ADMINISTRATION, AS THE CASE MAY BE, THE NORMAL STAFF ON COAST STATIONS OPERATING CONTINUOUSLY (TWENTY-FOUR (24) HOURS PER DAY, THREE HUNDRED AND SIXTY-FIVE (365) DAYS PER YEAR) SHALL BE FOUR (4) MEN PER STATION. AT SUCH STATIONS, EACH MEMBER OF THE STAFF SHALL BE RELIEVED OF DUTIES ONE (1) DAY IN EACH WEEK.

Clause B

The staff carrying out the duties appertaining to any Coast Station shall, while so engaged, be entitled to any benefits accruing to Coast Station service, excepting only such casual relief Telegraphers as may on occasion be required to fill temporary vacancies caused by unforeseen happenings, such as sickness, etc.

In so far as it is mutually desirable and can be arranged, the junior members of such staffs who are laid off at the close of navigation each year shall again be appointed to the same stations at the re-opening of navigation in the following and succeeding years.

Clause C

Vacancies for the positions of Officer in Charge and/or Second Operator on Coast Stations shall be bulletined by the Company, in so far as this is practicable.

ARTICLE 7

Clause A

Cheques in payment of wages shall be available to Telegraphers as soon as possible after the first of the month following that for which payment is due, and not later than the fifteenth.

Clause B

A Telegrapher upon being laid off as provided herein (Article 2, Clause D), shall be entitled to wages, transportation, including reasonable baggage transfer, and expenses until his return to Divisional Headquarters to which he shall proceed without needless delay; provided that if with the sanction of Divisional Office a Telegrapher proceeds elsewhere than to Divisional Headquarters, he shall receive wages, transportation, including reasonable baggage transfer, and expenses, but not in excess of the amount necessary to bring him to Divisional Headquarters from point of lay-off.

Clause C

A Telegrapher who resigns from the service, or who is dismissed on account of proven misdemeanor, shall not be entitled to transportation and/or expenses to his Divisional Headquarters or elsewhere.

Clause D

In all cases of transfer, sufficient funds shall be advanced to cover reasonable expenses, including baggage. Telegraphers travelling upon the Company's service between points on the North American Continent shall be entitled to first class rail and/or steamship fare, reasonable hotel accommodation and board. When travelling to or from points other than on the North American Continent, Telegraphers shall be entitled to second-class steamship fare and/or rail fare equivalent to first-class accommodation on Canadian railways. Reasonable hotel accommodation will be allowed.

Clause E

Vouchers shall be obtained and shall be filed with the Company when statements of expense are submitted.

ARTICLE 8

Clause A

Wages shall commence from, and shall include the date upon which the Telegrapher is engaged by the Company, which date shall mean the day upon which the Telegrapher reports for duty at the Station to which he is assigned, or the day upon which he leaves the appropriate Divisional Office of the Company to assume the assignment.

Telegraphers receiving telegraphic or telephonic instructions to take up assignments shall not be required to pay charges on such communications.

When a Telegrapher is instructed to report direct to a designated station, his wages shall commence on the same basis as would obtain had he first reported for duty to the Divisional Headquarters nearest the point at which he receives his instructions.

Clause B

No deduction from wages or allowances shall be made where a Telegrapher, acting on instructions received from the Company, is travelling on the Company's business.

Clause C

In the case of transfer of a Telegrapher from one Coast Station to another, travelling expenses shall be paid in lieu of maintenance allowance.

ARTICLE 9

Clause A

No Telegrapher shall be transferred unjustly or unfairly.

Married men, when being transferred on the initiative of the Company, shall, immediately prior to transfer date, and without monetary loss to themselves, be freed from Station (Coast Station) duty for four (4) days. This provision shall not apply in the case of temporary transfers.

Clause B

Orders of transfer shall be in writing and may be communicated by message, letter, or transfer card.

Urgent instructions received by telephone shall be subsequently confirmed in writing.

ARTICLE 10

Clause A

A Telegrapher aboard ship shall hold the title of "Wireless Officer" and the Company will endeavour to arrange with ship owners to have Wireless Officers sign the ships' articles as such.

Clause B

The Company undertakes to insert in its future agreements with shipowners for the provision of Telegraphers' services a clause providing that the shipowners shall furnish Wireless Officers with medical and other attendance and comfortable sleeping accommodation in accordance with the terms of the ship's articles, and where more than one Wireless Officer is employed, to provide sleeping accommodations for them in a suitable room separate from the Wireless cabin.

ARTICLE 11

Clause A

The Company shall not be held liable for damage to or loss of Telegraphers' personal property in stations or dwellings through fire or any other cause.

Clause B

Rentals on dwellings shall not be more than nine dollars ($9.00) per month.

Clause C

Fuel shall be supplied by the Company in accordance with actual requirements for operating individual stations, but not for dwellings, except where the dwelling and the station are in one building, in which case fuel shall be supplied by the Company for station and dwelling combined.

Clause D

The Company shall supply light for all stations and dwellings attached thereto.

The Company shall pay all taxes on station property and buildings.

ARTICLE 12

Clause A

Absence from duty consequent upon authorized Union or Company conferences shall not affect seniority.

Clause B

If at any time a negotiating or other authorized Union Committee expresses the desire to

have an International Officer of the Commercial Telegraphers' Union or his duly accredited deputy present at conferences, the Company will offer no objections.

Clause C

(1) The Company, upon request of the General Chairman, shall meet a Committee to discuss grievances, whether actual or alleged.

(2) The District Manager or Divisional Superintendent, upon request of the District Chairman, shall meet a Committee to discuss grievances, whether actual or alleged.

(3) Where negotiations as between the District Chairman and the District Manager, or Divisional Superintendent fail, the Company, on request of the General Chairman, shall meet a further Committee, to be named by the General Chairman.

ARTICLE 13

Clause A

This Agreement shall be effective as of June 1, 1937, and shall supersede all previous Agreements.

This Agreement shall remain in force until May 31, 1939, and shall thereafter renew itself for periods of two years unless or until either party shall notify the other in writing at least sixty days before the end of the initial or any subsequent period of its desire to revise or terminate said Agreement.

Clause B

It is understood and agreed that this Agreement does not apply to the Coast Stations in Newfoundland operated by the Company under contract with the Newfoundland Government.

In witness whereof:

We have hereunto affixed our hand and seal, the day of Nineteen Hundred and Thirty

CANADIAN MARCONI COMPANY,

..... Director

EXHIBIT "B" TO REPORT OF BOARD OF CONCILIATION DATED MAY 31, 1937

AGREEMENT *Between Canadian Marconi Company (Limited Liability) and Canadian Marconi System Division No. 59, the Commercial Telegraphers' Union, Governing Rates of Pay and Conditions of Service of Operators Engaged in the Transoceanic Service.*

AN AGREEMENT made this day of Nineteen Hundred and at Montreal, P.Q., between Canadian Marconi Company (Limited Liability), hereinafter called the Company. and a subordinate unit of the Commercial Telegraphers' Union, known as Canadian Marconi System Division No. 59, hereinafter called the Union.

WITNESSETH:

ARTICLE 1

Clause A

The Company will furnish a list showing the seniority of all Technical Supervisors and regular grade operators, in triplicate, to the District Chairman of the Transoceanic unit, and such lists shall be kept up to date by periodical amendments as found necessary consequent on lay-offs, promotions, etc.

Current amendments shall show the accumulated seniority of those laid off on account of staff reductions, and probationary promotions which have been confirmed as permanent since the last amendment.

Clause B

The right of seniority shall govern in all cases, ability, technical and otherwise, being equal.

Clause C

Seniority shall be determined by accumulated service.

Seniors shall receive consideration in the matter of appointments to the higher positions in the service, and, in such event, seniority shall govern as per Clause B of this Article.

Clause D

In the event that an operator is transferred from the Montreal Transoceanic Central Office to some other branch of the service and in time returns to the former (Transoceanic Service), he shall not forfeit previously accumulated seniority in that service, and his seniority shall continue as from the date of his return to the Transoceanic Service. When an operator has been seconded and voluntarily or at the request of the Company returns to the C.T.O. prior to his new position being confirmed, such operator's seniority in C.T.O. shall be continuous during the interim.

ARTICLE 2

Clause A

TWO WEEKS' LEAVE OF ABSENCE WITH FULL PAY SHALL BE DUE TO OPERATORS UPON THE COMPLETION OF ONE FULL YEAR'S SERVICE AND YEARLY THEREAFTER.

Clause B

Vacation periods shall not be cumulative and payment in lieu of lapsed vacation shall not be made. In special cases, cumulative vacations may be granted upon application and at the discretion of the Company.

Clause C

Applications for vacations filed in January and February of each year shall be given preference in the order of seniority of applicants, and such applications shall have preference over later applications. So far as possible, the Company will arrange vacations between and including the months of June and September when so desired by the applicant.

ARTICLE 3

Clause A

The Company, upon request of the District Chairman, shall meet a Committee to discuss grievances, whether actual or alleged; such request to be in writing with the subject clearly indicated.

Clause B

Where negotiations as between the Company and the District Chairman fail, the Company, upon request of the General Chairman, shall

meet a further Committee to be named by the General Chairman.

ARTICLE 4

Clause A

Operators leaving the service of their own accord shall be required to give the Company fifteen days' previous notice in writing, and acknowledgment of the receipt of such notice by the Company shall be made in writing by the proper authority without delay.

Clause B

The Company shall be required, in the event of reduction in staff, to give fifteen days' previous notice in writing, or fifteen days' wages in lieu thereof.

Clause C

Dismissal cases, consequent upon proven misdemeanor, shall not be entitled to previous notice or pay in lieu thereof.

Clause D

No operator shall be disciplined, suspended or discharged except for misdemeanor, lack of ability or other just cause, and any operator who has been so suspended or discharged and disproving the charge (s) made against him, shall be reinstated without prejudice and shall be reimbursed for all loss of pay.

Clause E

An operator on leaving the service shall be furnished with a certificate by the Company, upon application, stating length of service, capacity in which employed and, if desired by the operator, a recommendation as to character and ability. Such certificate shall be available to the Operator with his settlement cheque and within a reasonable time.

ARTICLE 5

Clause A

Wages shall commence from and shall include the date upon which an Operator assumes the duties to which he has been appointed by the Company.

Clause B

No deduction from wages shall be made where an Operator is travelling on instructions received from the Company.

ARTICLE 6

Clause A

In all cases of transfer sufficient funds shall be advanced to cover reasonable expenses, and Operators travelling on the Company's service shall be entitled to first class rail and steamship fare, reasonable hotel accommodation and board.

Clause B

Vouchers shall be filed with the Company when statements of expenses are submitted.

Clause C

Orders of transfer shall be in writing and may be communicated by message, letter or transfer card.

Clause D

No operator shall be transferred unjustly or unfairly, and married men, when being transferred on instructions from the Company, shall immediately prior to transfer date, and without monetary loss, be freed from station duty for four days.

Clause E

The travelling expenses of an operator's immediate family, plus the transportation costs of his domestic goods and chattels, shall be paid by the Company where such operator is acting on instructions received from the Company.

ARTICLE 7

Clause A

Eight hours shall constitute a working day, and forty-eight hours shall constitute a working week. Sundays shall not be considered as part of the working week.

Clause B

A meal relief of forty (40) minutes shall be provided on all regular tours of duty.

Clause C

On completion of the regular eight-hour tour of duty, an Operator, if kept on overtime, shall be granted a meal relief of twenty (20) minutes within and for each four hours of such overtime.

Clause D

All time worked in excess of the regular eight-hour tour of duty, and all time worked on Sundays, shall be paid for at the rate of time and one-half of the regular wage rate.

Clause E

ALL TIME UP TO EIGHT HOURS WORKED ON DOMINION PUBLIC LEGAL HOLIDAYS, REFERRED TO IN CLAUSE F OF THIS ARTICLE, SHALL BE PAID FOR AT PRO RATA RATES IN ADDITION TO THE MONTHLY WAGE. AFTER EIGHT HOURS WORKED ON SUCH HOLIDAYS TIME AND ONE-HALF SHALL BE PAID.

Clause F

Full holidays shall be granted on all Dominion Public Legal Holidays. Said holidays to be: New Year's Day, Good Friday, Empire Day, Dominion Day, Labour Day, Thanksgiving Day, Remembrance Day, and Christmas Day, eight (8) days in all.

Clause G

If a sufficient number of Operators do not voluntarily agree to work on public holidays, the Company will have the right to assign the required number of Operators to each successive public holiday in regular staff rotation.

Clause H

Overtime shall be computed on a basis of three hundred and five (305) working days per year.

Clause I

Dominion Public Legal Holidays as per Clause F of this Article, which occur during the term of an Operator's annual vacation, shall not be deemed as part of such vacation, but extra days in lieu thereof shall be allowed.

ARTICLE 8

Clause A

Salary cheques shall be available to the Operators semi-monthly, on the 15th and last day of each month, and when possible not later than 8.00 a.m. for the midnight to 8.00 a.m. staff.

Clause B

Overtime worked in any month shall be paid for not later than the fifteenth of the following month.

Clause C

When wage cheques indicate that other than straight salary is being paid, a slip shall be furnished with the cheque showing any plus

or minus amounts so added or deducted and the reason (s) therefor.

ARTICLE 9

Clause A

In the event of the absence of a Traffic Supervisor on vacation or for other cause, the Technical Supervisor shall act as Traffic Supervisor, and the senior operator on duty with the staff affected shall act as Technical Supervisor for such period, subject to the provisions of Article 1, Clause B.

Clause B

Substitute Traffic Supervisors under Clause A of this Article shall receive Junior Traffic Supervisor's salary rating after a one (1) day period. Operators acting as Technical Supervisors shall after a one (1) day period receive Junior Technical Supervisor's salary rating.

ARTICLE 10

Clause A

WAGE SCALE—CENTRAL TELEGRAPH OFFICE

Probationers—			
1st Year.....	$ 80.00	Per	Month
2nd "	90.00	"	"
Junior Grade—			
1st Year.....	$100.00	Per	Month
2nd "	110.00	"	"
3rd "	120.00	"	"
4th "	130.00	"	"
Regular Grade—			
5th Year.....	$140.00	Per	Month
6th "	145.00	"	"
7th "	150.00	"	"
8th "	155.00	"	"
9th "	160.00	"	"
10th "	165.00	"	"
11th "	167.50	"	"

14th "	175.00	"	"
Technical Supervisor—			
1st Year.....	$175.00	Per	Month
2nd "	180.00	"	"

Clause B

For purpose of continuity in the wage scale and the relation of the junior grade to the regular grade operators, the first two years of employment will be classed as probationary to be followed by four years labelled 1 to 4 inclusive in the junior grade. For all other purposes, however, the terms junior and probationer are to be considered as synonymous and all regulations applying to the junior group shall apply with equal force to the probationers, i.e., the two probationary years and the four junior grade years are for practical purposes a single unit in organization. Wherever in the agreement reference is made to junior grade, the reference applies equally to probationers.

Clause C

Promotions from junior to regular operating grade will be made as vecancies, other than temporary, occur in the regular grade and in accordance with Article 1, Clause B.

Clause CA

Probationers and Junior Grade operators shall be employed, promoted and dismissed by the Company in its discretion. The Company will, however, apply the provisions of Article 3 of this Agreement to probationers and Junior Grade operators in any case in which it appears desirable so to do.

Clause D

Regular grade operators will be eligible for promotion to positions of Technical Supervisors in accordance with Article 1, Clause B, as and when vacancies occur.

Clause E

The foregoing scale of wages shall apply to Operators engaged on the existing Trans-Oceanic circuits (which include the New York circuit) or additional circuits of similar type at the Montreal Central Telegraph Office so long as the present system of sending and receiving now used by the Company remains in use.

Clause F

Operating duties within the meaning of this Agreement are:—

(*a*) The perforation of all classes of messages for transmission and the transcription of all classes of messages received over the telegraph circuits in Central Telegraph Office under the present system of communication.

(*b*) Duties pertaining to the transmission, checking and movement of traffic in Central Telegraph Office as designated by the Traffic Supervisor.

Clause G

In the case of reduction in staff the principle of seniority shall govern. Thus, the services of first and second year probationers shall be dispensed with in that order, to be followed by the Junior Grade Operators in the first, second, third and fourth years. When all the Junior Grade shall be laid off and further reductions in staff are necessary, the same principle shall be applied to the regular grade.

Clause H

When the occasion arises to fill new positions and/or vacancies, the procedure outlined in Clause G above shall be reversed. Regular Grade Operators shall be reinstated first providing that the layoff period of any operator has not exceeded twelve months. However, any Operator in good standing who has been laid off for more than twelve months shall be given prior consideration in the filling of new positions or vacancies should the Company consider such operator to be suitable for re-employment.

Clause I

Junior Grade Operators will at no time be called upon to work overtime on "live" traffic except when regular operators are not available.

Clause J

It is understood that the total number of hours worked in any twenty-four (24) hour period by the Junior Grade Operators shall not exceed eight boy hours, or 10 per cent of the ordinary time worked by the regular grade, whichever be the greater. This working period may, however, be divided amongst several or all the Junior Grade Operators in accordance with the needs of the business, subject, however, to Clause K of this Article.

Clause K

When a Junior Operator has attained a total working period on the circuit of 2,440 hours, he shall not be further employed on the circuit until such time as all other junior operators have attained the same working experience on the circuit. Such retention shall not preclude annual increases, as per Article 10, Clause A.

Clause L

Traffic Supervisors shall not perform operating duties to the complete exclusion of the regular operators.

ARTICLE 11

Clause A

This Agreement shall be effective as of June 1, 1937, and shall supersede all previous Agreements.

It shall remain in force until May 31, 1939, and shall thereafter renew itself for periods of two years unless or until either party shall notify the other in writing at least sixty days before the end of the initial or any subsequent period of its desire to revise or terminate said agreement.

In Witness Whereof:

We have hereunto affixed our hand and seal this day of Nineteen Hundred and Thirty

Approved:

STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1937

THE following table shows the number of disputes, workers involved, and time loss for May, 1937, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in man working days
*May, 1937.....	44	10,225	56,920
*Apr. 1937.....	38	13,097	148,677
May. 1936.....	14	3,928	28,712

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes".

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

While the number of strikes and lockouts recorded for May was somewhat greater than in April, there were decreases in the numbers of workers involved and in the time loss. In April over sixty per cent of the workers involved and seventy-five per cent of the time loss were due to two prolonged disputes involving large numbers of workers, namely the strike of automobile factory workers at Oshawa, Ont., and that of dress factory workers at Montreal, P.Q. The most important disputes in May were those involving dress factory workers at Montreal (carried over from April), knitting factory workers at Toronto, Ont., and foundry workers at Sorel, P.Q. In May, 1936, the only important strike was that involving loggers and saw and shingle mill workers in Vancouver Island and the adjoining mainland.

Seventeen disputes, involving 4,503 workers, were carried over from April and twenty-seven disputes commenced during May. Of these forty-four disputes, thirty terminated during the month, four resulting in favour of the employers concerned, nine in favour of the workers involved, while compromise settlements were reached in seventeen cases. At the end of May, therefore, there were on record fourteen disputes recorded as strikes or lockouts, namely: fur factory workers, Winnipeg, Man., bottle washers, Toronto, Ont., gold miners, Wells, B.C., coal miners, Inverness, N.S., coal miners, Stellarton, N.S., knitting and spinning factory workers, Kincardine, Ont., clothing factory workers, Sorel, P.Q., tailors, Toronto, Ont., knitting factory workers, Sherbrooke, P.Q., furniture factory workers, Toronto, Ont., automobile castings factory workers, Windsor, Ont., sheet metal workers, Toronto, Ont., carpenters and labourers, Glace Bay, N.S., and highway construction workers, New Glasgow District, N.S.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to seven such disputes, namely: motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; glass factory workers at Hamilton and Wallaceburg, Ont., and Redcliff, Alta., August 19, 1936, one employer; coastwise longshoremen, Vancouver, B.C., November 23, 1936, several employers;

restaurant workers, Toronto, Ont., February 1, 1937, one employer; beverage dispensers, Toronto, Ont., March 4, 1937, one employer; meat packing workers, Edmonton, Alta., April 3, 1937, three employers; and laundry employees, Edmonton, Alta., April 8, 1937, two employers.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistance or allowances for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

An inquiry by a commission into the strikes of meat packing plant employees and laundry workers at Edmonton, Alta., during April was announced by the Minister of Trade and Industry for the province on May 14.

On May 27, as a result of disorders at the time of the strike of wheel factory workers at Windsor, Ont., from December 16 to December 29, 1936, two men were sentenced to imprisonment, one for six months and one for two months, having been convicted by a jury on charges of being members of an unlawful assembly in connection with picketing (LABOUR GAZETTE, January, 1937, p. 21).

A minor dispute involved fourteen employees of a scrap metal dealer at Saint John, N.B., for one and one-half hours on May 10, 1937, their demand for an increase in wages from 20 cents per hour to 25 cents being granted.

A minor dispute involved forty-seven employees of a lime manufacturing establishment at Saint John, N.B., on May 12, 1937, for one hour, an increase in wages from 25 cents-30 cents per hour to 30 cents-35 cents being secured.

A minor dispute involved four or five taxicab drivers at Sudbury, Ont., about May 20, 1937, the men being dismissed as a result of protesting against the employment of drivers from another locality. They were reinstated in a short time.

A minor dispute involved five truck drivers operating their own trucks on a highway construction job near Lindsay, Ont., on May 28. They demanded an increase in wages and, being refused, secured work elsewhere.

A minor dispute involved ten employees in a sawmill at Clayton, Ont., on May 27, 1937, who ceased work when their demand for an increase in wages was refused. They were reported to have been replaced next day.

A minor dispute involved sixteen men in one brush manufacturing establishment at Verdun, P.Q., on May 3, who ceased work when their demand for an increase in wages was refused. Eight returned later in the day and the others were replaced the next morning.

A cessation of work on May 28 by seventy employees in a lumber mill at Crooked River, Sask., demanding an increase in wages to 25 cents per hour, has been reported in the press. Particulars as to this dispute have not yet been received.

A dispute involving coal miners at Florence, N.S., caused stoppages of work on May 17 and May 31. Machine runners, twenty in number, required to work on Sunday nights to prepare for work on Monday asked for an increase in pay for this work and, being refused, did not work on the two Sunday nights so that the mine could not be operated on Monday, indirectly affecting about 650 workers for that day. Negotiations did not result in a settlement, and on Tuesday, June 1, the other miners ceased work for one day in protest against the action of the machine runners.

Disputes by Industries

The following is a review of disputes by industries in which strikes and lockouts occurred during the month, giving particulars as to certain disputes in addition to the information given in the tabular statement.

Mining

Two of the five disputes were carried over from April, namely those involving coal miners at River Hebert and New Waterford in Nova Scotia.

The strike of gold miners in the Cariboo District of British Columbia involved members of the International Mine, Mill and Smelter Workers. Toward the end of May the western representative of the Department of Labour was on the way to the district to bring about a settlement or a reference of the dispute to a Board under the Industrial Disputes Investigation Act.

The coal miners at Inverness objected to a system in force for some time whereby men alternated in working, losing one-third in time, in order to spread employment. They claimed that the provincial government, which has been operating the mine for some years, following the bankruptcy of its former owners, had promised to change the system when the market for coal improved, but the authorities stated that the market was still inadequate. Early in June a resumption of work pending negotiations was reported.

The coal miners at Stellarton, N.S., were demanding the same wage scale as in the principal mines in Nova Scotia. Since 1934

the wage scale has been substantially lower, the mine being in receivership.

Manufacturing

ANIMAL PRODUCTS.—The report of a Commissioner appointed by the provincial government to investigate the strike of meat packers at Vancouver, B.C., commencing in December, 1936, is given elsewhere in this issue with an outline of the dispute.

FUR, LEATHER, ETC.—Judgment in the suit for damages against certain union members entered by one of the employers involved in the strike of fur workers commencing in August, 1936, was rendered on May 6 and is dealt with elsewhere in this issue.

TEXTILES, CLOTHING, ETC.—Two disputes were carried over from April, that of dress factory workers in Montreal, P.Q., and that of knitting factory workers (silk) at Toronto, Ont.

The dispute involving knitting and spinning factory workers at Kincardine, Ont., in two establishments under the same management, was due to the shutting down of the plants on May 4 when three men dismissed for activity in forming a local of the United Textile Workers of America requested the intervention of the Ontario Department of Labour. The employer refused to accept the suggestion of the conciliator that the dismissed men should be reinstated and refused further concilitation. The employees then requested investigation by the Dominion Department of Labour but the employer refused the Minister's offer to send a conciliation officer. The mills were re-opened on May 6 with about one-third of the employees resuming work and by the end of the month it was reported that seventy-five per cent had returned. In connection with picketing towards the end of May some thirty-five persons were tried on charges of vagrancy, intimidation, etc., several being convicted and given suspended sentence.

Two strikes of clothing factory workers, members of the National Catholic Clothing Workers' Union, occurred at Sorel, P.Q., the first being settled on the day it started, when the employer agreed to increase wages and sign an agreement with the union; while the second occurred in the same establishment four days later because the agreement had not been signed.

A strike of custom tailors at Toronto, Ont., against one establishment, occurred on May 20 when the employer refused to negotiate with the union. The union had agreements with twelve out of thirty shops in that part of the city and negotiated agreements with all the others except one, a stoppage of work for one day being arranged for this purpose. At the end of the month a settlement with the remaining employer had not been reported.

The strike of knitting factory workers (silk hosiery) at Sherbrooke, P.Q., commencing on May 29, to secure increases in wages of fifteen to twenty per cent, was unterminated at the end of the month but was settled by conciliation of the provincial Department of Labour on June 2, increases of five to ten per cent being given, a shop committeee to be recognized and working conditions to be adjusted later.

MISCELLANEOUS WOOD PRODUCTS.—One dispute was carried over from April, that involving furniture workers at Hanover, Ont.

The dispute involving box and barrel factory workers at Tavistock, Ont., on May 17 was settled on the same day through the mediation of the local member of the provincial legislature. The employer agreed to recognize a shop committee, to pay time and one-half rates for certain overtime, and to give a graded scale of increases in wages.

A strike of furniture factory workers in eight establishments in Toronto, Ont., on May 25 involved members of the Furniture and Interior Store Fixture Workers' Union, Local 1415 of the United Brotherhood of Carpenters and Joiners of America, to secure an agreement providing for 65 cents per hour for skilled men and 45 cents per hour for unskilled men. The employers refused to agree to minimum rates higher than those specified in the agreement for furniture factories in Ontario under the Industrial Standards Act (LABOUR GAZETTE, April, 1937, p. 457). At the end of May officials of the Ontario Department of Labour were reported to be conferring with the parties involved.

METAL PRODUCTS.—The most important dispute in this industry was the strike of metal workers in three foundries at Sorel, P.Q., on May 1 for a closed shop agreement with the National Catholic Metal Workers' Syndicate. An increase in wages had been given in March and another agreed to for May 1 but the employing firms, under the same management, refused to recognize the union. As a result of ill feeling between the strikers and strike breakers, it was reported that on May 27, following the breaking of windows in the home of the president of the union a number of persons smashed windows in the foundries and in a shipyard plant under the same management and also in the homes of officials of the plants. The disturbers dispersed before the arrival of provincial police and no arrests have been re-

ported. On May 30, as a result of conciliation by the provincial Department of Labour, the management agreed to recognize the union and work was resumed next day. A second strike involving the shipyard as well as the foundries occurred on June 1, the workers claiming that the terms of settlement had not been carried out and strike breakers kept in employment instead of reinstating union workers. This dispute was settled the following day through conciliation by the provincial authorities, it being reported that the management agreed to employ only union members or those who would join the union within fifteen days.

The strike of two hundred workers at Windsor, Ont., in an establishment manufacturing automobile seat springs, from May 11 to May 19, involved members of the United Automobile Workers of America. Negotiations for wage increases, reduced hours, etc., had been broken off when the management refused to recognize the union, claiming that a majority of the employees did not belong to it. The establishment was picketed and about seventy-five employees were reported to have continued to work. About five pickets were reported to have been arrested on charges of intimidation, assault, etc., and twenty-one provincial police were sent to Windsor at the request of the Police Commission. As a result of negotiations between local union officials with the legal representative of the union and the management, participated in by a conciliation officer of the Ontario Department of Labour, a settlement was reached and an agreement signed on May 18. A compromise was reached on wage increases and the nine hour day agreed to with time and one-half rates for overtime, seniority being recognized. On May 27 two of those arrested were convicted of intimidation and fined and one was remanded for trial.

A strike of about one-half of the employees in an establishment at Windsor, Ont., producing castings for automobiles, began on May 13, the strikers being members of the United Automobile Workers' Union of America. The management had refused to negotiate with outside union representatives. The union sought increases in wages, the forty-four hour week and the abolition of piece work. The plant continued production with a reduced staff until May 21 when work was suspended until May 25 and strikers notified to return to work or lose their positions. By May 27 about 150 workers including about twenty new employees were reported to be at work and the management agreed to meet a committee of the strikers. A conference on May 28 did not result in a settlement but it was stated that the only point in dispute was union recognition. The union stated that union members in other establishments would refuse to handle the products of the company. At the end of the month the dispute was unterminated. Early in June it was reported that shipments from the company had been refused in two automobile and parts manufacturing plants. A union representative stated the union would accept recognition of a shop committee as equivalent to union recognition. As a result of further negotiations participated in by a conciliation officer of the Ontario Department of Labour a settlement was reached on June 4, wages being increased and hours reduced.

Construction

BUILDINGS AND STRUCTURES.—The strike of carpenters and labourers at Glace Bay, N.S., on May 1 was due to the demand of the men for wage increases which had been given by other contractors, the employer stating that he could not pay more than the rates prevailing when the contract was taken. Work was suspended. On May 18 a conference of the parties involved called by the Mayor at which he acted as mediator did not result in a settlement.

HIGHWAY.—Labourers and skilled classes of labour on a provincial highway contract west of Toronto ceased work on May 4, their demand for wage increases having been refused. Conciliation officers of the Ontario Department of Labour participated in negotiations on May 6 and following days and it was reported that an agreement was reached as to rates for all classes except labourers who held out for 50 cents per hour, refusing an increase to 40 cents from the 35 cent rate previously paid. It was stated that 50 cents per hour was the municipal rate for labourers in the district. The contract provided for a minimum rate of 35 cents per hour and the eight hour day and required the contractor to hire seventy-five per cent of the workers required fom the locality. The provincial authorities stated that the province was not responsible for the road through these municipalities, that the province had contracted on the improvement to help the unemployment relief situation, and closed down the work on May 14.

The strike of labourers on highway construction near Springhill, N.S., on May 19 was terminated following conciliation by the provincial Deputy Minister of Labour, the men

resuming work on May 21 at eight hours per day pending further negotiations with contractors for the increase in wages demanded, 30 cents per hour instead of 27 cents.

The labourers on highway construction work near New Glasgow, N.S., ceased work on May 27, also demanding an increase from 27 cents per hour to 30 cents on account of the rise in the cost of living. The Attorney-General of Nova Scotia met the parties on May 29 and stated that the contract had been let in the previous autumn at prevailing rates of pay. A settlement was not reached by the end of the month.

STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1937*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(a) Strikes and Lockouts in progress prior to May, 1937				
MINING, ETC.—				
Coal miners, River Hebert, N.S.	1	200	1,800	Alleged lockout commenced April 8, 1937, reduction in wages and for changes in working conditions; negotiations resulted in datal wage increases, terminated May 12.
Coal miners, New Waterford, N.S.	1	34	68	Commenced April 26, 1937, for wage increases; terminated May 3, in favour of employer.
MANUFACTURING—				
Animal Products—				
Meat packing workers, Vancouver, B.C.	1	140	3,000	Commenced Dec. 29, 1936; against discharge of employees claimed to be for union activity; terminated May 26 by negotiations following Royal Commission, compromise.
Fur, Leather, etc.—				
Fur factory workers, Winnipeg, Man.	7	100	2,000	Commenced Aug. 11, 1936; for union agreement, increased wages and 40-hour week; unterminated.
Boots and Shoes—				
Shoe factory workers, Perth, Ont.	1	185	2,000	Commenced April 14, 1937; for increased wages and closed union shop agreement; terminated May 15, by conciliation (Dominion); compromise on wages and agreement.
Textiles, Clothing, etc.—				
Women's clothing factory workers (dressmakers), Montreal, P.Q.	100	2,500	7,500	Commenced April 15, 1937; for union agreement with increased wages and reduced hours; terminated May 7 by conciliation (provincial); agreements signed, hours reduced, wages to be arbitrated.
Knitting factory workers, Toronto, Ont.	1	300	4,100	Commenced April 28, 1937; for union agreement with increased wages; terminated May 20, 1937; employees' committee to be recognized and wages adjusted.
Other Wood Products—				
Furniture factory workers, Hanover, Ont.	1	73	73	Commenced April 7, 1937; against discharge of workers alleged to be for union activity and for recognition of shop committee; terminated May 1 by negotiations, shop committee recognized and men to be reinstated.
Printing and Publishing—				
Commercial artists, Toronto, Ont.	5	85	325	Commenced April 20, 1937; for union agreement with increased wages and reduced hours; terminated May 8 by conciliation (Dominion); union agreement with several firms, compromise on wage increase.
Commercial artists, Toronto, Ont.	1	25	175	Commenced April 29, 1937; sympathy with strike of artists commenced April 20, 1937; terminated May 8, compromise.

STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1937*—*Continued*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks

Furniture factory workers, Toronto, Ont.	8	110	600	Commenced May 25, 1937, for agreement with wage increases, etc.; unterminated.
Metal Products—				
Foundry workers, Sorel, P.Q.	3	300	7,500	Commenced May 1, 1937, for closed union shop agreement and reinstatement of men discharged; terminated by conciliation (provincial) May 30, open shop union agreement, wages to be arbitrated.
Metal factory workers, St. John, N.B.	1	300	2,000	Commenced May 7, 1937, for wage increase and 44-hour week; terminated May 15 by negotiations, compromise, 10 p.c. wage increase and 50-hour week.
Automobile seat spring factory workers, Windsor, Ont.	1	200	1,300	Commenced May 11, 1937, for union recognition, increased wages, reduced hours; terminated May 19, 1937, by conciliation (provincial); compromise.
Automobile castings factory workers, Windsor, Ont.	1	200	3,000	Commenced May 13, 1937, for increased wages, reduced hours and union recognition; unterminated.
Sheet metal workers, Toronto, Ont.	17	85	85	Commenced May 31, 1937; for increased wages; unterminated.
Non-Metallic Minerals—				
Fertilizer factory workers, St. John, N.B.	1	150	225	Commenced May 3, 1937; for increased wages and reduced hours; terminated May 4 by conciliation (provincial) in favour of workers.
CONSTRUCTION—				
Buildings and Structures—				
Carpenters and labourers, Glace Bay, N.S.	1	22	500	Commenced May 1, 1937, for increased wages; unterminated.
Elevator constructors, etc., Montreal, P.Q.	3	60	500	Commenced May 1, 1937, for increased wages; terminated May 12, by negotiations; compromise.
Highway—				
Labourers and cement finishers, New Toronto, Ont.	1	40	400	Commenced May 4, 1937; for increased wages and reduced hours; lapsed by May 15, job closed down.
Highway construction workers, Springhill District, N.S.	1	140	280	Commenced May 20, 1937; for increased wages and reduced hours; terminated May 21 by conciliation (provincial); compromise, hours reduced.

STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1937*—*Concluded*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(b) Strikes and Lockouts commencing during May, 1937—*Concluded*				
Highway construction workers, New Glasgow, N.S.	1	140	420	Commenced May 27, 1937; for increased wages; unterminated.
SERVICE—				
Recreational—				
Caddies (golf), Winnipeg, Man.	1	175	350	Commenced May 22, 1937; against dismissal of workers and for increased wages; terminated May 24, 1937, by negotiations; compromise.
Business and Personal—				
Cleaners and dyers, Toronto, Ont.	1	35	30	Commenced May 11, 1937; for increased wages and reduced hours and union agreement; terminated May 11 by negotiations; compromise, hours reduced, wage increase pending.

*In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

The latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the March issue, in the review of Strikes and Lockouts in Canada and Other Countries, 1936. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

Great Britain

The number of disputes beginning in April was 115 and 11 were still in progress from the previous month, making a total of 126 in progress during the month, involving 79,200 workers with a time loss of 478,000 man working days for the month.

Of the 115 disputes beginning in April, 35 were over demands for increases in wages and 24 were over other wage questions; 6 were over questions of working hours; 25 were over questions respecting the employment of particular classes or persons; 10 were over other matters concerning working conditions; 12 were over questions of trade union principle and 3 disputes were due to sympathetic action.

Final settlements were reached in 90 disputes during April of which 22 were settled in favour of the workers, 39 were settled in favour of the employers and 29 resulted in compromises. In the cases of 10 other disputes, work was resumed pending negotiations.

The strike of London busmen, reported in the May LABOUR GAZETTE, was terminated on May 28 when the busmen returned to work under conditions similar to those prevailing before May 1, when the strike began. The return to work was ordered by the Transport and General Workers' Union, which took over the negotiations from the Central Bus Committee about May 25, after the report of a court of inquiry stated that the men's claims regarding impaired health due to working conditions should be investigated further by a properly qualified body. In ordering the 25,000 men to return to work the secretary of the Transport and General Workers' Union stated that a foundation had been laid "for building up a new and proper structure of agreement and schedule-making for the bus industry."

A dispute over jurisdiction between the Mineworkers' Federation of Great Britain and the Nottinghamshire Miners' Industrial Union threatened to involve the entire coal mining industry of Great Britain in a strike during the

latter part of May. The smaller union had agreed to amalgamate with the Federation but friction arose in regard to the taking back of some workers who had been on strike at a colliery in Harworth, Nottinghamshire, as a result of which the component parts of the Federation gave notice of their intention to call a nation-wide strike. Negotiations between the unions involved, the mine owners and representatives of the government were successful in arranging terms satisfactory to all parties of the Harworth dispute and in completing the amalgamation of the unions, thus removing the threat of the nation-wide strike.

Mexico

On or about May 28, about 17,000 workers in the oil industries of Mexico went on strike demanding a daily minimum wage of $1.70, a forty-hour week, forty-six holidays with pay per year, pensions of from 75 to 100 per cent after 25 to 30 years' service, and free medical care. Under the Mexican law, if in the opinion of the National Labour Board, a strike has been legally called, the employers must pay the strikers while arbitration is being carried on. In the present instance the Board has ruled that the strike was legally called. While negotiations are going forward, the government owned oil company has been supplying gasoline and oil for buses, trucks and in some cases private cars.

United States

Statistics for the year 1936 show that it was characterized by a relatively large number of strikes, which on the average were small as measured in terms of the number of workers involved and resulting time loss. There were 2,172 strikes in 1936—an increase of 8 per cent over 1935, an increase of 17 per cent over 1934 and a larger number than in any year since 1921. The number of workers involved in the 1936 strikes was 788,648—29 per cent less than in 1935 and 46 per cent less than in 1934. The number of man-days of idleness because of strikes in 1936 was 13,901,956, which was 10 per cent less than in 1935 and 29 per cent less than in 1934. (United States Bureau of Labor Statistics, Monthly Labor Review, May 1937.)

The decline in the number of workers involved in 1936 as compared with the two previous years is explained in part by the fact that there were no extremely large strikes during the year, whereas in September, 1935, there was a short but wide-spread strike of 400,000 bituminous coal-miners, and in September, 1934, there was the general textile strike, in which more than 300,000 workers were involved.

The greatest number of strikes in any one industry group was in the textile industries where 455 occurred during 1936. The other industry groups affected by large numbers of strikes were: building and construction, 230; transportation and communication, 165; trade, 164; lumber and allied products, 143; domestic and personal service, 116; and food and kindred products, 106. The industry groups with the largest numbers of workers involved in strikes during the year were: textiles, 128,578; transportation and communication, 83,231; rubber products, 76,699; domestic and personal service 72,246; mining, 56,063; and transportation equipment, 54,049. Nearly 60 per cent of the 1936 time loss occurred in five industry groups: textiles, 2,777,498; transportation and communication, 2,095,435; mining, 1,237,470; lumber and allied products, 1,019,284; and machinery manufacturing industries, 944,720.

In approximately half of the strikes ending in 1936, in which an equal proportion of the workers were involved, the major issues were union recognition, discrimination, or other union organization matters. "Recognition, wages, and hours" was the most common combination of issues. In 35 per cent of the strikes, involving a like proportion of workers, the major issues were wages and hours with demands for wage increases predominating.

Of the 2,156 strikes which ended in 1936, 991 were settled substantially in favour of the workers, 508 were settled by making partial concessions to the workers or by compromises with them; and 592 strikes were settled in favour of the employers. Results in the remaining 65 strikes were indefinite.

Settlements of 43 per cent of the strikes, including about an equal proportion of the workers involved, were negotiated directly by the employers and representatives of the organized workers. In about 30 per cent of the strikes, including 41 per cent of the workers involved, the parties to the dispute were assisted by government conciliators or labour boards, in reaching settlements. In most of these cases the workers were represented by union officials. Private conciliators or arbitrators were instrumental in negotiating settlements of 3 per cent of the strikes.

"Sit-Down" Strikes

The article in the Monthly Labour Review dealing with industrial disputes in 1936 contains a section dealing with the so-called "sit-down" or "stay-in" strikes. In part, it states:—

So called "sit-down" or "stay-in" strikes seem to fall into five groups:—

(1) A stoppage for a few moments or a few hours until a specific grievance is settled, at which time work is resumed.

(2) A stoppage by a group of workers which arouses sentiment for a general walk-out. The general walk-out thereupon develops into a regular picketing strike.

(3) A sit-down for a few hours, when the employer forces the employees out and closes the plant. The dispute thereupon assumes the nature of a lock-out.

(4) A procedure whereby dissatisfied employees report for work each day or shift but sit at their places and refuse to work. They go home at the end of each shift.

(5) A stay-in strike, in which a portion of all of the strikers stay in the plant overnight.

In 48 of the 2,172 strikes which began in 1936, the strikers stayed in the plants for one day or longer after quitting work. In some of these cases, the disputes were settled by the close of the day and work was resumed the following day. In others, workers were ejected or walked out at the close of the shift and set up picket lines around the plants until the disputes were adjusted. In 22 instances the strikers stayed in the building one or more nights. Usually the "stay-in" was only a night or two. Some, however, lasted a week or more. In one case the strikers stayed in the plant for 8 weeks.

Preliminary figures indicate that about 610 strikes began in March, 1937, in which about 265,000 workers were involved. There were 140 strikes which continued into March from preceding months making a total of 750 in progress during the month. About 317,000 workers were involved in these strikes which resulted in 3,820,000 man days of idleness in March. As compared with the previous month, the March figures indicate increases of 165 per cent in the number of strikes, 148 per cent in the number of workers involved, and 121 per cent in time loss.

Since the summer of 1936, the Steel Workers' Organization Committee has been attempting to organize steel industry workers in unions affiliated with the Committee for Industrial Organization. An agreement with the largest company in the industry was signed in March without a strike. On May 12, about 25,000 employees of the Jones and Laughlin Steel Corporation of Pittsburg and Aliquippa, Pennsylvania, ceased work demanding a written collective bargaining contract. The strike was terminated on May 14, when the employers agreed to deal with the union if a referendum under the auspices of the National Labour Relations Board showed that the majority of their employees wished to be represented by the Amalgamated Association of Iron, Steel and Tin Workers of North America, through the Steel Workers Organizing Committee. On May 19, more than 80 per cent of the workers voted for representation by this union. On May 26, about 75,000 employees of five other companies located in Ohio, Illinois, Pennsylvania, Indiana and New York ceased work demanding union recognition. Disorders occurred at several points the most serious being at South Chicago on May 30 when five men were killed and over 75 strikers and policemen were injured. Attempts to reach a settlement in this dispute are still being made.

REPORT OF COMMISSIONER IN DISPUTE BETWEEN BURNS AND COMPANY LIMITED AND EMPLOYEES AT VANCOUVER PLANT

THE report of the Commissioner appointed by the provincial government under the Public Inquiries Act, Mr. Justice J. C. McIntosh of Victoria, to investigate the dispute causing a cessation of work since Dec. 30, 1936, was made public recently.

A number of employees, apparently about 140 out of 280, had ceased work on Dec. 30, following the dismissal on Dec. 29, of 19 employees including the officers and executive of the Meat Cutters and Packing House Employees Union, Federal Local 95. The union claimed that the dismissals were for union activity, and that several had previously been urged by the management to leave the union, whereas the company stated that their services were unsatisfactory. The packing plant and retail stores selling the company's products were picketed.

At the request of the officers of the Trades and Labour Council the western representative of the Department and the Deputy Minister of Labour for British Columbia interviewed the management but were not successful in bringing about a settlement. (Labour Gazette, January 1937, p. 18.) Later a conference called by the Minister of Labour for British Columbia on Jan. 19, did not result in a settlement, and subsequent proposals that the dispute should be referred to a Board under the Industrial Disputes Investigation Act were not successful as the employees would not resume work unless the management would reinstate those dismissed. In the meantime about 100 of the strikers were stated to have been replaced. The appointment of a provincial commission on Feb. 17 followed. After taking evidence from March 17 to March 30, the Commissioner presided at a conference of the representatives of the parties but a settlement was not reached.

Following the publication of the report, the union announced that the recommendations of the Commissioner were acceptable but the company refused to reinstate the strikers, because it would be necessary to discharge many of those working in the establishment for some months. An offer was made

to take the strikers back as there was room for them if the dispute was called off. This offer, however, had not been accepted by the end of the month, but a number of employees returned to work on May 26, and negotiations as to others were reported to be in progress early in June.

The text of the report follows:

Text of Commissioner's Report

To

His Honour,

The Administrator of the Province of British Columbia:

May it please your Honour:

By virtue of the commission issued to me under the Great Seal of the Province to hold an inquiry under the provisions of the Public Inquiries Act into the causes leading up to the labour dispute between Burns & Company Limited and its employees; into the question of what efforts have been made towards settlement of the said dispute; into all matters incident to the foregoing; and to report in writing as soon as conveniently may be after concluding such inquiry, and to include recommendations as to settlement of the dispute in a fair and amicable manner; and such inquiry having been held, no objection having been taken by either party to its jurisdiction or the right to pass upon and adjust the present differences between the parties, it is expedient and in the public interest because of the serious and emergent situation which exists, that immediate effect be given thereto by the instant making and public release of such report and recommendations, which procedure you have graciously approved, and with the consent of the Honourable George S. Pearson, Minister of Labour, the following is submitted.

The situation disclosed is unusual in labour disputes in Canada. No question of wage scale, hours of work or working conditions has arisen or is involved, as all such conditions were and are satisfactory to those affected, but consisted wholly of the activities of the newly formed labour union to which the majority of the employees belonged and the retaliatory reaction of the employing company's manager in relation thereto. Much valuable data was supplied relating to the operations of the company here, the uninterrupted continuity of which is so important to the community, the difficulties which beset those operations, and the contemplated plans for pensions and improved working and social conditions, but such recitals are unnecessary in deciding the main issue as they are merely corollary thereto. It is also considered unnecessary to set forth in detail all the happenings which have taken place, as many were unfortunate and ill advised, and their repetition would only tend to disrupt the avowed desire of both parties to reach a satisfactory conclusion of their differences, aided by the conduct of the employees during a very trying period, which has, generally speaking, been admirable. Several indecisive conferences of an authorized committee of the employees and the management of the company, at the request of your Commissioner, have been held during the inquiry without reaching a satisfactory conclusion. Therefore the real issue only will be dealt with, and the resulting conclusions and recommendations stated.

In April, 1936, a number of the plant employees considered it desirable and in the interest of all, to form a trades union, and in due course a charter was granted to them by the Trades and Labour Congress of Canada, as Meat Cutters and Packing House Employees Union, Federal Local 95, and a constitution was adopted which contained no power for the extension of membership to others than craftsmen. This union was formed with the sole purpose of advancing and protecting the interests of the company's plant employees and meat cutters generally in Vancouver and vicinity, and to improve the conditions of the workers, and with no ulterior motive.

As is usual in such cases, a business agent was appointed in the person, unforunately as it developed, of one confessedly and wholly without experience in trade and union practices, and whose activities outran his discretion and authority as to the union's true objectives. He received from some unknown source the unfortunate and mistaken idea of recruiting owners of retail butcher shops, being employers of labour, in addition to those workmen properly eligible as trade unionists, to extend the membership and to increase his remuneration, and with the object of increasing the force of the union by adding such retailers as members of a section of it, which is foreign to regular trade union practice in the type of employment here involved. This mistake was later recognized and rectified by the formation of a separate and distinct organization by the retail butchers concerned. His activities in this direction were unknown to many members of the union, but must have been known to the members of the executive.

This repugnant affiliation had serious repercussions in the broken relationships of the company and its customers, and was later greatly detrimental to its business operations. The activities of the business agent, the wearing of union buttons by certain employees of the company while at work, and the general activities of the union, so disturbed the manager (only recently appointed and not fully

conversant with local conditions and the personnel of the plant) that in November he had the employees of several departments in the plant brought before him in groups and as individuals, and informed them (among other things) that they must discontinue their union activities or be penalized in the manner described by reliable witnesses; that he would not allow union activities to interfere with or be projected into the business of the company. No complaint was made by the manager of the service rendered by the employees, and an increase in pay was promised and later put into effect. He also informed the employees that they should seek to deal with the company in matters of mutual concern only through the medium of a plant or company union with no outside affiliations, this being the method adopted by most packing plants of consequence in Canada and United States, of bargaining between the employees and employer, functioning in many cases side by side with a local union in such plants.

On December 29, 1936, on instructions of the manager, nineteen employees of the company were discharged, all being members of the union, and including all members of the union's executive and its officials, without assigning any legitimate reason or excuse for such action, although most of these employees had been long with the company and the previous service of most of them satisfactory. These men thus reasonably assumed that they had been dismissed for their union activities and not for unsatisfactory service. The executive of the union thereupon, acting upon the authority vested in them by a resolution of the union previously passed in general meeting, declared a strike of the employees of the company, which action was confirmed the following day by a secret ballot of the members at a general meeting with only three dissenting votes, and was further considered confirmed in January 12, 1937.

Two major mistakes were thus made by the two representatives of the parties, that of the business agent of the union and that of the manager of the company which precipitated the present crisis. The provocation of the union in bringing in as a section of the union the retail butchers, many of whom were customers of the company, was followed by the retaliatory discharge by the company of the nineteen employees without (although not legally necessary) assigning a proper and legitimate reason for such drastic action. The intermingling of those nine employees against whom cause could be assigned, and those ten against whom no cause could be assigned except their activities as executives of their union, left only one implication. The manager must have known and anticipated that his action would culminate in a walkout of the employees, being members of the union.

Both mistakes were grave errors of judgment, made without proper deliberation and thought as to the results. Both parties were equally culpable in the making of them and both are equally responsible for the strike which ensued. The result has been far reaching in its effects, and the community in general as well as the company have suffered from the disruption of normal business relations, and the employees have suffered from the consequent misery and privations of themselves and their families, all established citizens of the community and not transient labour. This unfortunate condition would never have arisen if just consideration had been given to the rights of each by reasonable and deliberate discussion at the proper time. Settlement could have been had if the mediation offered by Government labour officials had been accepted, or by a conciliation board established under the prescribed conditions of the Department of Labour of Canada. The unnecessary loss of employment by the others has happily brought forth the bona fide desire of the parties to effect a fair and reasonable settlement. Both are agreed in principle that the present condition is untenable and should be ended. This can only be accomplished by the agreed return of the employees to their regular employment with the company, and difficulty in reaching such a desired conclusion lies only in the detail to be worked out and followed. This detail is the manner of return, in what numbers and the time for reemployment of the employees affected. There is also the question of the dismissal and disposal of the nineteen employees, members of the union, and of its executive, seemingly dismissed for their union activities, nine of whom, however, it is found were discharged in fact for services unsatisfactory to the company. The situation is complicated by the fact of a number of employees, not members of the union, continuing in their employment, the taking on by the company of new employees in the place of those who left, and the lapse of time since the strike occurred, all making for some difficulty of adjustment. As is usual in such cases the men taken on for the duration of the strike will probably leave of their own accord on settlement being made.

No agreement having been arrived at by the parties, it has been devolved upon your Commissioner to supply a plan of settlement which is possible of application, workable, and effective within a reasonable time.

It is submitted as a reasonable plan for the reinstating in employment of the 131 employees affected, apart from the nine mentioned, that the company shall re-employ 50

of those former employees in April 1937, 41 in May 1937, and the remainder being 40, in June 1937, accelerating the numbers if the opportunity offers, at the scale of wages and working conditions now existing with the following provisos:

(*a*) The selection of such employees shall be by some arrangement agreeable to the parties, married men in any event to be first selected when possible.

(*b*) Upon this settlement being made effective the union shall immediately return the products of the company to the fair list.

(*c*) There shall be no discrimination on the part of the company towards returning employees because of their former union activities.

(*d*) The employees shall have the right to belong to any organization or association of their own choosing, and the company shall recognize a committee elected by all of its employees to represent them in their dealings with the company's management.

(*e*) The nine employees objected to by the company for cause shall have the privilege of appearing before the management of the company and being heard.

It is considered advisable that the President and General Manager of the Company, Mr. John Burns, or his personal representative meet the committee of the union which had been appointed during the negotiations, at the earliest possible date to implement these recommendations. The services of your Commissioner (if required) to be at all times available.

It is not submitted but suggested for obvious reasons, having regard to the future harmony of all concerned, that both the business agent of the union and the manager of the company be transplanted by their respective employers to other fields of endeavour.

It is to be expected that the lessons of the past will so heavily weigh upon the minds of everyone concerned that future disturbances will be carefully avoided by the use of conciliatory methods.

Effective machinery should be provided by the Legislature of the Province for the amelioration of industrial disputes, as the subsisting legislation is sadly inadequate.

A pleasing and satisfactory factor apparent throughout the proceedings was the consistently pacific attitude of Mr. John Burns, President and General Manager of the company, who reached far in friendly advances toward settlement, reminiscent of the late lamented Senator Burns whose just and generous treatment of his employees is still a living memory.

Due recognition is given to the efforts of the Department of Labour of British Columbia through its Minister, Honourable George S. Pearson, its Deputy Minister, Mr. Adam Bell, and the Department of Labour of Canada through its western representative, Mr. F. E. Harrison, to end this complicated dispute.

My personal thanks are due to C. H. Locke, Esquire, K.C. of counsel for the company and to W. W. Lefeaux, Esquire, of counsel for the union, for their unfailing courtesy and their fair and reasonable presentation of the claims of their respective clients, which has proved invaluable.

Occupational-Disease Legislation in the United States

The Bureau of Labor Statistics of the United States Department of Labor has published a bulletin (No. 625) entitled "Occupational-Disease Legislation in the United States, 1936". In a preface to the bulletin, the Commissioner of Labor Statistics states that "One of the most serious flaws of accident compensation systems in the United States is the failure of most State legislation to include injuries due to occupational diseases." The Commissioner points out that at present, the systems in operation in 16 States, as well as those of the Federal Government and of Hawaii, Puerto Rico, and the Phillippine Islands, compensate for at least some types of occupational disease; while a few have a complete coverage. The other 30 States having accident compensation make no such provisions, their laws distinguishing between injuries due to sudden physical violence and those resulting from slow development of disease.

The report deals with the history and development of occupational-disease legislation in the United States. It gives the provisions of existing laws for those jurisdictions where such laws exist.

The United States Employment Service has published two bulletins prepared by the Division of Standards and Research, one entitled "Filling 9 Million Jobs," the other "Who are the Job-Seekers."

For three years the United States Employment Service has been developing a statistical reporting program designed to reflect the activities of the Service and to provide reliable information concerning employment conditions as reflected in the employment offices. The bulletin "Filling 9 Million Jobs" presents an analysis of all registrations received in the two-year period, July 1, 1934—June 30, 1936, and of all placements made during the same period. The national situation is stressed in the analysis referred to. The report states, however, that similar data is available for each State. The report "Who are the Job Seekers" gives an analysis of the occupational and employment characteristics of some 7,800,000 persons actively registered with the employment offices in December, 1935, and approximately 6,600,000 job-seekers in July, 1936.

LEGISLATION IN CANADA CONCERNING OCCUPATIONAL DISEASES

Survey of Regulations of Dominion and Provincial Authorities

"NO really satisfactory definition of occupational disease exists," it was stated by the Committee on Occupational Diseases of the International Labour Conference, 1925, but, for the purpose of this article, the term is used loosely to apply to diseases affecting certain classes of workers, diseases caused by the occupation or the conditions under which the occupation is carried on. An industrial disease, on the other hand, is common to all workers in the industry and not confined to certain occupations but the terms are used interchangeably. While some diseases have been recognized for centuries as occupational in origin, it is only within the last few decades that the regulation of unhealthy trades has been carried out in most industrial countries by scientific methods.

The risks to which workers are exposed vary from one industry to another. During and since the war, in addition to the better known hazards to health arising from harmful conditions of work such as excessive heat or dampness, glare, noise, skin irritation, or nerve or muscle strain due to abnormal position, and from the use of certain substances producing dust, gases, vapours and fumes, often poisonous, there have been added the dangers from poisonous substances used in new industries or in connection with new methods in established industries. Among the newer industries are those producing artificial silk, certain chemicals, rubber goods and electrical apparatus.

On the other hand, the improvement of industrial methods and the introduction of safety devices, better ventilation in workshops and strict rules for collective and individual hygiene can do much to mitigate the harmful effects of operations previously considered as being dangerous or unhealthy.

In older industrial countries, knowledge of occupational diseases has been increased through the adoption of three principal measures: (1) the compulsory notification of such diseases, (2) the organization of medical inspection in industry and (3) their compensation. The reports on the administration of these measures provided a source of steadily increasing information and facilitated the study of certain diseases and the conditions causing them. Subsequent legislation providing for detailed regulation of working conditions in dangerous industries and prohibiting or restricting the use of certain substances has been based on the information thus obtained. Without such information, provisions for the safety and health of industrial workers were necessarily directed to ensuring that young persons entering employment were physically fit and requiring the maintenance of such general hygienic conditions as satisfactory ventilation, temperature and relative freedom from dampness, dust, fumes and so on.

In Canada where industry developed later and where mining and, particularly, manufacturing are of more importance in some provinces than in others, there are fewer statutory regulations with respect to dangerous trades and, except in the matter of compensation for industrial diseases, these are chiefly confined to two or three provinces. Under the provincial Workmen's Compensation Acts, compensation is paid to workmen suffering from certain industrial diseases. In Ontario, since 1932, physicians have been required to report industrial diseases coming to their attention to the Division of Industrial Hygiene of the Department of Health. In none of the other provinces does the law require the notification of such diseases but in Quebec, by an amendment to the Public Health Act in 1928, the Lieutenant-Governor in Council, on the recommendation of the Minister of Health, has power to make regulations respecting the notification of occupational diseases.

As regards medical inspection of industry, there can hardly be said to be any inspection of this kind in Canada. In no Canadian province do medical inspectors form part of the factory inspectorate and there is no regular medical inspection of factories as in Great Britain and several European countries. The services of the provincial health authorities may be called on in special cases and in Ontario there is active co-operation between the Factory Inspection Branch of the Department of Labour and the Division of Industrial Hygiene. In all the provincial factory laws, except that of New Brunswick, there is a section, copied originally from the British Act, permitting the factory inspector to take with him into any factory a qualified physician.

In some large plants a physician is employed for full time; in many others part-time services are provided. Important as industrial health services may be, such voluntary provision by employers for the medical care of their employees, falls outside the limits of this article. It is proposed to set out here what has been done (1) by the Dominion and (2) by the provincial authorities with respect to occupational diseases and hygiene. Only legislative and administrative action by public authorities is dealt with.

DOMINION

In February, 1919, largely as a result of the reports of the Health of Munitions Workers' Committee and of the newly created Industrial Fatigue Research Board in Britain, the Honorary Advisory Council for Scientific and Industrial Research of the Dominion Government established a Committee on Industrial Fatigue. Its purpose was, "in the first place, to consider to what extent fatigue is a factor in industry in Canada and to what extent it calls for scientific investigation; in the second place, to establish means for research if this should seem desirable." The committee of nine members was composed of leading physiologists in the universities, a psychologist, a representative of the Trades and Labour Congress of Canada and one of the Canadian Manufacturers' Association and a woman conversant with the problems of women in industry.

The Committee set up a local bureau in Toronto to collect literature and compile information pertaining to industrial hygiene and decided "to undertake certain investigations into working conditions in Toronto and neighbourhood" under the direction of Dr. J. G. Cunningham, at that time lecturer in industrial hygiene in the University of Toronto. A survey of general conditions in industries in Toronto was accordingly made and the results published in 1921 as No. 7 of the reports of the Honorary Advisory Council for Scientific and Industrial Research. After pointing out the need for research into some specific problem in order to gain the confidence of industry, the report states:—

> In addition to this need of conducting some definite research it is felt that the whole position as regards occupational disease calls for investigation. This should include research into the effects of substances in use with recommendations as to the best preventive measures.

The Committee on Industrial Fatigue requested in 1920 that its name be changed to that of the Committee on Industrial Hygiene but since public health is one of the functions of the Dominion Department of Health which was created in 1920, the Council for Scientific and Industrial Research recommended that the work of the Committee should be taken over by that Department in order to avoid duplication. No action was taken by the Dominion Department but the Provincial Board of Health of Ontario established in the same year a Division of Industrial Hygiene with Dr. J. G. Cunningham as Director.

In 1926, the Dominion Department of Health referred to the National Research Council of Canada (the successor of the Council for Scientific and Industrial Research) the question of the health hazard connected with the spraying of paint by compressed air machines on buildings, railway cars, ships, automobiles, furniture, enamel ware, etc. Action on the matter had been urged for some time by labour organizations. An Associate Committee on Spray Painting, which was appointed by the Research Council, published in 1930 a *Review of Literature dealing with Health Hazards in Spray Painting*. Certain recommendations as regards the ingredients in the paint, ventilation of the operator's booth, masks for operators and the air pressure, were made with a view to lessening the danger. It was recommended, further, that no person under 20 years of age should be engaged as an operator of a paint-spraying machine, that operators should be medically examined to determine their fitness for the work and should be re-examined every three months to ensure against ill effects. Another publication of the Research Council deals with *Health Hazards in the Radium Industry* (1935).

Under the Department of Health Act of 1919 the powers given to the Minister included all matters relating to the health of the people of Canada over which the Dominion Parliament has jurisdiction. The Act provided for co-operation with provincial and other health authorities with a view to the co-ordination of the efforts for improving public health and for the collection and publication of information relating to public health, improved sanitation and the social and industrial conditions affecting the health of the people. The Governor in Council is empowered to make regulations to carry out the provisions of the Act. In explaining certain increases in the estimates for the Department of Pensions and National Health for the fiscal year, 1937-38, the Minister told the House of Commons on January 10, 1937, that it was his intention to appoint to his department an officer to deal with industrial hygiene. He stated:—

> It is proposed to enlarge the sphere of the activities of the Department . . . and to make a further study of industrial hygiene. It is proposed to go in for more publicity and health education. . . It will also give us an opportunity, not to overlap provincial work on industrial hygiene, but of doing what a great many provincial ministers of health asked us to do, of making studies which they require. For instance, there has arisen in the country and in the republic to the south of us a great demand for a further knowledge of silicosis. So far, that has been looked after entirely by the provinces. . . . But if a certain further amount were granted it would be possible for the federal government to give what the doctors are fond of calling "leadership in health" in respect to certain industrial diseases which are common to all the provinces. . .

Accordingly, a division of industrial hygiene has been established in the Dominion Department of Health and it is expected that it will be functioning within a few months.

Two measures taken by the Dominion authorities were designed directly to prevent anthrax and phosphorus poisoning. Both have to do with the importation of articles.

ANTHRAX

An order in council of August 12, 1920, revised on March 12, 1930, protects from anthrax persons whose employment necessitates the handling of wool and hair. These regulations of the Dominion Government made under the authority of the Animal Contagious Diseases Act and requiring certificates from foreign exporters that wool and hair destined for Canada are free from infection, give effect to a Recommendation of the International Labour Conference of 1919.

PHOSPHORUS POISONING

The White Phosphorus Matches Act was enacted in 1914. This action, too, was taken as a result of an international labour conference, a forerunner of the International Labour Conference provided for by the Treaty of Peace. In 1906 at a meeting of the International Association for Labour Legislation at Berne, Switzerland, a convention was drawn up providing for the prohibition of the importation and manufacture of matches made with white phosphorus. Great Britain gave its adherence to the Berne Convention in 1908 and at that time the Secretary of State for the Colonies informed the Governor-General of the Dominion of the action of the British Government and inquired whether the Canadian Government desired to join the United Kingdom in the matter. The Dominion Department of Labour, thereupon, obtained information from the provinces as to the extent of the match-making industry and the need for legislation on the subject. Factories using white phosphorus were found to exist in Nova Scotia, New Brunswick and Quebec and one was starting business in Ontario. A number of deaths from phosphorus poisoning had already occurred in Canada and there were cases of illness due to it. A Bill to implement the Convention was introduced in the House of Commons in November, 1910, and finally passed in May, 1914.

PROVINCIAL

The regulation of workplaces and of employment conditions is, in general, a matter for the provincial authorities and not for the Dominion. Under the Public Health Acts of all the provinces general power is given to the provincial health authorities to inspect workplaces and make regulations regarding them but in all the provinces the inspection of working conditions has been left mainly to the department of government administering labour laws. In Quebec, however, regulations governing industrial establishments have been made by the provincial Bureau of Health. In all the provinces the health authorities are responsible for hygienic conditions in construction, mining and lumbering camps.

Only in Alberta is the prevention of industrial diseases expressly mentioned in the Public Health Act. Since 1919 the Alberta Board of Health has had power to issue regulations for the prevention and remedying of industrial and occupational diseases. No orders appear to have been made under this section, however. In Ontario there is an industrial hygiene branch of the Department of Health.

In Saskatchewan the Public Health Act was amended in 1934 to provide for a Health Services Board which "may advise employers and employees in cities with respect to the establishment of health services for such employees."

Laws providing for the regulation and inspection of mines and factories have been enacted in all provinces but Prince Edward Island. All the Factory Acts contain general provisions as to sanitation and the statutes of British Columbia, Manitoba, Nova Scotia and Saskatchewan stipulate that no person shall keep a factory so that the health of any person is likely to be permanently injured. Except that the word "permanently" is omitted, there is the same requirement in the Alberta and Ontario laws. Under this general stipulation the factory inspectors may determine what conditions are likely to injure the health of any worker.

Two Recommendations of the International Labour Conference have to do with the prevention of industrial diseases through labour inspection. In 1919, a Recommendation was adopted—

> that each member of the International Labour Organization which has not already done so should establish as soon as possible, not only a system of efficient factory inspection, but also in addition thereto a government service especially charged with the duty of safeguarding the health of the workers, which will keep in touch with the International Labour Office.

In 1923, the Conference approved a Recommendation setting out the "general principles which practice shows to be the best calculated to ensure uniform, thorough and effective enforcement. . . of all measures for the protection of the workers," including the functions and powers of inspectors, their qualifications and training and the standard and methods of inspection. The following paragraph of the Recommendation relates directly to the inspection of dangerous trades:

In view of the difficult scientific and technical questions which arise under the conditions of modern industry in connection with processes involving the use of dangerous materials, the removal of injurious dusts and gases, the use of electrical plant and other matters, it is essential that experts having competent medical, engineering, electrical or other scientific training and experience should be employed by the State for dealing with such problems.

It was also recommended that, as far as possible, every establishment should be visited by an inspector for purposes of general inspection at least once a year and that certain establishments including those in which dangerous or unhealthy processes are carried on should be visited much more frequently.

On this latter point, it is interesting to note that the Correspondence Committee on Industrial Hygiene of the International Labour Organziation, which consists of prominent scientists in various industrial countries (and of which Dr. J. G. Cunningham, Director of the Ontario Division of Industrial Hygiene is a member) considered the subject of medical inspection of unhealthy industries with a view to introducing uniformity on this subject in the laws of the different countries. The Committee was of the opinion:—

1. That medical inspection should be carried out by medical factory inspectors or, if such were not available, by doctors appointed by the competent authority.
2. That the industries and callings which in the first place should be subjected to periodical medical inspection should be the following—

Industry	Minimum Periodicity of Visits of Inspection
Manufacture of lead colours and other lead compounds	At least once a month
Mining of lead, zinc, mercury, and their ores	" " " "
Manufacture of storage batteries	" " " "
Manufacture and use of aromatic nitro and amido-derivatives	" " " "
Grinding of basic slag	Every three months
Manufacture of indiarubber, lead processes, carbon bisulphide processes, benzol processes	Every month
Use of lead in the pottery industry	" "
Manufacture of alkaline chromates	" "
Compressed air work	According to special circumstances
Hair cutting	Every three months
Manufacture and use of carbon bisulphide in the manufacture of artificial silk	Every six months
Hot enamelling on metal	Every month
Tinning or zincing of sheet metal by alloys containing lead	Every three months
Chromolithography by powdered colours containing lead	Every month

In all the Canadian provinces except Prince Edward Island there is a Workmen's Compensation Act which includes within its scope persons employed in mines and factories and on construction works. This legislation renders collectively liable for compensation for accidents and certain specified diseases the employers in each group of industries in which they are classified for purposes of assessment. Provision is made also for the prevention of industrial accidents and diseases. In Alberta, British Columbia and Saskatchewan, the Workmen's Compensation Board may make regulations to this end. In New Brunswick, Nova Scotia, Ontario and Quebec, associations of employers, and in Saskatchewan associations of employers and workmen, in any of the classes into which the industries are divided, may make safety rules.

The associations organized in each province under the Workmen's Compensation Act are given financial assistance by the Workmen's Compensation Board. They employ inspectors, distribute posters and pamphlets to their members and while they devote themselves chiefly to the prevention of accidents, in the highly industrialized province of Ontario they are giving increasing attention to the prevention of the better known industrial diseases for which compensation must be paid to workmen. In combating these and, particularly, various forms of industrial poisoning, expert assistance is sought by the employers' associations.

Division of Industrial Hygiene in Ontario

In Ontario, assistance of this kind is given by the Division of Industrial Hygiene which was established in the Department of Health in 1920. The purpose of the Division, as stated in its annual report for 1925, is "to help industry to help itself by reducing the suffering and loss in production caused by ill-health, physical defects and industrial accidents." It set about its task, therefore, by seeking the co-operation of employers and offering its services in the solution of the complicated health problems arising under modern industrial conditions. In 1922 it was noted:—

A small demand has been created among employers and physicians for information on special

problems dealing with health in industry. This phase of the work should grow rapidly now that a beginning has been made.

Since that time there has been a gradual extension of the service to employers as the Division has won their confidence. The report for 1927 states that:

there has been more enquiry regarding physical examination among employees and more plants have instituted this procedure than in any of the eight years previous.

In 1934, a conference of representative foundry men was called by the Department of Health to discuss measures for dust control to prevent silicosis among foundry workers. In the following year, the foundry executives in the Border Cities, organized for accident prevention, instituted health supervision by medical men, including periodic physical examinations of all workers in their plants. At the request of the Ontario Mining Association, examinations to determine the presence of silicosis were made in 1935 of 550 miners who had not a medical examination before being employed in the mines. Other groups of workers who were examined for silicosis or lung fibrosis were employed in the manufacture of sanitary ware, electrical porcelain and china-ware and in talc milling.

Investigations into the occurrence of other occupational diseases and recommendations for their control have been made from time to time by the Division of Industrial Hygiene. Cases may be brought to the attention of the Division by interested physicians, by employers or the Industrial Accident Prevention Associations or by factory inspectors or the Workmen's Compensation Board. Technical assistance has been given "in the diagnosis of occupational diseases, field and laboratory determinations for the identification of dangerous substances and in measures for the control of dust, fumes and other irritants."

Closer co-operation between the Division of Industrial Hygiene and the Department of Labour has resulted from regulations made in 1932 under the Factory, Shop and Office Building Act requiring manufacturers and distributors of benzol or of lead or its compounds for use in any industrial process to label distinctly the containers of these substances. Manufacturers, distributors and employers using substances dangerous to health may be required by the Chief Factory Inspector, on the advice of the Director of the Division of Industrial Hygiene, to display posters indicating to employees the dangers and the precautions necessary for their protection.

Thus, industrial hygiene in Ontario is being promoted through collaboration among the various provincial services concerned with industrial health. In 1932 the Division of Industrial Hygiene reported:—

These arrangements have strengthened the contact with the Factory Inspection Branch. With benzol and lead labelled, inspectors now have a guide which can be followed in the plant to determine the presence of an exposure and its importance. . . . A similar service is available to and used by the Industrial Accident Prevention Associations inspectors so that the two field staffs are served by a small central technical staff for the control of occupational disease.

In 1934,—

an increased number of visits to factories to evaluate occupational hazards has been necessary to meet requests from the Factory Inspection Branch, the Workmen's Compensation Board, the Accident Prevention Associations, physicians and employers or employees, individually or in groups.

Publicity through technical and popular literature and through public addresses has been given by the Division of Industrial Hygiene to the waste from sickness among wage-earners due to lack of industrial hygiene and to suggestions for its prevention or mitigation. Two short bulletins on lead poisoning were issued, one intended for physicians and the other for employers. Other bulletins deal with poisoning from benzol, chromium, hydrogen sulphide and carbon monoxide. A concise manual on occupational diseases was published in 1926 for the use of the medical profession. A revised edition has been issued recently.

Recommendations of Quebec Commission

In 1930, the Quebec Legislature authorized the appointment of a commission to consider "the establishment in this province of a system of social insurance and of a family placement system." Under this statutory authority, the Government appointed a commission with instructions to study, among other matters,

Sanitary conditions of factories and of workers in those factories; occupational illnesses; medical inspection of workmen employed in dangerous tasks; medical attention in the workshop; sanitary education of the worker.

In its fourth report, made in March, 1932, the Commission points out:—

It is imperative at the present time that in factories industrial hygiene should be added to general hygiene . . . . Now the increase in machinery and the expansion of great industrial establishments, along with the field covered by the latter and its repercussions both material and social, have created living conditions which now demand, for the protection of the worker's health, not only doctors who are specialists in hygiene, but those who are specialists in industrial hygiene and who bring an efficient collaboration to the work of industrial hygiene properly so-called, whose direction ought to be in the hands of the Provincial Bureau. These specialists would occupy themselves, among other things, with the periodical medical examination of the workmen, with the effects on their health of cramped and unhealthy working places, with

the handling of poisonous products, the effects of work on the woman and the child and the results of the handling of certain minerals. All of these activities, along with many others, are, in reality, part of the duty of the hygiene specialist who ought to be in a position to propose remedies for unsatisfactory conditions. . .

The Commission recommended,—

that the Lieutenant-Governor in Council draw up regulations concerning industrial hygiene . . . and appoint a competent staff, charged with the application of such regulations.

A division of the industrial hygiene service should be formed within the Provincial Hygiene Service, with a specialized and competent staff, and powers ought to be accorded to it to insure the efficiency of its work.

The chief inspector of industrial establishments and the head doctor of the industrial hygiene service ought to work together for the organization of a necessary collaboration of their services. They ought, if possible, to have their offices in the same city, and to confer regularly every week concerning the work done and concerning the direction to be taken by future work.

The Commission recommends the appointment of a chemist specially attached to the office of the inspection of labour and industrial hygiene. . . .

The work of women and children will be supervised closely by the new hygiene department and will be the object of frequent inspections and repeated medical examinations, especially in the textile industry. The woman who is pregnant should stop work, in certain industries, from the beginning of the eighth month of pregnancy, and continue work only after one month from the date of birth of the child.

Establishments employing a certain number of persons will be required to organize a medical service and infirmary service. As we have said above, in the centres where the arrangement is possible, the small industrial will be grouped in order to share the expenses of a doctor and the service of a nurse.

Sanitary education of the worker, need of which is making itself felt, should be offered by the medical service of the industrial establishments, working with the service of inspection of labour and the department of industrial hygiene.

As a result of the great development of the mining industry in the Province, and of the dangers created by this industry in the matter of hygiene, the new department of industrial hygiene should extend its activities to mines and quarries. . . .

General reference has been made to the provisions of the provincial factory and mining laws and the Workmen's Compensation Acts. More detailed information is given below under the headings, Medical Examination of Workmen, Regulation of Working Conditions, and Compensation for Industrial Diseases. In some cases, this is supplemented by information concerning action taken by the International Labour Conference or the laws in Great Britain or the United States.

Medical Examination of Workmen

Medical examination to determine the physical fitness of persons to take up or to continue employment in certain occupations is the most common method of preventing industrial diseases where general measures to ensure suitable temperature, humidity, ventilation and removal of dust, gases, etc., are not sufficient to remove the hazard and where it is not considered necessary to forbid the use of any dangerous materials that may be used. An examination before beginning work and periodic examinations thereafter are required of persons employed in processes involving the use of dangerous substances. Prohibition or suspension of employment may result if the workman cannot be certified physically fit for the occupation.

Where the susceptibility to certain substances is common to a whole class of workers, as in the case of women to lead, or of young persons to any industrial poison, the employment of all such workers in occupations exposing them to the risk may be forbidden. The exclusion of women or young persons from certain occupations is usually effected by statute while administrative bodies are generally given power to make regulations concerning the working conditions of adult males in dangerous trades and of all workers in processes deemed unhealthy but less hazardous than some.

By a 1921 statute of the United Kingdom, women and young persons under 18 years of age are excluded from certain classes of employment where there is serious danger of lead poisoning and, in processes involving the use of lead compounds, they may be employed only on certain conditions among which is a medical examination once in three months. This statutory requirement is in accordance with a Recommendation of the International Labour Conference in 1919. Since 1891, but more effectively since 1901, the British Home Secretary has had power under the Factory and Workshop Act to make regulations for dangerous trades. The regulations provide for periodic medical examination of all workers in certain occupations. Monthly medical examinations are now required in certain lead processes and in lead smelting, the manufacture of storage batteries, rubber goods, paints and colours, and in processes where nitro and amido derivatives of benzene and chromate and bichromate of potassium or sodium are used. Quarterly examinations are required in vitreous enamelling the tinning of metals and the heading of yarn by means of lead compounds. In the manufacture of certain compounds of lead, a weekly examination is required and workers engaged

in the electrolytic plating or oxidation of metal articles by the use of an electrolyte containing chromic acid or other chromium compounds must be examined every fourteen days. The certifying surgeon may suspend or forbid employment after the examination.

In Canada, Ontario is the only province which has made regulations providing for the medical examination of adult workmen employed in factories other than foundries. Construction workers employed in compressed air, divers and miners or persons employed in ore or rock-crushing are required in some provinces to undergo a physical examination. Such regulations in British Columbia, Ontario and Quebec relate to work in compressed air and in Manitoba, Ontario and Saskatchewan affect certain occupations involving exposure to silica dust.

In 1932, an order in council approved regulations under a new section of the Ontario Factory, Shop and Office Building Act which had been enacted to give the Government power to take steps to prevent industrial diseases. As amended in 1936, the clause expressly applies not only to persons employed in processes involving the use of industrial poisons but to workmen using any dangerous or harmful substance. The regulations were drawn up by the Division of Industrial Hygiene of the Department of Health and the Factory Inspection Branch of the Department of Labour after consultation with representatives of manufacturers of paints, rubber goods, leather, etc. Examinations of workmen by qualified physicians were not made directly compulsory in any industry by the order in council but the Chief Inspector of Factories, on the advice of the Director of the Division of Industrial Hygiene, may require at specified intervals, at the expense of employers, medical examinations of workmen employed at the time of the factory inspector's visit, or within the previous six months, in any industrial process which is considered detrimental to health.

Compressed Air

In Ontario, regulations for the prevention of caisson disease or compressed air illness were made under the Public Health Act in 1926 and assigned to the Department of Labour for enforcement. Similar regulations were issued in Quebec in 1935 under the authority of the Industrial and Commercial Establishments Act.

Under these rules, only men physically fit for the work may be employed. If a workman has had no experience in compressed air, the examination must include a test under pressure in a medical lock before he begins work in a pressure exceeding seventeen pounds and he must be re-examined at the end of the first half-day. If a workman is absent for ten consecutive days, he may not resume work until after an examination. Neither may he be employed continuously for more than two months without an examination.

In British Columbia, similar regulations were laid down in 1933 under the Workmen's Compensation Act. A workman employed as a diver in British Columbia must also undergo a medical examination and, if employed for longer than a month, he must be re-examined and declared fit for the work.

Silicosis

In Ontario, the Mining Act, as amended in 1928 and 1933, requires metal miners, before being employed underground for more than 50 hours a month, to be examined by a medical officer appointed by the Workmen's Compensation Board and certified to be free from diseases of the respiratory organs and fit for such work. Every twelve months during employment they must undergo a medical examination. A certificate of freedom from respiratory diseases is also required of a workman engaged in ore or rock-crushing operations at the surface of a mine unless the ore or rock is crushed in water or in a chemical solution and is kept constantly moist. The chief inspector of mines may exempt from these provisions such mines as do not contain silica in quantities likely to produce silicosis and such as for good and sufficient reason he considers should be exempt. At the present time four examining clinics are operated in Ontario, at Timmins, Kirkland Lake, Sudbury and Fort William. From Kirkland Lake and Fort William travelling clinics serve the miners in the adjoining districts.

Under the Manitoba Mines Act, regulations for the prevention of silicosis similar to those in Ontario were issued in 1928, but it was stipulated that they should not come into effect until proclaimed by the Lieutenant-Governor in Council and no such proclamation was made. In 1931, however, regulations under the Manitoba Public Health Act required a workman employed underground to be examined by a medical officer approved by the Minister of Health and Public Welfare and to hold a certificate that he was fit for work underground. In other particulars, the regulations were similar to those in Ontario. When the Manitoba Public Health Act was revised in 1934, these regulations were reissued and in 1937 they were revised and extended to cover workmen employed in mining or in any occupation in iron, steel, or non-ferrous metal foundries in

which the workmen are exposed to the inhalation of dust containing silica for 50 or more hours a month. Only workmen holding licences granted after medical examination, including the taking of X-ray plates, by a medical officer appointed by the Minister may be employed and a re-examination is required every year. Where such an examination is impracticable a temporary permit valid for six months may be obtained after examination by a medical officer designated by the Minister.

In Saskatchewan, a regulation of 1935 made under the Mines Regulation Act applies to mine employees working in an atmosphere containing rock dust in quantities likely to be injurious to health. Workmen must be examined yearly and none found suffering from silicosis may be permitted to work under conditions tending to aggravate the disease. Where the medical examiner's report shows that silicosis is prevalent in any mine, the chief inspector may require all reasonable measures to be taken to eliminate as far as possible injury to the health of workmen from this source.

In 1929, a Silicosis Act applying to granite workers was passed in Ontario but has not been put into force. This statute provided that any employee engaged in cutting, polishing or finishing granite must be certified physically fit for the work. Employers were to be required to provide such masks and other protective appliances for their workmen as might be approved by the Minister of Health. Regulations might be made under this Act for the better protection of granite workers against silicosis or other industrial diseases and the Act might be extended to include persons employed in cutting, polishing or grinding any stone or substance other than granite.

In 1931, the Quebec Legislature enacted a Silicosis Act like that of Ontario and amended the Quebec Mining Act to include silicosis provisions similar to those in the Ontario Mining Act. In 1933, however, both the Quebec enactments of 1931 were repealed.

YOUNG PERSONS

There appears to be general agreement that young persons are more susceptible to fatigue and industrial diseases than are adults. Accordingly, many countries forbid the employment of young persons in certain hazardous occupations and require periodic examinations of those working in certain other occupations. Frequently, a medical examination is necessary before employment of any kind is permitted.

In Canada, statutory provision is made for the medical examination of young persons before they may be employed at sea and in two provinces, Nova Scotia and Quebec, the law provides for the examination of children in order to ensure their fitness for employment. None of these provisions, however, is designed to prevent any particular industrial disease but merely to safeguard growing children from the fatigue and general risk of employment.

The Canada Shipping Act, 1934, stipulates that any young person under 18 years of age who is employed at sea must have a certificate that he is physically fit for such employment from a qualified medical practitioner. This provision, first enacted in 1924, gives effect to a convention of the International Labour Conference of 1921 which was formally ratified by the Dominion Government on March 31, 1926.

In Nova Scotia, the School Attendance Act, 1915, required that in cities and towns where any child of 13 years of age was exempted from school attendance in order to enter employment, he must obtain a certificate from a school medical officer or other physician as to his fitness for the work. This section of the law, reproduced in the revised Education Act of 1933, now applies to all parts of the province. In the case of towns and cities, its administration is in the hands of local school boards and it appears not to be enforced. Where exemption has been granted to children in rural or village sections, the provincial Education Office has been assured of the physical fitness of the children but no medical examination has been required.

In Quebec, the Industrial Establishments Act, as originally enacted in 1885 and copied from the British factory law, provided for the appointment of "sanitary physicians" to issue age certificates for employed children and to assist in administering the provisions of the Act for ensuring the health of the workers. The present statute stipulates that a new examination of boys under 16 and girls under 18 may, at the request of the factory inspector, be made by one of the sanitary physicians or by any other physician and, upon the advice of such physician, the employee may be discharged as being physically unfit. No sanitary physicians have been appointed, however, since the first appointees died or left the service and this section of the Act seems to be inoperative.

Reference has been made to the Employment of Women and Children (Lead Processes) Act, 1921, in Great Britain which excludes young persons under 18 from certain occupations with a serious risk of lead poisoning and permits their employment, or that of women, in processes in which lead compounds

are used, only on condition that they undergo a medical examination every three months. Under the Factory and Workshop Act, a medical examination must be made of any young person between 14 and 16 years of age within seven days of employment in any factory or in certain classes of workshops.

In the United States, employment certificates are required by forty-four states and the District of Columbia for children under 16 years of age before they may be employed in most kinds of factory work or, in many of these states, before employment in shops or other occupations. In twenty-four states and in the District of Columbia, the employment certificate is conditional on a certificate of physical fitness. In eleven others, the officer issuing the work permits may require medical certificates. Usually re-examination is required upon change of a job. The United States Children's Bureau points out, however, that "in practice physical examinations are seldom sufficiently thorough to prevent children in poor physical condition from going to work."

Regulation of Working Conditions*

As stated above, the factory inspectors of all the provinces but New Brunswick and Quebec are given general powers to require precautions to be taken so that the health of no employee is likely to be injured by conditions in the factory and general requirements as to certain matters are laid down in the factory laws. All the Acts provide that the Lieutenant-Governor in Council may make regulations for the proper carrying out of the Act and in some cases he is expressly authorized to issue orders for the health and safety of the workers. Only in Quebec and Ontario has action been taken under this authority.

In Great Britain, numerous Factory and Workshop Orders have been made by the Home Secretary under the powers granted by the Act for the detailed regulation of unhealthy trades. These include file-cutting, wool sorting and carding, spinning and weaving of hemp and jute, flax and tow, manufacture of paints and colours, pottery, and other trades where lead or lead paint is used, casting of brass, handling of hides and skins, manufacture of rubber and articles wholly or partially of rubber, works where certain chemicals are manufactured, recovered or used, storage batteries, grinding of metals, cutlery and edge tools, handling or crushing of refractory material and the manufacture of silica bricks, chromium plating, asbestos industry, and others.

The Canadian Factory Acts, or in Quebec the regulations, stipulate that industrial establishments must be kept clean, be adequately heated and ventilated and reasonably free from vapours, gases and fumes. In some provinces, the temperature and the number of cubic feet of air space for each worker are specified. In others, there is only a general stipulation on these points. In all the provinces but New Brunswick and Quebec, it is provided that where dust is generated to a dangerous extent, the factory inspector may direct the employer to install mechanical means for removing it. In Quebec, the Act states that factories must be provided with effective means of expelling dust generated in any process and the by-laws of the provincial Board of Health give definite instructions for removing dust, gases and fumes and providing adequate ventilation. The Quebec regulations specify also the degree of humidity to be permitted in cotton mills. The scale of temperature and humidity is the same as that laid down in Britain.

In British Columbia, Manitoba, Nova Scotia, Ontario and Saskatchewan, young persons and women may be forbidden by the inspector to eat meals in a room where a manufacturing process is being carried on. In Alberta and Quebec, this provision applies to all workers. In the former province and in Ontario, no person may take food into any room where paint, varnish, dye, white lead, arsenic or other poisonous substance is exposed or where deleterious fumes, dust or gases are present. The British Factory and Workshop Act prohibits women or young persons taking meals or remaining during the time allowed for meals in certain kinds of factories. In addition, the Home Secretary is empowered to extend the prohibition to other factories or parts of factories where it appears that, by reason of the nature of the process, the taking of meals is specially injurious to health. Orders under this section apply to certain processes in the manufacture of glass, matches, earthenware, chemicals, white lead and textiles and to wool or rag-sorting, fur-pulling, grinding or polishing on a wheel, brass-casting, metal-bronzing and other processes in which dry powder or dust is used.

Printing establishments are expressly dealt with in the Alberta and British Columbia statutes due, no doubt, to the danger of lead poisoning. Where there are three or more type-setting machines, the employer is required to see that the melting pots of all type-setting and type-casting machines and similar apparatus are properly piped and provided with hoods so as to carry off all noxious fumes and gases. The inspector may require

* A Standard Code of Industrial Hygiene was published by the International Labour Office in 1934.

that exhaust fans or other suitable devices be provided also. In Manitoba, Ontario and Saskatchewan, printing offices are classed as factories for the purposes of the Act and the general provisions as to cleanliness and the removal of gases and fumes apply to them.

Foundries are subject to special regulation in Nova Scotia and Quebec. In Nova Scotia, employers in brass, iron and steel foundries must meet certain requirements as to lighting, ventilation, heat, washrooms and lockers for clothing. Smoke, steam and gases must be removed and castings milled and cleaned in rooms not used at the time for other purposes. Under the Quebec Industrial Establishments Act, regulations have been laid down requiring adequate ventilation, heat and washing facilities in foundries. The factory inspector may require that effective devices for expelling dust, fumes or gases be installed. In other provinces there are no special regulations relating to foundries but such establishments are factories under the Acts.

All these provisions have been on the statute-books for some years. More recently, regulations have been made under the factory law of Ontario to lessen the risk from certain industrial poisons and harmful substances.

In Ontario, as mentioned above, special precautions must be taken where lead and its compounds or benzol are prepared or used in any industrial process. It has been noted that containers of benzol or lead or its compounds for industrial use must be clearly labelled by manufacturers or distributors. Lead compounds used only as dryers in the preparation of paint products or paint products prepared for use by brush or dipping process only are not required to be labelled.

In addition, the regulations stipulate that, when required by the Chief Factory Inspector on the advice of the Director of the Division of Industrial Hygiene, manufacturers, distributors and employers using any substances dangerous to health must post notices setting out the dangers and indicating the precautions necessary for the protection of employees. Accurate information must be provided regarding the percentage of the dangerous ingredients when requested by the Chief Factory Inspector or by the Director of the Division of Industrial Hygiene.

In 1935, the Quebec Government made regulations under the Industrial and Commercial Establishments Act for the protection of workers employed in painting buildings. These were revoked, however, by order in council in 1936. The regulations provided that when use was made in painting of "white lead, linseed oil containing lead and any other special product containing white ceruse, saturnine red, salts of lead, white lead or carbonate, hydrate of lead as well as salts of copper," some "antitoxic or antiseptic substances" must be mixed with the paint in sufficient quantities and according to a proper formula "so as to neutralize the effects of lead poisoning." The order was to come into effect when the Minister of Labour gave notice that he had accepted a product or products as satisfactory agents in preventing lead poisoning.

The prevention of lead poisoning was the object of a draft convention approved by the International Labour Conference in 1921. Under the convention, the use of white lead and sulphate of lead and of all products containing these pigments is prohibited in the internal painting of buildings except where it is considered necessary for railway stations or industrial establishments by the authorities after consulting employers' and workers' organizations. White pigments containing a maximum of 2 per cent of lead are permitted to be used and the prohibition does not apply to artistic painting or fine lining. The employment of boys under 18 years of age and of all girls and women is forbidden in any industrial painting involving the use of white lead or sulphate of lead or products containing them. The convention lays down certain principles for the regulation of the use of these substances in operations for which their use is permitted. These include their use only in the form of paste or paint ready for use, safety measures in spray painting and in dry rubbing down and scraping, adequate washing facilities, overalls for workmen, notification of lead poisoning, medical examination of workers and general hygienic instructions to painters.

The International Labour Conference in 1919, "in view of the danger involved to the function of maternity and to the physical development of children," adopted a Recommendation that women and young persons under 18 should be excluded from employment in furnace work in the reduction of zinc or lead ores, or of ashes containing lead, in the desilverizing of lead or in melting lead or old zinc on a large scale, in the manufacture of solder or alloys containing more than 10 per cent of lead, or of litharge, massicot, red lead, white lead, orange lead, or sulphate, chromate or silicate of lead, in mixing or pasting in the manufacture or repair of storage batteries, or in cleaning workrooms where any of these processes are carried on. Where lead compounds are used, women and young persons should be employed only where there is locally applied exhaust ventilation, clean-

liness of tools and workrooms, notification of lead poisoning and compensation therefor, periodic medical examinations, provision of sufficient cloak-room, washing and dining-room accommodation and special protective clothing, and where food may not be brought into workrooms.

Special protection for young persons against unhealthy occupations was provided for in the first factory laws enacted in all the Canadian provinces but Alberta. Except in Quebec no use has been made of this provision which gives the Lieutenant-Governor in Council power to prohibit young persons being employed in occupations deemed dangerous or unhealthy. In the past, this clause has applied to boys under 16 and girls under 18 in all the provinces except New Brunswick. From 1920 to 1937, the age of boys in the New Brunswick section was 14 years but in the new Factories Act the age has been raised to 16 years. In Quebec an Act has just been passed enabling the Government to make regulations for boys and girls under 16 years of age and also for those under 18.

In Quebec regulations were made under the dangerous trades clause in 1890 and revised in 1934. In the latter year, power was given to the Government to prohibit the employment of women as well as of young persons under 18 in establishments deemed to be dangerous or harmful to their health. The orders affecting women and young persons under 18 prohibit their employment in establishments where arsenic, white lead or paris green is used or where iron, brass, lead or zinc is smelted or rolled or where cement, lime, stone or plaster is crushed or where there are fumes from muriatic, nitric or sulphuric acid or from galvanizing iron or where there is vapour from mercury in the plating of mirrors. Boys under 16 or girls under 18 may not be employed in certain occupations including boxing baking powder, cleaning wools, beating carpets, soldering cans, grinding cutlery, dry polishing crystal, iron, brass or horn, polishing marble, mixing and dipping in a match factory, handling iron oxide, sorting rags, varnishing in a rubber works, or tinning wire or sheet iron utensils.

In British Columbia, Ontario, and Quebec, there are regulations for the protection of persons employed in compressed air. These relate to hours of work, the rate of decompression, the proper maintenance of locks, working chambers and gauges, wash and rest rooms, sanitation, ventilation and medical attendance. Work in tunnels and open caissons is also governed by special rules in these provinces and in British Columbia there are regulations protecting men employed as divers.

Compensation for Industrial Diseases

As indicated above, workmen's compensation laws requiring the payment of compensation for certain industrial diseases are in force in all the Canadian provinces except Prince Edward Island. In the Island where fishing and agriculture occupy a large part of the population, railway workers and other Dominion Government employees are provided for in a Dominion statute.

The diseases for which compensation is payable are set out in a schedule to each Act except in New Brunswick but in each province the Workmen's Compensation Board has power to add to the list. In New Brunswick, the Board was given authority to determine by regulation all the diseases to be compensated.

Under all the provincial Workmen's Compensation Acts, compensation is awarded for anthrax and for poisoning by lead, mercury, phosphorus, arsenic or their sequelae. In addition, provision is made in each province for compensation for other diseases peculiar to the industries of the province. The diseases for which compensation is paid are shown below. The scale of cempensation and a summary of the chief provisions of the statutes are given in a mimeographed article on Workmen's Compensation Laws in Canada, which may be obtained from the Department of Labour at Ottawa.

The worker has the right to compensation under all Acts "if the disease is due to the nature of any employment in which he was engaged at any time within twelve months previous to the date of his disablement." In all the provinces but Alberta, however, it is stipulated that compensation shall not be paid "if at the time of entering into the employment he had wilfully and falsely represented himself in writing as not having previously suffered from the disease." Special conditions are laid down with respect to silicosis wherever compensation is made.

A convention of the International Labour Conference of 1925 which was revised in 1934 has to do with compensation for death or disability from occupational diseases. The diseases to be compensated under the convention are anthrax, silicosis, poisoning by lead, mercury, phosphorus and arsenic or their compounds and poisoning by benzene or its homologues or their nitro and amido-derivatives and by the halogen derivatives or hydrocarbons of the aliphatic series, or pathological manifestations due to radium and other radioactive substances or to X-rays, and primary epitheliomatous cancer of the skin. A Recommendation of the Conference is to the effect

that provision should be made for some simple procedure for revising the list of diseases to be compensated.

The industrial diseases for which compensation is payable under the Workmen's Compensation Acts are as follows:—

Anthrax	All provinces.
Arsenic poisoning or its sequelae	All provinces.
Lead poisoning or its sequelae	All provinces.
Mercury poisoning or its sequelae	All provinces.
Phosphorus poisoning or its sequelae	All provinces.
Ammonia poisoning or its sequelae	New Brunswick.
Ankylostomiasis	British Columbia, Manitoba, New Brunswick, Nova Scotia, Ontario, Saskatchewan.
Benzol poisoning	Alberta, Ontario, Quebec, Saskatchewan.
Benzene and its homologues, nitro and amidoderivatives of, poisoning	Alberta, British Columbia.
Brass, zinc or nickel poisoning	Ontario.
Acute bursitis over the elbow (miner's beat elbow)	British Columbia, Nova Scotia, Ontario.
Cancer arising from the manufacture of pitch and tar	Ontario.
Carbon bisulphide poisoning	New Brunswick, Ontario.
Carbon dioxide poisoning	New Brunswick, Ontario.
Carbon monoxide poisoning	Ontario.
Subcutaneous cellulitis over the patella (miner's beat knee)	British Columbia, Nova Scotia.
Subcutaneous cellulitis of the hand (beat hand)	Alberta, British Columbia, Nova Scotia.
Chrome poisoning	Ontario, Quebec.
Compressed air illness	British Columbia, New Brunswick, Ontario, Quebec, Saskatchewan.
Conjunctivitis and retinitis due to electro- and oxy-acetylene welding	Manitoba, Ontario, Saskatchewan.
Dermatitis and infection of skin or contact surfaces due to oils, cutting compounds or lubricants, dust (Alberta only) flour (Saskatchewan only), liquids, fumes, gases or vapours.	Alberta, Saskatchewan.
Dermatitis caused by any process involving the use of or direct contact with acids and alkalies or acids and oils.	Ontario.
Dermatitis caused by cement or red cedar or by handling of copra	British Columbia.
Dermatitis and ulcerations and infections of the skin due to employment carried on by following classes of workers: Abattoir and stockyard workers; boiler washers (steam) bricklayers; cement (Portland) workers; dyers (in clothes cleaning establishments); furriers and fur workers; laundry workers; lime workers; masons; metal platers (including galvanizers and bronzers); plasterers (including lime whitewashers); painters (including paint mixers and French polishers): printers (including engravers, electrotypers and lithographers); tanners (leather including hide-workers).	Manitoba.
Frostbite	Nova Scotia.
Glanders	Alberta, New Brunswick.
Infection from handling sugar	New Brunswick.
Infected blisters from any process involving continuous friction, rubbing or vibration	British Columbia, Ontario.
Inflammation of the synovial lining of the wrist joint and tendon sheaths	Ontario.
Miners' phthisis	Saskatchewan.
Nitrous fumes, poisoning by, or its sequelae	Ontario.
Pneumoconiosis	Ontario, Saskatchewan.
Pneumoconiosis (deemed to be silicosis, siderosis, lithosis)	Alberta.
Silicosis	Ontario, Saskatchewan.
Silicosis due to employment in mining and in iron, steel and metal foundries	Manitoba.
Silicosis due to employment in metal mines or ore or rock-crushing operations	British Columbia.
Stone workers' or grinders' phthisis	Ontario, Saskatchewan.
Sulphur poisoning or its sequelae	British Columbia, New Brunswick.

LABOUR LEGISLATION IN SASKATCHEWAN AND ALBERTA

AT the recent sessions of the Saskatchewan and Alberta Legislatures several outstanding measures of importance to labour were enacted. In Saskatchewan, in addition to amendments to existing labour legislation there was enacted a new law establishing collective labour agreements. Featuring the labour legislation adopted in Alberta during the past session was the Freedom of Trade Union Association Act. There were also a number of amendments to other social measures. The legislation in both provinces is summarized in the following article.

Saskatchewan

Measures of labour interest enacted by the Saskatchewan Legislature during the session which began on February 11 and ended on April 16, 1937, included a new law dealing with collective agreements, and amendments to statutes governing minimum wages, labour contract, workmen's compensation, unemployment relief, weekly half-holiday, mothers' allowances and old age pensions.

Industrial Standards

The Industrial Standards Act is similar in the main to the Ontario statute bearing a like title enacted in 1935. It applies to any business, trade, calling, undertaking, and work, and any branch and combination thereof except mining and agriculture, but does not apply to persons employed by the Provincial Government or by a municipal corporation. The Act is to be administered by the Minister of Municipal Affairs and authority to enforce it and the regulations made under it is given to the Commissioner of Labour who is to be assisted by one or more Industrial Standards officers appointed by the Lieutenant-Governor in Council.

The Minister may designate any part or parts of the province as a zone or zones for purposes of the Act and, upon petition of employers or employees in any industry, may authorize an industrial standards officer to call a conference of employers and employed in such industry for the purpose of investigating labour conditions and practices and negotiating an agreement concerning maximum hours of labour per day and per week, the particular days of the week for the performance of such labour and the periods for, and conditions governing overtime, minimum rates of wages, including overtime rates, and the classes of employees to which any of these matters may apply. If, in the opinion of the minister, a schedule embodying any or all of these points is agreed upon by a proper and sufficient representation of employers and employees, he may approve it and, upon his recommendation, the Lieutenant-Governor in Council may declare it to be binding during pleasure, or for the period not exceeding twelve months stipulated in it, upon all employers and employees in the industry in the designated zone or zones. Schedules are not to become effective until ten days after publication of the Order in Council in the Saskatchewan *Gazette*. When a schedule has been in force for not less than twelve months, a new conference may be held to consider any changes in the schedule. An employer affected by a schedule must keep a copy posted in a conspicuous place.

The Bill as introduced contained a section similar to one included in the Ontario Act in 1935, but replaced in 1937, enabling the minister to inquire into any partnership or association and, if such was being used to defeat the purposes of the Act, to declare any or all members of the association to be employees within the meaning of the Act and regulations. In committee, this section was replaced by one similar to that recently incorporated in the Ontario statute, declaring that every person engaged in any industry shall in so far as he personally performs work in such industry be deemed an employee and in so far as he employs another person or is the proprietor of a business, either alone or in partnership with another, be deemed to be an employer. The Act and regulations and schedules are to be construed accordingly notwithstanding that such person may become both an employer and an employee.

The Minister may set up an advisory board for each zone or group of zones to hear complaints, assist in the enforcement of the Act and regulations and fix special minimum rates of wages for handicapped workers. Such boards are to consist of two representatives nominated by employers and two by employees with a chairman appointed by the Minister. The provision for the inclusion of employers' and workers' representatives was inserted when the Bill was in committee. An appeal may be taken from the decision of an advisory board to the Commissioner of Labour.

In the case of persons to whom the Minimum Wage Act applies, wage rates fixed by a schedule may not be less or hours of labour

greater than those fixed by that Act or the orders made under its authority. The Commissioner may require employers affected by a schedule to keep records showing the names, addresses, and ages of all employees and such information regarding wages, hours and days and conditions of labour as he deems necessary and to produce books, registers, payrolls, and other documents for inspection. The Lieutenant-Governor in Council may make regulations for carrying out the provisions of the Act.

An employer who contravenes the provisions of a schedule is liable, in the case of a first offence, to a fine ranging from $25 to $100 and in default of payment to imprisonment for not more than two months. A subsequent offence is punishable by a fine of from $50 to $500 or in default of payment to imprisonment for not more than six months. In every case he is also to be ordered to pay the difference between the wages fixed by the schedule and the amount actually paid. If the magistrate finds, however, that any employee has participated in the offence he may order such unpaid wages to be paid to the minister for the use of the Province. An employee contravening the provisions of a schedule is liable to a fine of from $5 to $25 and in default of payment to imprisonment for not more than ten days. No prosecution may be instituted without the written consent of the Commissioner.

A section added while the Bill was in committee requires copies of all schedules and regulations made under authority of the Act to be submitted to the Legislature within fifteen days of the opening of the next session.

Wages

Amendments in the Minimum Wage Act, which came into force on May 1, 1937, include a change in the definition of the term "employee" to make it apply expressly to workers whose duties, in whole or in part, are performed outside the shop or factory of the employer but in connection with the operation of the business of the employer. The clause enabling the Minimum Wage Board, with the approval of the Lieutenant-Governor in Council, to extend the provisions of the Act to any class of employees not mentioned in it was repealed but a new section provides that the Board, with the approval of the Lieutenant-Governor in Council, may declare the Act to apply to any building or portion of a building, booth, stall, or place in which any industry, business, trade or occupation is carried on, in which case such building, booth, stall, or place is to be deemed to be a shop for the purposes of the Act.

New powers are conferred on the Board which may now determine who are handicapped, inexperienced, or part-time employees, learners or apprentices, and what number or proportion of the employees in any shop or factory may be part-time employees, and may fix a wage lower than the minimum wage for those classified as handicapped, apprentices, learners, or inexperienced.

The section was amended which deals with the production of copies of orders or regulations in court. Such orders must have endorsed on them a certificate signed by the Secretary of the Minimum Wage Board stating that the copy is a true copy and that the order or regulation was published in the Saskatchewan *Gazette* and came into force on the specified date.

The section fixing penalties to be imposed on an employer violating the Act or any regulation was amended to provide that in case of a second or subsequent offence such employer shall be liable to a fine ranging from $50 to $200 and in default of payment to imprisonment for not less than thirty days or more than three months.

The Workmen's Wage Act, which was designed to prevent the truck system, was amended to permit an employer to deduct from the wages of a workman amounts owing by the workman for goods voluntarily purchased from the employer.

A change in the Masters and Servants Act clarifies the requirement that in order to be valid in law every hiring or contract of service for a period of more than one year must be in writing and signed by the contracting parties.

The section of the Companies Act was amended which provides that a director of a company is not liable for wages of employees or for workmen's compensation assessments unless the company has made an assignment or a receiving order has been made against it or it is being wound up or has been struck off the register. As from May 1, 1937, it is stipulated that the exception in cases of assignments, etc., is limited to assignments made within one year after the debt becomes due.

An amendment, effective May 1, 1937, in the Attachment of Debts Act provides that proceedings by way of garnishee summons to attach wages or salary shall be taken only where the claim of the creditor is upon a judgment. A court or judge, however, if satisfied that the ends of justice will thereby be served, may permit the issue of a summons before judgment and any party affected may move to set aside the summons. In the section dealing with exemption of wages from at-

tachment the definition of "employee" was repealed.

Workmen's Compensation

The Workmen's Compensation (Accident Fund) Act was the subject of a number of amendments. Rail-welders and helpers were added to the classes of railway employees excluded from the operation of the Act unless admitted by the Board upon application of their organization following a majority vote of the members.

The waiting period is reduced from seven days to three as it is in Alberta and Manitoba. If the disability lasts longer than three days no compensation other than medical aid is payable for the first three days. Formerly when disability lasted longer than seven days compensation was payable from the first day. The clause, providing that where the injury is attributable solely to the serious and wilful misconduct of the workman no compensation is payable unless death or serious disability results, was amended to provide that no compensation is payable unless the injury is also permanent.

The Board may now of its own motion refer a case to a medical referee. Formerly this might only be done on application of the employer or the workman.

In case of hernia, the workman is now required to report his condition to his employer within the seven calendar days immediately following the occurrence of the strain or accident. Formerly, he had to report immediately or to cease work and report within seventy-two hours. The clause requiring the workman to submit to an operation for hernia within two weeks of the accident or occurrence was amended to enable the Board to extend the time.

The section which provided that artificial members and apparatus were to be kept in repair for one year was amended to enable artificial limbs and eyes and surgical appliances such as belts, braces, supports and orthopaedic shoes, whether supplied before or after the enactment of the amendment, to be repaired, maintained and renewed as may be necessary by reason of accident or ordinary wear and tear and through no misconduct on the part of the workman.

Another change in the Act makes it necessary for only the chairman, not each member, of the Board to devote all his time to his duties under the Act.

To the schedule of industrial diseases to be compensated were added conjunctivitis and retinitis due to electro or acetylene welding and infection or inflammation of the skin due to employment in any process involving the handling of oils, cutting compounds or lubricants, flour, liquids, fumes, vapours or gases. Dermatitis (venenata) caused by employment in processes involving use of acids, alkalies or acids and oils was removed from the list.

Unemployment Relief

A number of changes in the Direct Relief Act, 1936, which enables the council of a municipality to grant aid to indigents, are retroactive to April 1, 1936, when the principal Act came into force. The clause providing that a minor may acquire a separate residence by being hired and serving for a year for wages was amended to permit any person to acquire residence in such manner. No provision may be made by a municipality for medical or hospital care and treatment of a resident of another municipality without the consent of the council of the latter, except on a medical certificate to the effect that the life or health of the patient will be imperilled by delaying treatment until such consent can be obtained. The Act formerly provided that the Minister of Municipal Affairs might provide for the medical and hospital care of indigent transients. The Minister may now provide such care for any indigent person and may recover the amount spent from the municipality of which such person is a resident. The provisions of the Act governing residence are to apply only to persons making application for relief after March 31, 1936, and not in receipt of relief before that date or within one year immediately preceding the date of such application. The residence of any person who was receiving relief before April 1, 1936, and has continued to receive it or again makes application for relief before the expiration of one year from the date when he last received it, is to be determined in the manner in which residence was determined at the time when such person first applied for relief.

The Municipalities Relief and Agricultural Aid Act and an amendment to the Local Improvement Districts Relief Act provide for further assistance to distressed persons in rural areas including the winter maintenance of live stock and the marketing or disposal of surplus live stock.

Chauffeurs

A section added to the Vehicles Act, and effective from May 1, 1937, provides that upon receipt of a written report that the holder of an operator's or chauffeur's licence is suffering from any physical or mental disease or disability which might prevent him from maintaining control of his vehicle, the Minister may, after investigation, suspend or revoke the licence until he receives a medical certifi-

cate that such person is not suffering from any disability which might cause his driving to be a danger to passengers or the public.

Compulsory Labour for Fighting Forest Fires

The Prairie and Forest Fires Act, which consolidates and amends the law on this subject, empowers any person employed by the Department of Natural Resources to enforce the Act to summon in emergency to fight a forest fire any male person between the ages of eighteen and sixty years. Trainmen, telegraphers and dispatchers on duty, physicians and persons who are physically unfit are exempt. Remuneration for such assistance is to be determined by the Minister of Natural Resources. Any person refusing to obey such summons or leaving a fire before it is extinguished or before he is released by the fire guardian is liable to a fine ranging from $10 to $50 and in default of payment to imprisonment for not more than thirty days. Formerly persons between the ages of sixteen and sixty years were liable for such service and postmasters were included in the list of exempt persons.

Fire Departments—Hours of Labour

The Fire Departments Two-Platoon Act was amended to make it applicable only to cities with a population of 15,000 or over instead of to those of 10,000 or more as formerly.

Weekly Half-holiday

An amendment to the Weekly Half-holiday Act, in force May 1, 1937, provides that in a city in which a half-holiday by-law has been enacted applying to any class of shops and covering the period from April 1 to August 31 or longer the Act shall not apply to that class of shops so long as the by-law remains in force.

Weekly Holiday

The One Day's Rest in Seven Act, which applies only to cities, was amended to exempt from its operation any class of employees in hotels, restaurants and cafés where there are not more than two employees of that class, but such employees are to be entitled to at least two half days' rest in every seven days.

Municipal By-Laws

In the revision of the Town Act and in amendment in the City Act, both effective May 1, 1937, changes were made relating to early closing by-laws. In both cities and towns, such by-laws may now provide that during the period from May 1 to September 30 any class of shops shall be closed on each or any day of the week during any time between 5 p.m. and 5 a.m. of the following day. Where more than one class of trade or business is carried on in a shop and a by-law requires the closing of shops carrying on any class of trade or business carried on in such shop, the shop shall, with respect to that class of trade or business, be closed during the period required by the by-law. When an early closing by-law has been passed, no employer may suffer or permit any employee to be in his shop during the time it is required to be closed, except for one-half hour at the commencement of the period, under penalty not exceeding $25. This provision does not apply, however, where two or more classes of businesses or trades are carried on and the by-law does not apply to all such classes. The provision that no early closing by-law shall be repealed unless more than one-third of the occupants of the class of shops affected are opposed to its continuance, was amended to make it apply only to by-laws passed on petition. The definition of shop does not now include places where the only or principal business carried on is that of a tobacconist, news-agent, hotel, inn, victualling house or refreshment house. The words "or principal" are new. The definition of "closed" in the new Town Act was amended to correspond with that of the City Act and the expression, "serving of customers," includes the receiving of orders from customers. The section of the City Act was repealed which stipulated that the provisions governing by-laws for a weekly half-holiday should not apply to cities within the scope of the Weekly Half-holiday Act.

The clause of the City Act which enabled city councils to pass by-laws prohibiting the delivery of milk by retail before 7 a.m. during the period from November 1 to April 30 was repealed and new provisions substituted under which such by-laws may fix the prohibited hours and may make them applicable during all or any part of the year.

Clauses added to the City Act, the Town Act, the Village Act and the Rural Municipality Act, all of which came into force May 1, 1937, enable councils to pass by-laws licensing, controlling and regulating operators of wood-sawing or wood-cutting machines and enforcing the use of such safety devices and other precautionary measures as may be recommended by the Minister of Municipal Affairs.

Mothers' Allowances and Old Age Pensions

Sections of the Child Welfare Act relating to mothers' allowances were amended as from

May 1, 1937. Changes in wording were made in the section setting out the qualifications for an allowance and it was stipulated that allowances are to be a charge against any land owned by the father or mother or the child.

The Old Age Pension Act was amended by the addition of a section similar to that added to the Child Welfare Act providing that pensions are to be a charge against land owned by the pensioner. In the case of the Old Age Pension Act, the provision is retroactive to the commencement of the Act.

The Urban Municipal Employees Superannuation Act, which will come into force on Proclamation, applies to permanent employees of any city, town, or village except members of the fire department and police force of Saskatoon. The Act provides for a contributory system of pensions administered by a board of three members, one of whom is to be appointed by the municipal council, one by the employees concerned and the third by the Lieutenant-Governor in Council.

Alberta

The 1937 session of the Alberta Legislature opened on February 25, and on April 14 was adjourned to June 7, unless sooner summoned. To date a number of labour laws have been enacted, including a new statute dealing with freedom of association, a revision of the law relating to employment offices, and amendments to Acts governing factories, industrial standards, workmen's compensation, unemployment relief and old age pensions.

Freedom of Association

The Freedom of Trade Union Association Act, which follows the lines of the Bill proposed for enactment in each province by the Trades and Labour Congress of Canada, declares it to be lawful for employees to form themselves into a trade union, which is defined as any association or organization of employees, whether employed by one employer or more, which is formed for the purpose of advancing in a lawful manner the interests of such employees in respect of the terms and conditions of their employment and which is free from undue influence, domination, restraint or interference by employers or associations of employers. The Act also declares it lawful for employees to bargain collectively with their employer or employers and to conduct such bargaining through their trade union and its duly chosen officers. It is made unlawful for an employer to insert any clause in a written contract, or to impose any condition in a verbal contract of employment, or to continue such clause or condition hitherto in effect, which seeks to restrain any employee from exercising his rights under the Act. Any such clause or condition is null and void. An individual employer who intimidates an employee, or threatens an employee or employees generally with loss of employment, or discharges, penalizes or threatens to penalize any employee or employees generally with the object of preventing any employee or employees generally from belonging to a trade union, is liable to a fine not exceeding $100 and costs, for each such offence or, in default of payment, to imprisonment for not more than thirty days. Where the employer is a corporation, the penalty for such offence is a fine not exceeding $1,000. Every person who is a director or the manager of a corporation which commits such an offence is to be deemed to have committed the act unless he proves either that he had no knowledge of it or that he endeavoured to prevent it.

Employment Offices

The Employment Offices Act, 1937, re-enacts the provisions of the 1919 statute bearing the same title but changes the name of the branch of the public service administering it from the Alberta Government Employment Bureau to the Alberta Government Employment Service.

Bureau of Labour

The Bureau of Labour Act, 1922, was repealed. This Act made provision for a bureau consisting of a Commissioner of Labour and other officers to supervise the collection of labour statistics and administer the statutes assigned to it.

Factories

The Factories Act was the subject of a number of amendments some of which were made necessary by the transfer of administration to the Department of Public Works following the abolition of the Bureau of Labour. Provision is made for the appointment of male or female factory inspectors and of a Chief Inspector, the latter taking over the duties hitherto performed by the Commissioner of Labour under the Factories Act. Every inspector is to be furnished with a certificate of appointment which he is required to produce on applying for admission to any premises. The section was repealed which provided that

nothing in the Act should extend to a mechanic, artisan, or labourer repairing machinery in a factory, shop, bake-shop, or office building or to any person temporarily engaged in such repairing. A new section excludes from the scope of the Act shops in which only members of the employer's family are employed.

The clauses which provided that, where a minimum wage had been fixed for female workers in any class of employment, no male worker might be employed in such class at a lower wage were repealed as unnecessary since the enactment of the Male Minimum Wage Act, 1936. The section was also deleted which required wages earned during the first fifteen days of any month to be paid not later than the first Saturday after the fifteenth and wages earned after the fifteenth to be paid not later than the first Saturday of the following month.

The clause enabling the inspector to order installation in a shop or factory of mechanical means of preventing the inhalation of injurious dusts was amended to specify that the inspector may order adequate measures to be taken to prevent such inhalation.

A change in the section requiring dangerous machinery to be guarded makes it apply to shops and office buildings as well as to factories and that requiring inflammable and combustible materials to be stored in a separate building or in a fireproof compartment approved by the inspector was made applicable to office buildings as well as to factories and shops.

The section was repealed which forbade a bake-shop to be kept in a basement or in a part of a building below the street or road level. A similar provision was added to the Bread Act.

Automobile service stations were added to the schedule of establishments to which the Factories Act applies.

Industrial Standards

The Industrial Standards Act which was administered by the Commissioner of Labour was amended to provide for its administration by the Board of Industrial Relations. By a further change any person who wilfully defaults in complying with any order of the Board is made liable to a penalty not exceeding $30 and costs and in default of payment to imprisonment for not more than one month.

Workmen's Compensation

A number of changes were made in the Workmen's Compensation Act (Accident Fund). The Board is given power to acquire such premises as it may consider necessary for purposes of administration and also to administer such Acts and perform such duties as may be assigned to it by Order in Council. The Board may differentiate in its levies as between employers in the same class, having regard to accident cost or accident hazard.

The estimate of wages which has to be made when an employer applies to have himself or members of his family brought within the scope of the Act is now to be made for the current year or balance thereof instead of for the ensuing year as formerly.

The section providing for examination of an injured workman by a medical referee and appointment of an advisory medical board was replaced by new provisions under which the Lieutenant-Governor in Council is authorized to appoint a panel of forty qualified medical practitioners selected equally from the northern and southern portions of the province. From such panel the Workmen's Compensation Board may select medical boards of not less than three members referring to them such cases as it may deem proper. The remuneration of, and necessary expenses incurred by a medical board in the performance of its duties are to be paid out of the Accident Fund. Where a member of the panel has been employed as a medical practitioner in connection with a compensation claim by the employer or workman concerned, he may not act on a medical board in such case. The Workmen's Compensation Board is to notify the workman and employer of the time and place for holding an examination. The medical board is to certify to the Workmen's Compensation Board as to the condition of the workman, his fitness for employment, and if unfit the cause of such unfitness, and the extent of the workman's permanent or temporary disability.

The Board is authorized to replace and repair dentures which are broken by an industrial accident.

Under the section relating to compensation in case of disfigurement, the board may now estimate the impairment of earning capacity from the nature and degree of the remaining disability and award compensation accordingly.

The section relating to industrial diseases was amended to define "silicosis" and to provide that in cases of silicosis, whether contracted before or after the passing of the amendment, the board may extend the time for claiming compensation if it considers the claim is a just one. Compensation is not payable, however, unless the workman has been a resident of Alberta for the five years preceding disablement and has been exposed to silica dust in employment within the province for periods amounting in all to at least five years preceding disablement. Three months of such period must have been in the last

three years before disablement. A further condition is that the workman must not have had silicosis before his exposure to silica dust in employment in Alberta. If he has been exposed to such dust elsewhere before exposure for the specified period in the Province, the amount of compensation is to be reduced by the proportion which the period of exposure outside the Province bears to the total period. A workman who has left his employment must claim compensation within two years. This last provision does not apply, however, to claims made prior to its enactment, April 14, 1937.

Unemployment Relief

The Unemployment Relief Act, 1933, Continuation Act, 1937, stipulates that the 1933 statute shall remain in force until March 31, 1938. The Act which had expired on March 31, 1937, is to be deemed always to have been in effect. It enables the Government of the province to make agreements with the Government of Canada and with municipalities respecting relief measures. Obligations created under the Act prior to March 31, 1937, may be discharged out of the General Revenue Fund, notwithstanding the expiration of the Act on that date.

Drivers of Public and Commercial Vehicles

A clause added to the Vehicles and Highway Traffic Act requires the Provincial Secretary, before issuing a chauffeur's licence, to be satisfied that the applicant, if he is to operate a public service or commercial vehicle, has the medical certificate required for drivers of such vehicles by the regulations issued in 1936 under the Public Service Vehicles Act.

Steam Plants

The Boilers Act was amended to extend its application to include all steam plants, refrigerating plants having a capacity of three tons or over and pressure vessels which are within or subject to the legislative power of the Province. The Act requires the annual registration of pressure vessels and also provides for the appointment of assistant inspectors of boilers and machinery and prescribes their qualifications. The chief engineer of a steam plant is made responsible for any interference with valves, gauges, and other appliances.

Pensions for the Blind

An amendment in the Old Age Pensions Legislation Act enables the Government of the province to take advantage of amendments made this year by the Parliament of Canada to the Old Age Pensions Act extending the provisions of that Act to blind persons forty years of age and over.

Co-operative Associations

The Co-operative Associations Act was revised and amended and its administration transferred to the Department of Trade and Industry.

Wages and Hours of Common Labourers in the U.S.A.

"Entrance Rates and Full-Time Hours of Common Labourers Employed by Cities, September, 1935" is the title of a bulletin (No. 627) prepared by the Division of Wages, Hours and Working Conditions of the United States Department of Labour. The bulletin describes the coverage of the third survey made by the Bureau of Labor Statistics of the entrance rates of pay and full-time hours of work of common laborers employed by cities. The first of these surveys was conducted in 1928 and the second in 1932.

The report states that "for the country as a whole, the average hourly entrance rate in September, 1935, of common labourers employed by cities of 10,000 or more population on street and sewer work was 50·6 cents an hour. The hourly entrance rate of approximately one-tenth (10·6 per cent) of the workers was under 37·5 cents, and half (51·1 per cent) of them earned 37·5 and under 52·5 cents an hour. One-third (33·8 per cent) earned 52·5 and under 72·5 cents, and 4·5 per cent earned 72·5 cents an hour and over.

There was a wide difference in the average hourly entrance rate between the cities of the North and South, the average rate for the northern cities being 53·2 cents as against 32·0 cents for the southern cities. Only 3·0 per cent of common labourers in the North earned less than 32·5 cents an hour, compared with 65·7 per cent in the South.

At the 13th annual meeting of the Montreal and Ottawa Conference of the United Church of Canada held in Montreal recently, it was affirmed that "until adequate measures are taken to abolish unemployment, society is under obligation to provide food, clothing and shelter for those who are unemployed through no fault of their own." A resolution was unanimously adopted declaring that provision of relief must continue to be an obligation of the government, despite alleged abuses, as it was beyond the resources of private charity.

ANNUAL REPORT OF INDUSTRIAL RELATIONS COMMITTEE, CANADIAN MANUFACTURERS' ASSOCIATION

Recommendations Respecting Minimum Wages, Industrial Codes, Apprenticeship and Health Insurance

INCLUDED in the report of the Executive Council of the Canadian Manufacturers' Association, presented at the annual convention held in Toronto recently, was a survey of industrial conditions by the Industrial Relations Committee. This important section of the Canadian Manufacturers' Association dealt with specific phases of the industrial situation in the following paragraphs extracted from its report:—

Minimum Wage and Industrial Codes Legislation

The chief development of the past year under this head, has been the enactment of minimum wage (for men) legislation in Ontario and Quebec, following the industrial standards, or in other words, "standard wage" legislation passed in recent years in the same provinces.

When the Ontario minimum wage bill was introduced, it was decided that representations to the Government should take the form of urging that the bill should be amended so as to make it clear that it was a minimum wage bill, pure and simple, and not a standard wage, or a limitation of hours measure, as the bill, as originally drafted, seemed intended to be. These representations were successful, and the bill was amended so as to make it clear that it is to be interpreted and enforced as a minimum wage act and nothing more. The other point on which strong representations were made was that it was imperative that the Board, which is to administer the act, should have as chairman, a person of independent and judicial character, and that employers and employees should have equal representation. With the bringing down of similar minimum wage (for men) legislation in Quebec, both provinces are now provided with the two systems, namely, minimum wage, and industrial code or standard wage, machinery, and it remains to be seen how the two different systems will work, side by side.

Apprenticeship

The Committee has been giving considerable attention to the question of apprenticeship and the training of young workers from the two points of view of helping to solve the problem of unemployment among young persons, and providing industry with that supply of skilled workers which is so essential to its welfare, and which, at the present time, is anything but assured.

In these circumstances, the Committee is definitely of the opinion that energetic steps should be taken by industry itself, where it has not already been done, to train young workers by means of an apprenticeship or other training scheme. Unless industry itself takes the matter in hand, the Committee feels that pressure might be brought upon governments to pass compulsory legislation, which the Committee does not consider would be in the best interest of industry, or of the young workers themselves.

Another phase of the question to which the Committee has been giving attention, is the relationship between industry and the technical schools, on which so much public money has been spent. Conferences have been held with government educational authorities, and representative technical school principals, with a view to securing the establishment in the technical schools of a standard of training which will be to industry what matriculation is to the university. There is a definite prospect of steps being taken in this direction in the near future by, at least, one of the most important industrial provinces. In the opinion of the Committee, it is of the utmost importance that this movement to link up technical education more closely with industry, and the training of recruits for industrial employment should be supported.

In connection with this question, the Committee has collaborated closely with the so-called Youth Employment Committee, which was set up to act in an advisory capacity to the National Employment Commission, under the chairmanship of Mr. A. B. Purvis. - If, as the result of the work of this Committee, steps should be taken by the Government to facilitate and encourage the use by employers of technical schools, the Committee is of the opinion that everything possible should be done to urge employers to make the fullest use of any facilities which may be offered.

Health Insurance

The Committee has paid particular attention to the first health insurance act to be passed in Canada, namely, that of British Columbia. It will be recalled that the British Columbia Division strongly opposed the bill, when it was before the Legislature, on the ground that

it had not been well thought out, in respect either of its financing or its benefit provisions. Such strong opposition developed before the act was to be brought into effect on the 29th of March last, that the date for bringing it into effect was postponed, and a plebiscite on the question is to be held at the time of the provincial general election on the 1st of June. The Committee is strongly of the opinion that the sound method of procedure in the matter of health insurance is provincial co-operation under Federal supervision, and that it is unwise for a single province to embark on a scheme independently of all the other provinces, and of the Dominion.

International Labour Organization

There has been an unusual amount of activity during the past year in connection with the work of the International Labour Organization. The Committee arranged for the nomination of representatives of the employers of Canada to attend the Special Maritime Conference held last October in Geneva, a Special Tripartite World Textile Conference held in Washington, in April, and the regular Annual International Labour Conference, which is to open at Gevena, on June 3rd. The delegate nominated for the Special Maritime Conference to consider the application of International Labour Conventions to shipping was Mr. A. L. W. MacCallum, Manager of the Shipping Federation of Canada, of Montreal. For the Textile Conference, the delegate nominated was Mr. H. G. Smith, of Mercury Mills Ltd., Hamilton, with Mr. Jackson H. Marx, of Associated Textiles of Canada, Limited, Montreal, Mr. A. V. Young, Hamilton Cotton Company Limited, Hamilton, and Mr. Douglas Hallam, of the Primary Textiles Institute, Toronto, as advisers. For the Annual International Labour Conference to be held this month, Mr. A. R. Goldie, Chairman of the Committee for the past five years, was nominated as delegate, and Mr. H. W. Macdonnell as adviser. The principal items on the agenda are the questions of the forty-hour week in the textile, chemical and printing industries, the planning of public works in relation to employment, and the revision of the existing convention fixing fourteen as the minimum age for the admission of children to industrial employment.

It should also be mentioned that Mr. J. H. Sherrard, of Simmons Limited, of Montreal, a past-president of the Association, attended in February, a meeting of the Governing Body, i.e., the Board of Directors of the International Labour Organization, as substitute for the South African employer, Mr. William Gemmill, in accordance with a rotation agreement that the seat at present occupied by Mr. Gemmill should be treated as a British-Dominion seat, and occupied by the employers of the four British Dominions, in turn.

Unemployment

With a view to giving all possible assistance to the National Employment Commission, under the chairmanship of Mr. A. B. Purvis, of Canadian Industries, Ltd., appointed last year, and to a special sub-committee on youth unemployment, the Committee arranged for the sending out of several questionnaires asking for information as to present employment conditions, the general outlook for the immediate future, the possibility of a shortage of skilled workers, views as to the training of young workers, including the advisability of some kind of apprenticeship system, and suggestions as to how industrial employment could be increased. The information received was summarized and communicated to the National Employment Commission, with which close contact has been maintained by interview and correspondence.

A delegation from the Alberta branch of the Canadian Manufacturers' Association recently interviewed Premier William Aberhart, urging that a committee of three consisting of a judge, one representative from the workers, and the other from employers be appointed to investigate the operations of the Workmen's Compensation Act, instead of the present legislative assembly committee (Labour Gazette, May, 1937, page 480) of nine members. The delegation pointed out that a similar investigation had been conducted in Ontario several years ago by a single member, Mr. Justice Middleton, who was named to make the inquiry in that province.

Relief Appropriation in the U.S.A.

On May 25, the United States House of Representatives approved a relief appropriation of $1,500,000,000, for the fiscal year 1938. However, amendments to the original bill earmarked $505,000,000 for specific purposes as follows: (1) $300,000,000 for the Public Works Administration; (2) $150,000,000 of relief funds for the construction of first and secondary roads in the Federal aid system; (3) $55,000,000 was set aside for flood control and water conservation projects.

Another amendment made ineligible for relief those persons declining jobs in private employment for wages at or above the relief wages prevailing, with a proviso that persons leaving the rolls for private employment could again return if their private employment terminated.

MINIMUM WAGES IN QUEBEC, BRITISH COLUMBIA SASKATCHEWAN AND ALBERTA

Recent Orders of Provincial Boards

Quebec

Included in the *Quebec Official Gazette* of May 22 is the provincial Minimum Wage Board's Order No. 12. This Order, governing the tobacco industry and effective August 1, 1937, replaces previous Orders (No. 12 and 12a) which were in effect since May 1930 (Labour Gazette, May 1930, page 524). The new Order, which is on an entirely different basis than that which it replaces and which designates the work of men in the group, is as follows:

ORDER No. 12.—*tobacco industry, cigars and cigarettes. For the object of this Order and by virtue of Section 6a of the Women's Minimum Wage Act, it is decreed that all operations, other than the heavy handling of the raw product, are considered as female labour; therefore, employees of both sexes are subject to same (except the men who do the heavy handling).*

1. *Minimum:* The following minimum wages apply to tobacco, cigar and cigarette manufacturers, excepting manipulators of Canadian raw leaf tobacco who are covered by Section 1a. The territorial jurisdiction for the purpose of the Present Order shall be:—

Zone 1.—City and Island of Montreal—and a radius of ten (10) miles in a straight line, from the boundaries of the Island:

Experienced Workers:—

After 24 months' experience at the trade, no worker shall be paid less than $12.50 per week.

Apprentices:—

Beginners, not less than $7.00 per week.
